The central figure of this period is Subbi-lulinma, ruler of the Hittite capital in Cappadocia known as the 'City of Hatti,' the modern Boglaz Keui. At the beginning he seems to have been little more than a city-king; but, by nniting the neighbouring States in friendly alliance, and by a series of campaigns in North Syria and northern Mesopotamia, he succeeded in establishing a Hittite Empire, inclinding Syria north of Kadesh on the Orontes, the Mitannian kingdom, and the central portions of Asia Minor. Subbi-luliuma was followed successively by two sons, Arandas and Mursil, both of whom lacked the energetic spirit of their father, to the extent that both Assyria and Egypt made successful campaigns into the Hittite territory. Mursil's son and successor, Mutallu, immediately npon his accession, set about rebuilding the Hat-tian power. His influence may be judged from the array of nations that gathered to his standard: troops from Arinna and Pisidia, Dardanians and Mysians, Lycians and Cataonians, together with contingents from all North Syria, banded together and marched to meet the Egyptians led by Ramses II. Battle was joined at Kadesh on the Orontes. Neither side seems to have been signally victorious. Shortly after, Mutallu was proving and his hortly after. assassinated, and his brother Hattusil fell heir to the throne. This ruler, about the year 1271 B.C., made an offensive and defensive alliance with Ramses II., the terms of which were inscribed on a silver tablet and sent by the Hittite king to Ramses. The treaty is preserved to us in an Egyptian translation engraved on the wall of the temple at Karnak, and another translation, now very fragmentary, in the Ramesseum, as well as in a coneiform tablet from Boghaz Keni, written in the Bab. language.

The rising power of the Assyrians and of the Muski on the north now not only checked any further desire for conquest which the Hittites may have had, but gradually reduced the limits of their Only two further rulers of the Hatti dynasty, Dudhalia and his son Arnuanta, are named in the Boghaz Keui tablets. It is very likely that not long after this the Hittite Empire was dissolved, and before the end of the 8th cent. B.C. the greater part of its territories had been absorbed by

Assyria and Phrygia.

2. Religion.—The chief sources of our knowledge of Hittite religion are the sculptured monuments and seal cylinders, the inscriptions in Assyrian and Egyptian, and the Boghaz Keui tablets. Pending the complete decipherment of the Hittite language,

1 Stela, C. 1, Musée du Louvre. 2 Annals of Thothmes III., 33rd and 41st years. 3 Milleilungen der deutschen Orient-Gesellschaft, xxxv. [Dec.

3 Militeilungen der deutschen Orient-Gesellschaft, xxxv. [Dec. 1907] 1 ff.
4 Contributions towards the decipherment of the Hittite pietographs have been made by J. Halevy, F. Hommel, J. Menant, L. Messersehmidt, and others, while more or less complete systems have been put forward by C. J. Ball, C. R. Conder, P. Jensen, F. E. Peiser, and A. H. Sayce. Only the systems of Sayce and Jensen have received recognition from scholars, and it is now generally considered that the chief value of Jensen's work consists in his excellent list of symbols, and his division of inscriptions into word groups. Sayce's system, on the 'herents. His work began with the essueh as Carchemish, Tyana, appearing in various forms, purely phonetic or partly ideographic. A considerable list of values has thus been formed. Doubtless, many of these values will require modification; but the system seems in the main

HITTITES

While the sculptures these sources are meagre. deal, in the great majority of cases, with representations of deities and scenes from the cult, they afford us at present none of the names of the gods concerned, and in very few instances can the deity be identified and the name supplied from the Assyrian and Egyptian sources. The case is much the same with the carvings on the seal cylinders. A fairly large mass of material is preserved in the later Greeco-Roman writers; but, like the historical material they present for the Nearer East, this can be used with confidence only when checked by the

sources already mentioned.

Primitive animistic conceptions stand out clearly in the historical form of the religion. rivers, trees, and mountains were considered sacred. At Aflatun Bunar, west by south from Iconium, is the familiar monument which stands as the remains of a building, with sculptured front, dedicated to the spirit of the copious fountain which here flows forth. On the shoulder of Mount Argæus, the highest peak in Asia Minor, is another fountain, whose sacred character was marked in Hittite times by a spring house with an inscription, parts of which remain. The tetrastyle temple, which is a feature of some of the Argæus coins, may have stood on the same spot; and that the sanctity of the place was transmitted to later times is evidenced by the discovery, in the same place, of the remains of a Christian church or chapel. High up in the Anti-Taurus range above Comana Aurea, and near the small village of Qoqar Quyu, is a lion monument with Hittite inscription, which owes its position, no doubt, to the sacred character of the monntain. The peak of Argæus likewise was considered sacred, and further evidence is furnished by the representation in various instances of deities standing on mountain tops. Moreover, the treaty of Hattusil with Ramses II. mentions 'the Lady of mountains and rivers.' The sacred tree appears in one perfectly preserved sculpture from Sakje-Geuzi, and it is perhaps used as a symbol in the interior. in the inscriptions.

However, in the period represented in the Hittite monnments, the religious belief of the people had long passed the primitive stage. Animals were still used as emblems, and the people may have continued to believe in the sacred character of springs, mountains, and trees; but a higher plane had been reached, and we may believe that the religion stood on about the same level as that of Babylonia before the time of the first dynasty of Babylon. The selective processes of time had exalted a comparatively small number of the primitive Nature-spirits into gods directly concerned with the welfare of the people; and these had taken on anthropo-morphic forms, assuming the appearance and dress of the Hittites. The distinguishing garb of the male dcity, as seen on the monuments, consists of the short tunic and conical hat; that of the goddess, the long robe and high cylindrical hat. Shoes pointed and turned up at the toes were a feature common to the dress of both. The Hittite artist, as a rule, made no attempt to differentiate the deities through varied portraiture, but relied in

deities through varied portraiture, but relied in well grounded, notwithstanding the fact that translations of connected passages are not altogether satisfactory. The chief obstacle to further advance is lack of well-preserved inscriptions, though new material is constantly coming to light. It is confidently expected that the Hittite language will be recovered in great part from the cuneiform material discovered by H. Winckler at Boghaz Keni, which is now being investigated by Ernst Weidner of Berlin. The grammatical structure of the language and a considerable vocabulary once determined, the complete decipherment of the hieroglyphic inscriptions will shortly follow (cf. P. Jensen, Hittiter und Armenier, Strasburg, 1893; L. Messerschmidt, 'Bemerkungen zu den hethitischen Inschriften,' MVG, 1893, p. 1791.; A. H. Sayee, 'Hittite Inscriptions,' PSBA, 1907, pp. 207-213, 253-250).

1 Olmstead, Charles, and Wrench, Travels and Studies in the Nearer East, vol. 1 pt. 2, figs. 27-29.

this matter on accessaries such as insignia, arms. or totemistic emblems. In many cases the name also is appended, so that to one who knew the native writing there need be no uncertainty.

The status of the Hittite religion in the early period was much the same as that of religion in early Babylonia. Each city-State had its own gods worshipped in the local temple or temples; and this situation seems, as in Babylonia, to have continued to the end of Hittite history, notwithstanding the later establishment of a pantheon. Predominant among these city deities seem to have been some of the local forms of the Mother-goddess and of the storm-god. The former, as the personification of the productive forces, and, in connexion with her son, of the reproductive forces of Nature, was always a favourite with the Hittite peoples, as with the later races who occupied Asia Minor; and it is not surprising that a land so favourable to this cult should at a later time prove such fertile soil for the development of the cult of Virgin and Son. Among male deities, the storm-god, who seems to have been the tutelary deity of the armies, was the favourite. When, therefore, with the formation of an empire, a well-defined imperial pantheon was established, it was but natural that this pair should stand at the head; and thus we find them represented in the sacred gallery of Yazyly Qaya,1 the holy place of the city of the Hatti.

Although in the enumeration of the Hittite gods preserved in the famous treaty the sun-god is mentioned first, the storm-god seems actually to have held the foremost place in the panthcon. From a perusal of the list in the treaty it is evident that the native translator has made a rather unsatisfactory attempt to render it into intelligible Egyptian. As the sun-god, if actually a native deity, appears to have received scant recognition among the Hittites in general, his appearance at the head of the list would seem to demand ex-planation. Three explanations suggest them. sclves: (1) the native translator considered the Mother-goddess a solar deity, and, unable or unwilling to conceive of such a deity as feminine, identified her with the sun-god, lord of heaven; (2) the Hatti themselves, as a concession to Egypt, may have placed the solar deity, as an adopted god, at the head of the list; (3) the Hittite king, whose emblem is formed in part by the winged solar disk, may himself be the sun-god referred

The chief male member of the pantheon, then was the storm-god. He was known in the capital as Teshub-a name common also among the Mitannians and Haldians as the designation of important local storm-gods. He corresponds closely to the West Semitic and Babylonian god Adad. Representations of him vary considerably, but he generally bears in one hand his distinctive weapon, the three-pronged thunderbolt. His most characteris the clothed in the typical dress of the male deity, and bears the bow and thunderbolt as weapons. He stands on a bull, whose roaring, apparently represented by a line drawn from his mouth to the thunderbolt held in the god's hand, is a fit emblem of the thunder, while from the horns issue flames, typical of the lightning. In horns issue flames, typical of the lightning. In the procession in the sacred gallery at Boghaz Keui his weapons are the trident and mace, and he is borne on the necks or shoulders of two men, possibly priests; while in the Zinjerli sculpture he is a bearded god armed with trident, hammer, and dagger, and does not support bull or priest. The monument at Isbekjür, on which he stands

<sup>1</sup> Garstang, op. cil., pls. lxiv.-lxxi. 2 Olmstead, Charles, and Wrench, op. cil., fig. 41. 3 Ib. fig. 33.

on a charging hull, may be taken as depicting the

god in action.

The name of the Great Mother is not yet determined, though it seems likely that the original Cappadocian form was something like Ma—the name under which she was worshipped later at Perhaps the most satisfactory repre-Comana. sentation of her is that in the sacred procession at Boghaz Keui. Her skirt is here pleated and provided with a train. Her hair falls in a long braid, and on her head is the 'mural crown.' has no weapons, hut hears in her left hand her peculiar symbol and in her right a staff. The totemistic emhlem on which she stands is the lioness or panther. Her son, who follows her in the procession, is a heardless youth in the typical masculine dress, bearing in one hand a staff, and in the other a double axe, while a dagger rests in its sheath at his belt. The animal on which he stands is the same as that of his mother. Hattian designation has not heen determined, though he was known in the West as Attis. A similar deity of fertility, perhaps Sandan or a local form of the son of the Great Mother, is the hearded god in the Ivriz sculpture, carved near a copious spring. He holds in his right hand a cluster of grapes and in his left the heads of several stalks of grain. That he is not a god of the harvest or a Bacchus is evident from the fact that hoth grain and grapes are seen to be still attached to growing stalk and stock. A reminiscence of this or a similar early god still lingers in Damascus in a tradition, reported hy J. E. Hanauer,<sup>2</sup> of a steel idol representing the deity who guaranteed the erops, holding in one hand, as a symbol of his function, a cluster of grapes, and in the other function, a cluster of grapes, and, in the other, stalks and ears of wheat and harley.

The numerous other deities, male and female, in the sacred procession, like the majority of divinities pictured by the Hittites, cannot at present he identified. Prominent among them may be mentioned a mountain-god who stands hehind Teshub, the two goddesses of the double-headed eagle, and a grotesque figure with human head, body formed of lions, and lower extremities replaced by the

blade of a dirk or dagger.

Among other deities who seem to be native, but of whom little more than the name is known, may be mentioned Hipa, Sallu, Tarqu or Tarhu, and Tilla, most of whom appear only in personal

Though each city had its tutelary deities and the Empire its pantheon, there was no hesitancy in recognizing and adopting foreign gods; and as a result native and foreign deities are often so associated that, in the present state of our knowledge concerning such religious systems as the Phonician and the Assyrian, it is difficult, and at times impossible, to assign a god to his rightful people. Ashur (or Ashir) appears frequently in personal names in the so-called Cappadocian tablets; and, notwithstanding the rôle he played as chief Assyrian god, his origin is hy no means certain. Ishhara is mentioned in the treaty with Egypt as a Hittite goddess, and her name appears on the Indilimma bilingual, hut she may have been adopted from a neighbouring people. A Hittite Reshpu is mentioned in the Egyptian records, but this also is a Phænician and Aramæan deity

Perhaps the most remarkable element in this complex of divinities connected with the Hittites is represented hy four names of Mitannian gods found on one of the Boghaz Kcui tablets:5 mi-it-

ra-as-si-il, u-ru-w-na-as-si-cl, in-da-ra, na-sa-at-tiia-an-na; that is, Mithra, Varuna, Indra, and perhaps Nāsatya, the 'Twins.' An attempt to discuss this interesting admixture would be premature, but it clearly shows some very close connexion between the Hittite culture and that of the Aryans of India, possibly the addition to the Western people of a fresh stratum of population, representing a migration during the middle of tho

second millennium. We shall doubtless find, when the tangled mass of Asiatic religious ideas is understood, that the Hittite religion contributed in no small degree to the later classical mythology. Two of the scnlptured blocks dug from the mound of Arslan Tepe near Malatia contain a scene which reminds us forcibly of a classical myth. One block contains the figures of two gods in ornate pointed caps and the ordinary short tunics. One of these, a bearded god, bears a dagger, club, and lance. He is preceded by a beardless figure who seems to be comhating with his lance a many headed serpent coiled in the water. The scene is not complete, but several of the serpent's heads with open mouths and fangs ready to strike are clearly discernible. This may prove to he the prototype of Hercules'

slaying of the hydra, assisted by his friend Iolaus. The sanctity of Mount Argaeus from Hittite The sanctity of Mount Argues to Christian times is well attested. Moreover, Argaios is a title of Zeus in Cappadoeia, and Argeus is known from Maximus of Tyre to have been a god as well as a mountain. This god Argens, then, must be identified with the Apollolike deity represented on the Argens coins, who was doubtless originally the Hittite god of this mountain. It is interesting to note that in this instance the myth seems to have come down to the present day; for we must see in the modern legend to the effect that Ali Dagh, the cone shaped mountain below Argeus, was formed by a basket-ful of earth which fell here as the result of the hreaking of Ali's basket an adaptation of an earlier legend in which the god Argæus was tho

It is very possible that the sources of the Amazon stories will also he found among the Hittites, perhaps suggested to the story-teller of later times by a vague tradition of some rite connected with the cult of the Mother-goddess, or by an actual war-ring hand of women. The possibility of this source is suggested by the discovery of an armed lady sculptured on a post of one of the gates of the Boghaz Keui fortifications.

The figure,2 which is one of the hest examples of Hittite art, is that of a woman with short skirt, girdle, coat of fine mail, and the pointed hat adorned with horns, her dress thus closely resemhling that of the male deities. The lady's arms are the single-bitted axe, which she bears in her right hand, and the dagger, which rests in a sheath attached to her belt. While the figure is of great interest in its suggestion of a possible eonnexion with the Amazon legends, too much stress must not he laid upon this theory. It is more natural to suppose that the sculpture represents a Hittite Athene, and that she stands here

as the guardian of gate and city.
3. Death, etc.—The common method of hurial among the Hittites seems to have been interment in large jars after a partial cremation of the hodies. In 1907 a mound was discovered by the Cornell Expedition in the plain south of Mount Argaus, at the hamlet of Egri Keui, which was used as a cemetery and seemingly also as a crematory. Here were found human bones, fragments of large jars, some of them painted ware, and pieces of charred

HITTITES

wood. This and the further discovery of such jarburial at the pre-classical Iconium as well as at Carehemish would indicate that this was the chief incthod. That other methods were in vogue is suggested by the discovery, made by the Cornell Expedition, of an instance of cist-burial at Sevinjik in Lycaonia south of Ilghin, the grave in this case containing a small earthen pot unmistakably Hittite in type. Persons of note, however, were interred in mounds built in a conspicuous spot, such as the summit or shoulder of a mountain. Whether the manner of interment was the same as in mounds further west is not known, as no tumulus definitely shown to be Hittite has been investigated.

It is to be expected that a people so favourable to the cult of the Mother-goddess who yearly revivified Nature should have a steadfast belief in a life after death. Strangely enough, none of the larger monuments sheds any light on the subject. Several most interesting seal cylinders, however, though showing strong Babylonian and Egyptian influence, may be taken as pictures of the Hittite lower world. In these the deity who judges the dead sits in a high-backed chair, and the soul of the departed is brought before him by an attendant with two faces, one of which he turns towards the judge, while with the other he watches the deceased. Three figures following the dead suggest the three assessors, Minos, Æacus, and Rhadamanthus, associated by the Greeks with Pluto, and indicate one more line of connexion between pre-Hellenie Greece and Asia Minor. Other scenes on the cylinders represent the dead partaking of food, some of which is furnished by kindly niousters; and in one place 2 we seem to have a cremation scene.

4. Status of woman.—From the prominence of the Great Mother cult as well as from the importance of other female deities in the pantheon, it was natural to conclude that the status of woman among the Hittite peoples must have been comparatively high. This conclusion is confirmed by the records. Whether monogamy was the rule is uncertain, but it is interesting to note that, when Subbi-luliuma supported Mattiuaza as heir to the throne of the Mitanni land, he conditioned his support on a monogamous marriage of the Mitannian prince with a princess of Hatti. The high position of woman is shown further by the importance of the queen as chief priestess alongside the priest-king, as well as by her prominence in State affairs, as evidenced by her seal affixed to treaties and royal edicts. A similar position of importance was held by the queen-mother, whose scal also appears on such documents; and one queen mother of the Hatti dynasty, Putu-hipa, is mentioned as co-ruler, and later as regent, during a short interregnum.

5. Cultus.—In the course of the excavations at Boghaz Keui, the foundations of four buildings which seem to have been temples were laid bare, three in the upper city and one on a lower terrace. The last mentioned is the site where a portion of the collection of euneiform tablets was unearthed. The foundations of all four temples are massive, and in their plan and construction have features in common with buildings excavated at Cnossos, Tiryns, and Mycenæ. The lower temple, which Winckler considers to have been the sanctuary of Teshub, consists in the main of a large rectangular court, with entrance from the south, opening northward through a hall of columns or pillars into the adyton, another rectangular room at the north side of which stands an immense basis, undoubtedly the pedestal of the god's statue. Added

Ward, Seal Cylinders, nos. 854-860.
 Ib. no. 857.

to this main plan is a system of long, narrow chambers, which served as magazines for the stores and accessaries of the temple; and the whole is surrounded by paved streets. Only the foundations of the temple complex remain. These consist of massive squared blocks of limestone forming a socle about a metre high, the upper surface of which is provided with rows of holes, doubtless designed for the reception of long poles supporting the clay superstructure. The three buildings in the upper city have a similar plan and structure, though the construction is not so massive. It is of interest to note in this connexion that the Anu-Adad temple at Ashur in Assyria shows a distinct departure from the usual Bab. type, revealing features which may prove to be Hittite.\(^1\)

Very little of the eult can be reconstructed from the monuments. These clearly show that libation and animal-sacrifice played an important part, the victims, so far as we can judgo from the sculptures, being sheep and goats. The king or queen is represented in various instances as standing before the deity pouring a libation with a high one-handled pitcher, the stream from which, in some cases, falls into a two-handled urn set on the ground, as in the sculptures at Malatia and Isbekjür.<sup>2</sup> In several scenes of this character an attendant is pictured in the background, leading or holding the sacrificial animal. The Fraktin sculptures show the priest pouring a libation while the offering is on the altar, presumably burning,

6. Divination. — Among the interesting discoveries made at Boghaz Keui was that of a number of elay representations of sheep's livers elosely resembling the Bab. model coming from the time of Hammurabi. This shows clearly that hepatoscopy, introduced from Babylonia, was practised among the Hittites, and we may believe that other forms of divination were adopted at the same time; indeed, it is not at all unlikely, considering the long occupation of these regions of the Nearer East by the Hittites, that this people, whose intercourse with the Ægean races is well attested, transmitted hepatoscopy and astrology to the West.

7. Relation to other civilizations.—Our present knowledge of the Hittites is too meagro to permit a discussion of the mutual interchange of eultural elements between the Hattian and the Assyro-Babylonian eivilizations on the one hand and the Ægean world on the other. That such interchange between Hittites and Assyro-Babylonians occurred, and in no small measure, might, if no other evidence existed, be safely conjectured from the facts that before the end of the third millennium B.C. we find Hittites or Mitannians in control of Assyria, that from very early times Hittites lived peacefully in Babylonia and Assyria, and that in a period possibly as early as 2000 B.C. we find Assyrian names and name-elements in the Cappadocian tablets. We have seen that Bab. divination, in one of its phases at least, was borrowed by the Hittites, and that they were not averse to recognizing Assyro-Babylonian gods. Their greatest debt to the Euphratean eivilization, however, is represented by the cuneiform script, which came to be used in all their commercial and legal transactions as well as in their international correspondence. With every advance in our knowledge of the Hittites it becomes increasingly apparent that these debts were not left unpaid. It scems elear from a study of the monuments and scal eylinders that the Hittites exerted a by no means inconsiderable influence on the architecture, as, for example, in the well-known bit hilani, and on

<sup>1</sup> See W. Andrae, Der Anu-Adad-Tempel in Assur Leipzig, 1909, p. 82 ff.
3 Olmstead, Charles, and Wrench, op. cit., figs. 42 and 34.

HOS 727

the art, a notable example of which is found in the Maltaya sculptures 1 so obviously akin to the processions of gods at Boghaz Keni; while a strong Hittite influence on the religion must be predi-cated from the large number of names of Hittite deities forming a part of the personal names found in the Assyrian business documents.<sup>2</sup> That the Hittites exerted an equally important influence on the peoples of the Ægean cannot be doubted; but how far the constant similarity between the two is due to actual influence and how far to racial identity no one may safely say. These and similar questions which meet one at every stage of the investigations we may raise, but even such general hypotheses will continue to be of doubtful value until we have much more complete collections of material, and especially until the deciphering of the Hittite and allied languages has been accomplished.

ciphcring of the Hittite and allied languages has been accomplished.

LITERATURE.—For the native inscriptions: L. Messerschmidt, 'Corpus Insor. Hettiticarum,' in MVG, Berlin, v. (1900) no. 5. 4. T. Olmstead, B. B. Charies, and J. E. Wrench, Travels and Studies in the Nearer East, vol. 1. pt. 2, Ithaca, 1911. The results of the Boghaz Keui excavations are given by H. Winckler, in OLZ ix. [Leipzig, 1906] 621 fl., and by H. Winckler and O. Puchstein, in Mitteilungen der deutschen Orient-Gesellschaft, xxxv. [Dec. 1907] 1 fl. The hest study of the Hittite-Egyptian treaty is that by W. Max Müller, 'Der Bündnisvertrag Ramses II. und des Chetiterkönigs,' in MVG vli. [Berlin, 1902] 193 fl., and the hest Eng. tr. is to be found in J. H. Breasted's Ancient Records of Egypt. (Chicago, 1906-07), ili. 163 fl. For the history: J. Garstang, The Land of the Hittites, London, 1910: J. H. Breasted, Hist. of Egypt, New York, 1911: G. Maspero, Struggle of the Nations, do. 1897, Passing of the Empires, do. 1900. Ct. for the later period also A. T. Oimstead, Western Asia in the Days of Sargon of Assyria, New York, 1908. For the art and architecture: F. von Luschan, C. Humann, R. Koldewey, and others, Ausgrabungen in Sendschirli, Berlin, ii. (1898), iii. (1902), and iv. (1911); J. Garstang, Land of the Hittites; O. Puchstein, Bauwerke von Boghazköi, Leipzig, 1912. Ct. also Perrot-Chiplez, History of Art in Sardinia, etc., New York, 1890. The scal cylinders are coilected in W. H. Ward, Seal Cylinders of Western Asia, Washington, 1910. The religion is discussed, sometimes in considerable detail, in most of the foregoing works. There is a special study by W. M. Ramsay, Sayce, Ward, and others.

HIUEN TSIANG.—See YUAN CHWANG.

## HIUEN TSIANG .- See YUAN CHWANG.

HOS .- A tribe classed by Risley as Dravidian or non-Aryan, found in the Singhbhum District of the Chota Nagpur Division of Bengal, where, according to the Census of 1901, they number 385,125. The tribal name seems to be a contracted form of the word horo, 'man,' which is used by the cognate Munda and Santal tribes as their national designation, and which appears in various forms in the tribal names Orāon, Kol, Korwā, Korkū, etc. Risley further remarks that the Mundas and

Kisley further remarks that the Mundas and Santals are not called horo by outsiders; and in the case of the Hos, the tribal name of the original stock whence Hos, Mundas, and Santals are sprung has obtained popular recognition, in a slightly altered form, as the distinctive name of the branch which inhabits Singbhum, and which may now be regarded as a separate tribe. For intermarriage between Hos and Mundas or Santals, though not absolutely forbidden hy custom, is certainly uncommon, and may be expected soon to fall into disuse' (TC i. 319 f.).

1. Tribal legends.—The Hos possess a remarkable tradition concerning the creation of the world

able tradition concerning the creation of the world and the origin of the human race, recorded by Tickell (JASB ix. [1841] 797), and thus summarized

by Dalton (Descrip. Ethnol. of Bengal, 185):

'Ote Borām and Sing Bongā were self-created, and they made the earth with rocks and water, and they clothed it with grass and trees, and then created animals, first, those that man domesticates, and, afterwards, wild heasts. When all was prepared for the abode of man, a hoy and girl were created, and sing Bongā placed them in a cave at the hottom of a great

ravine, and finding them to he too innocent to give hopes of progeny, he instructed them in the art of making Illi, rice beer, which excited the passions, and thus the world hecame peopled (cf. Tylor, PC4, London, 1903, ch. xvii.; Lang, in EBr11 xix. 142 fl.). When the first parents had produced twelve hoys and twelve girls, Sing Bonga prepared a feast of buffaloes, hullocks, goats, sheep, pigs, fowls, and vegetables, and, making the brothers and sisters pair off, told each pair to take what they most relished and depart. Then the first and second pair took hullocks' and hufaloes' flesh, and they originated the Kols (Hos) and the Bhūmij (Matkum); the next took vegetables only, and are the progenitors of the Brahmans and Chatris (Skr. Kratriya, the warrior class); others took goats and fish, and from them are the Sūdras [menials in the Hindu caste system]. One pair took shell-fish, and hecame the Bhūrigs [c. 1]; two pair took pigs, and hecame Santāls. One pair to the cher pairs gave them of the transfer in the first the pair thus nt-castes, see ing u Risie Risie A08 ff.]. The Hos have assigned to the English the honour of descent from one of the first two pairs, the elder. The only incident in the above tradition that reminds one of the more highly elahorated Santal account is the divine authority for the use of strong drink' (cf. the legends which attribute the invention of wine to Noah, Dionysus, and Osiris).

From the ethnological point of view this legend is interesting, as it admits the common origin of the forest tribes occupying this region. On the other hand, it is actiological, inasmuch as it purports to explain the present status of these tribes; it is comparatively recent, since it embodies Hindu beliefs; and the account of the origin of the English must be quite modern.

2. Religion.—According to Dalton, the Hos at the present day have no conception of a heaven or hell which may not be traced to Brāhmanical or

Christian teaching.

Christian teaching.

'They have some vague idea that the ghosts of the dead hover ahout, and they make offerings to them; and some have, like the Chinese, an altar in the house on which a portion of the "daily bread" is offered to them; thut, unless under a system of prompting often inadvertently adopted, they will not tell you that this after existence is one of reward or punishment '(op. cit. 204).

Their burial customs certainly indicate a belief that the spirits of the dead abide in the neighbour-hood of their graves. Ball (Jungle Life, 64), writing of them under the name of Larka Kols, describes one of their cemeterics which contained a number of ancient stone monuments:

a number of ancient stone monuments:

'The major part of them had a sort of truncate pyramidal shape, and were marked superficially with groovings, which may possibly have some signification; they recalled to my recollection the ancient Ogam inscriptions of Ireland, though not actually similar to them in form. In this neighbourhood, too, I saw an ancient cross; hut regret to say, I do not retain any description of it, as I did not, at that time, fully recognise the importance of the symbol occurring otherwise than in connection with the Christian religion. The assumption, however, that it is the exclusive property of Christianity is clearly unwarranted hy certain now well-established facts' [quoting PASB, 1877, p. 189; JASB xivi. (1877) pt. ii. p. 179; to which may he added D'Alviella, Migration of Symbols, Eng. tr., London, 1894, p. 12 ff. and passim! 'Most of these stones were erected as memorials to worthless of the tribs' (op. cit. 163).

Another account of the death-rites shows more clearly the belief in the survival of the soul after death. After the cremation of the corpse, the ashes are placed in an earthen vessel until all the arrangements for interment have been completed.

pleted.

'Then the chief mourner, carrying the vessel with the remains of the deceased on her head, leads the funeral procession to every house in the village, the inhabitants of which come out and pay their last trihute of respect to the dead. The deep solemn notes of the drum and the low-voiced grief of the women form a weird funeral march as the procession winds from house to house, returning at last to the grave prepared close to the house of the deceased. Rice and other food is first thrown in, and then the ressel containing the remains is lowered into the hole and covered over with earth[see Food for the Dead]. A huge uncut slab of stone is placed over the spot to mark the grave and guard it against desceration. Outside the village, the Hos, like the Mundas, put up another monument to the deceased's memory in the form of a huge pillar of rock varying in height from four to twelve or fourteen feet' (Bradley-Birt, Chota Nagpore, 101).

2. Other religious beliefs.—Besides the cult

3. Other religious beliefs.—Besides the cult of deceased ancestors, the worship of the Hos is directed towards the propitiation of a host of malignant spirits of forest, hill, and stream, which

W. CROOKE.

HOBBES.—I. Life.—Thomas Hobbes, known to his friends as 'Malmesburiensis Philosophus,' an original and forceful English writer on political philosophy, was born at Westport, in Wiltshire, on 5th April 1588. His early education was received at the Westport church school, at a school oeived at the westport church school, at a school in Malmesbury, and also at one kept by a Mr. Latimer, who is described as 'a good Grecian, and the first that came into our parts since the Reformation' (J. Aubrey, Brief Lives, ed. A. Clark, Oxford, 1898, i. 329). Later, Hobbes entered Magdalen Hall, Oxford, where he became discontented with the traditional learning of the University and turned his attention to the study. University and turned his attention to the study of men and current affairs. After admission as bachelor on 5th Feb. 1608, he became tutor to the son of William Cavendish, later the second Earl of Devonshire, and began the life-long intimacy with bevoisinte, and began the ine-long intrinacy with a family whose social position and political fortunes carried him into that turmoil of public life wherein his opinions were formed. Through the travels incident to this connexion, Hobbes became acquainted with the work of such men as Galileo, Repler, and Montaigne. This fired his imagination and led him to conceive a system of philosophy worked out in the spirit of the new learning, and applied especially to the moral, social, and political problems of human life. He felt his project to be the more urgent because of the political disturbances of his time and the uncertainties of life and fortune incident to the Civil War. Although his political writings were not his earliest essays in philosophy, and although his political theory was probably worked out as a part of his general theory before the Civil War gave to it a special impetus, the publication at Amsterdam in 1647 of de Cive, and at London in 1651 of Leviathan, was felt by Hobbes himself to be a matter vitally important for the trend of events. He professed the ambitions of a scholar, owned a preference for scientific inquiry secure from the excitements of public life, and yet, in spite of self-confessed timidity, sought repeatedly the opportunity to make his writings felt by those in power. His contributions to political theory, together with his observations on human nature, are by far the most important parts of his philosophy. His own time and times subsequent have found little of marked significance in his other work. Yet the student of philosophy can find many illustrations of keen insight into logical problems and the theory of science, and the student of literature can find a real treasury of foreible and clear English prose. He died on 4th Dec. 1679, in his ninety-second year, and 'was buried,' as told by James Wheldon, 'in the parish church of Hault Whelmell, clear adjaining to the relie of the morn. Hucknall, close adjoining to the raile of the monument of the grand-mother of the present Earlo of Devonshire, with the service of the Church of England by the minister of the parish' (Aubrey,

Hobbes is described by John Aubrey, his triend and contemporary, as six feet high and something better; with a good sye of hazel colour; with a head of mallet form approved by the physiologers, and with a temperament 'sanguineo-melan-cholicus,' similarly approved; of temperate and regular habits; as an harmonical soul and not a woman-hater, although never married; of a sharp wit which was also sure and steady; as one who contemplated more than he read, and who remarked 'that if he had read as much as other men, he should have been as ignorant as they'; and as a man who 'would have the worship of God performed with musique' (ib. L 3481, 354).

2. Writings. -The writings of Hobbes show how wide his intellectual interests were. Especially

noteworthy is his interest in Greek literature, rhetoric, and mathematics. His translations are vigorous and suggestive. His rhetoric is largely an unacknowledged reproduction of Aristotle. mathematical writings expose his deep interest in the subject and also an incapacity to handle the more difficult problems. He believed he had squared the circle, and he engaged in controversies which redounded more to the credit of his adversaries than himself. The complete list of his

writings is as follows:

which redounded more to the credit of his adversaries than himself. The complete list of his writings is as follows:

The History of the Grecian War written by Thucydides, London, 1623; de Mirabilibus Pecci, do. 1636; Objectiones in Cartesii de Prima Philosophia Meditationes, Parls, abont 1641; Tractatus Opticus, do. 1644; Elementa Philosophica de Cire, Amsterdam, 1647 (a tew copies were privately printed in Paris, 1642, with the title Elementorum Philosophica Sectio Tertia, De Cive; in English: Philosophical Rudiments concerning Government and Society, London, 1651; Human Nature, do. 1650; de Corpore Politico, or Elements of Law, do. 1650; Answer to Davenan's Preface before Gondibert, Paris, 1650; Leviathan, do. 1651; Of Liberty and Necessity, do. 1654; Elementorum Philosophiae Sectio Prima, de Corpore, London, 1655, published in English, do. 1656; Six Lessons to the Professors of Mathematics, do. 1656; Questions soncerning Liberty, Necessity, and Chance, do. 1656; Harks of the Absurd Geometry, etc., of John Wallis, do. 1656; de Homine, sive Elementorum Philosophiae Sectio Secunda, do. 1657; Examinatio et Emendatio Mathematicae Hodiernæ, do. 1667; Examinatio et Emendatio Mathematicae Hodiernæ, do. 1662; Considerations upon the Reputation, etc., of Thomas Hobbes, do. 1662; de Principiis et Ratiocinatione Geometrarum, do. 1666; Appendix and Leviathan, Amsterdam, 1668; Quadratura circuli, Cubatio sphare, Duplicatio cubi, London, 1669; Letter to the Right Honourable Educard Hovard, do. 1669; Rosetum Geometricum, do. 1671; Three Papers presented to the Royal Society, do. 1671; Principia et Problemata aliquot Geometrica, do. 1672; Lux Mathematica, do. 1674; The Iliad and Odyssey of Homer, do. 1675; Letter to the Duke of Nevcastle, on the Controversy about Liberty and Necessity, do. 1674; The Iliad and Odyssey of Homer, do. 1675; Thobbes Malmesburiensis Vita Carmine Expressa, do. 1679, Thobbes Malmesburiensis Vita Carmine Expressa, do. 1679, Thobbes Malmesburiensis Vita Carmine Expressa, do. 1679, The Otto Hobbes in

theory as a part of a comprehensive and unified philosophy, and as a specific illustration of its principles. His statement in the 'Preface to the Reader' prefixed to his *Philosophical Rudiments* is a characteristic expression of his point of view:

is a characteristic expression of his point of view:

'I was studying philosophy for my mind sake, and I had gathered together its first elements in all kinds; and having digested them into three sections by degrees, I thought to have written them, so as in the first I would have treated of body and its general properties; in the second of man and his special faculties and affections; in the third, of ciril government and the duties of subjects. Wherefore the first section would have contained the first philosophy, and certain elements of physic; in it we would have considered the reasons of time, place, eause, power, relation, proportion, quantity, figure, and motion. In the second, we would have been conversant about imagination, memory, intellect, ratiocination, appetite, will, good and evil, honest and dishomest, and the like. What this last section handles, I have now already showed you. Whilst I contrive, order, pensively and slowly compose these matters (for I only do reason, I dispute not;) it so happened in the interim, that my country, some few years before the civil wars did rage, was boiling hot with questions concerning the rights of dominion and the obedience due from subjects, the true forerunners of an approaching war; and was the cause which, all those other matters deferred, ripened and plucked from me this third part. Therefore It happens, that what was last in order, is yet come forth first in time' (English Works, vol. it. p. xix)!

The Latin titles of his three principal works

The Latin titles of his three principal works reflect this general plan—de Corpore, de Homine, de Cire. These main divisions of philosophy are in their turn subdivided, but his philosophy finds its unity in the conception of bodies and their

I All references are to the Molesworth edition of Hobber's

HOBBES 729

relations to one another. There are two kinds of bodies, 'one whereof being the work of nature is called a natural body, the other is called a commonwealth and is made by the wills and agreement of men' (ib. i. 11). Accordingly, the whole body of knowledge may be divided, as he divides it in the elaborate table of the sciences in ch. ix. of the Leviathan, first of all into those sciences which deal with 'consequences from the accidents of bodies natural' and those which deal with 'con-

sequences from the accidents of politic bodies.'
This general and comprehensive scheme of a system of philosophy indicates one of the two chief ideas which are characteristic of Hobbes's Bodies, that is, things which can be moved, are the elements with which he deals. They are, including the human body, natural, and they move according to laws of motion which are natural to them. There is, consequently, a natural condition or state of bodies which follows from their mutual interactions and is the basis for any control or manipulation of them. This, in his view, is true not only of inanimate bodies, but also of man himself. There is a natural condition of mankind which illustrates the results which flow from his natural motions. This natural condition may be so controlled and regulated that a commonwealth is constituted. The State becomes thus the organized control of the natural motions—'the dispositions, affections and manners'-of men. It is a product of art utilizing Nature.

The other idea which markedly determines his reason is found in his conception of science itself.

'There are,' he writes in ch. ix. of the Leviathan and elsewhere, 'of knowledge two kinds; whereof one is knowledge of fact, and the other knowledge of the consequence of one affirmation to another. The former is nothing else but sense and memory, and is absolute knowledge. . . . The latter is called science and is conditional.'

This 'conditional' character of science does not, however, impair its usefulness. The ability of man to organize his observations in a connected discourse is responsible for all the benefits of civilization.

is responsible for all the benefits of civilization.

'The end of knowledge is power; and the use of theorems (which, among geometricians, serve for the finding out of properties) is for the construction of problems; and, lastly, the scope of all epeculation is the performing of some action or thing to be done. . . Now, the greatest commodities of mankind are the arts; namely, of measuring matter and motion; of moving ponderous bodies; of architecture; of navigation; of making instruments for all uses; of calculating the celestial motions, the aspects of the stars, and the parts of time; of geography, otc. By which sciences, how great benefits men receive is more easily understood than expressed' (English Works, i. 7).

The conditional character of science does, however, involve an important consequence for Hobbes's

ever, involve an important consequence for Hobbes's Science is concerned with consephilosophy. quences, with results that follow from accepted It is dependent on premisses or initial truths. It is dependent on these premisses and truths, and is conditioned by them. So far as we have the chain of possible consequences in mind, there is no source of difference of opinion in science itself which industry, discipline, and method may not remove. The source of controversy is exterior to science itself, in the initial premisses from which the consequences are drawn. These take their beginning from extended to the consequence of the consequences. perience, from that other kind of knowledge which is not science, but fact. If the similar experiences of men were free from variations, from prejudices, and from self-interest, science, so far as it rests on fact, would be free from dispute. But experiences are not uniform. It thus happens that men differ in their opinions, not because of differences in their reasoning, but because of differences in their experiences which reason cannot settle. Such differences ences can be settled only by mntnal agreement, or by the intervention of a constituted authority which arbitrarily decides all points at issue. Hobbes does not blink the rigid consequences of this conception of science. While he would commend his own philosophy because of its consonance with every man's experience and its conformity with facts accessible to all, he repeatedly asserts that in questions of fact individual differences may be so great

that only authority can settle them.

In these two principal ideas—(1) the idea of a natural order through the control of which all advantages of civilization and all social institutions arise, and (2) the idea of science as a body of consequences drawn from premisses which are often so subject to variation that they must be standardized by authority—the essential things in Hobbes's philosophy are contained. Nature is inadequate for man's uses without science and art, and these are inadequate to this service without a constituted authority. The problem of anthority would not, however, be a serious one if it did not involve men so seriously in their social and civil relations; if it did not, that is, involve the whole problem of man's pcace and safety. The problem of society becomes the problem of authority. With Hobbes it is the great problem of philosophy and overshadows all his other interests.

Hobbes's contributions to the philosophy of bodies in general do not descree particular notice. He is influenced throughout by Galileo, and sees every where motion and the laws of motion. It is his transference of these ideas to psychology that is first of all significant. Sense, imagination, the association of ideas, the passions, and the will are all conceived and expressed by him in terms of motion, or, more precisely, in terms of the reactions called forth in men by the stimuli which affect them. Thus, sense is defined as a 'phantasm made by the reaction and endeavour ontwards in the organ of sense caused by an endeavour inwards from the object, remaining more or less' (ib. i. 391). Imagination is 'decaying sense' and illustrates the law that motion, once started, continues until opposed by contrary motion; referred to the past, it is memory. The association of ideas—Holbes speaks of the 'train of imaginations' or the 'train of thoughts'—arises from the fact that motions which are simultaneous or successive in sense tend to recur as a whole when any one of them recurs. Passions are the 'interior beginnings of voluntary motions,' and will is defined as the 'last appetite in deliberation,' that is, as the last motion in a delayed or suspended series of motions.

These ideas Hobbes deliberately opposes to the aditional psychology of his day. They made traditional psychology of his day. They made comparatively little impression at the time, but we can see in them now the first important general statement of the basal positions of the physiological psychology of a much later day. It is the reacting organism on which Hobbes lays emphasis, an organism which, excited by external stimuli, reacts only after the excitations received have been

internally assimilated and organized.

'There is no other act of man's mind, that I can remember, naturally planted in him, so as to need no other thing, to the exercise of it, but to he horn a man, and live with the use of his five senses. Those other faculties, of which I shall speak by and five eenees. Those other facultiee, of which I shall epeak by and hy, and which eeem proper to man only, are acquired and increased by study and industry; and of most mon learned by instruction, and discipline; and proceed all from the invention of words, and epeach. For besides ecnee, and thoughte, and the train of thoughts, the mind of man has no other motion; though hy the help of speech, and method, the same facultiee may be improved to such a height, as to distinguish mon from all other living creaturee' (ib. iii. 16).

Because life itself is but motion, man can never be without desire or fear, just as he cannot be without sense. Thus, according to Hobbes, felicity is 'continual success in obtaining those things which a man from time to time desircth' (ib. 51); it is not 'the repose of a mind satisfied.' Nor does a man desire to enjoy once only, but rather 'to assure forever the way of his future desire; and this he can do only by having the power to do it'

HOBBES 730

(ib. 85). This is one of Hobbes's most important

generalizations in view of his theory of the State. He expresses it most emphatically in these words:

'In the first place, I put for a general inclination of all mankind, a perpetual and restless desire of power after power, that ceaseth only in death. And the cause of this is not always that a man hopes for a more intensive delight, than he has already attained to; or that he cannot be content with a moderate power: but because he cannot assure the power and means to live well, which he hath present, without the acquisition of more. And from hence it is, that kings, whose power is greatest, turn their endeavours to the assuring it at home by laws, or abroad by wars: and when that is done there succeeded a new desire; In some, of fame from new conquest; in others, of ease and sensual pleasure; in others, of admiration, or being flattered for excellence in some art, or other ability of the mind '(ib. 85 f.).

Associated with this is a second generalization

of similar importance:

of similar importance:

'Nature hath made men so equal, in the faculties of the body, and mind; as that though there he found one man sometimes manifestly stronger in body, or of quicker mind than another; yet when all is reckoned together, the difference between man, and man, is not so considerable, as that one man can thercupon claim to himself any benefit, to which another may not pretend, as well as he. For as to the strength of body, the weakest has strength enough to kill the strongest, either by secret machination, or by confederacy with others, that are in the same danger with himself '(ib. 110).

There this consideracy with the second to the strong of the same danger with himself '(ib. 110).

From this equality of ability men entertain equal hopes of securing the ends they desire.

And therefore if any two men desire the same thing, which nevertheless they cannot both enjoy, they become enemies; and in the way to their end, which is principally their own conservation, and sometimes their delectation only, endcavour conservation, and sometimes their detectation only, end cavour to destroy, or subdue one another. And from hence it comes to pass, that where an invader hath no more to fear, than another man's single power; if one plant, sow, build, or possess a convenient seat, others may probably be expected to come prepared with forces united, to dispossess, and deprive him, not only of the fruit of his labour, but also of his life, or liherty. And the invader again is in the like danger of another (fb. 1)1).

liherty. And the invader again is in the nactural (ib. 111).

Thus, in so far as men depend upon their natural virtually in a state of war 'of powers, they are virtually in a state of war 'of every man against every man.' War is a man's natural condition, the results of which Hobbes

thus eloquently describes:
'Whatsoever therefore is consequent to a time of war, where Whatsoever therefore is consequent to a time of war, where every man is enemy to every man; the same is consequent to the time, wherein men live without other security, than what their own strength, and their own invention shall furnish them withal. In such condition, there is no place for industry; because the fruit thereof is uncertain: and consequently no culture of the earth; no navigation, nor use of the commodities that may be imported by sea; no commodious building; no instruments of moving, and removing, such things as require much force; no knowledge of the face of the earth; no account of time; no arts; no letters; no society; and which is worst of all, continual fear, and danger of violent death; and the life of man, solitary, poor, nasty, brutish, and short (ib. 113).

This 'natural condition of mankind' is not as

This 'natural condition of mankind' is not, as Hobbes expressly dcelares, the primitive condition in which men once lived. It was never universal. The nearest approach to it is, he thinks, represented in the 'savage people in many places in America.' Yet it is man's natural condition if we consider how his propensities express themselves in the absence of a restraining and superior power, and that the function of government is restraint and control, and observe that the police and the systematie guarding of property are evident indications of the suspicion men naturally have of one another. In other words, man is not naturally what the Greeks called a 'political animal.' Naturally he is an impulsive animal seeking the gratification of his desires, and the security of his life, and finding that this seeking brings him into competition with his fellows. As such his rights are measured and

his fellows. As such his rights are measured and determined solely by his power to secure what he desires. He knows nothing of right and wrong, of justice and injustice, as over against his fellows. Where there is no common power, there is no law; where no law, no injustice. Force, and fraud, are in war the two cardinal virtues. Justice, and injustice, are none of the faculties neither of the body, nor mind. If they were, they might be in a man that were alone in the world, as well as his senses, and passions. They are qualities, that relate to men in society, not in solitude. It is consequent also to the same condition, that there be no propriety, no dominion, no mine and thine distinct; but only that to be every man's, that he can get;

and for so long, as he can keep it. And thus much for the ill condition, which man by mere nature is actually placed in; though with a possibility to come out of it, consisting partly in the passions, partly in the reasons' (ib. 115 t.).

It is upon such a foundation that Hobbes con. eeives the State, and, with the State, the moral laws, to be built. The fear of death, the necessity of a sure provision for the needs of life, the disastrous consequences of cumity and war, are tendencies which naturally incline men to peace. These tendencies are supplemented by reason, which leads men to agree or attempt to agree with one another and to set up certain rules of conduct which make for peace. These rules suggested by reason Hobbes calls 'laws of nature,' of which the two most fundamental are: (1) 'that every man ought to endeavour peace as far as he has hope of obtaining it, and, when he cannot attain it, that he may seek and use all helps and advantages of war'; and (2) 'that a man be willing, when others are so too, as far forth as for peace and defence of himself he shall think it necessary, to lay down this right to all things; and be contented with so much liberty against other men, as he would allow other men against himself' (ib. 117 f.). From these fundamental natural laws or dictates of reason Hobbes deduces others, all looking towards the establishment of peace through mutual agreements, concessions, and covenants.

He insists, however, that these laws are contrary to our natural passions, as they impose restrictions on our desires. They are obeyed only so long as obedience to them is necessary and profitable, if there is no established power to enforce them. 'Covenants without the sword are but words and of no strength to secure a man at all' (ib. 154). Consequently, mutual concessions and covenants are not sufficient. To live peaceably men must agree to transfer all their individual power to a single individual or a group of individuals, that is, to a sovereign. Only then is a State established But the transfer of power must be absolute and thereby the sovereign becomes an absolute sovereign. To him belong ultimately all decisions of reign. right and wrong, of justice, and of property. By him all disputes are settled. From his decisions there is no appeal, for the idea of appeal contradicts the idea of a sovercign power, and is, therefore,

irrational.

"This is the generation of that great Levlathan, or rather, to speak more reverently, of that mortal god, to which we owe under the immortal God, our peace and defence. For by this authority, given him by every particular man in the commonwealth, he hath the use of so much power and strength conferred on him, that by terror thereof, he is enabled to perform the wills of them all, to peace at home, and mutual ald against their enemics abroad. And in him consisteth the essence of the commonwealth: which to define it is one person of whose acts commonwealth; which, to define it, is one person, of whose acts a great multitude, by mutual covenants one with another, have made themselves every one the author, to the end he may use the strength and means of them all, as he shall think expedient, for their peace and common defence' (ib. 158).

The sovereign power may be attained by volun-

tary agreement or by natural force.

It is thus clear that Hobbes regards the State as a product of man's attempt to control, through the use of his reason, his natural desires and pro-pensities. No sneh control would be necessary if the desires of men did not conflict. The existence of the State implies, therefore, restriction, and consequently needs to be supported by force. In other words, men do not naturally consent to be governed. Government can exist, therefore, only government can exist, therefore, only so long as it is absolute. Any other condition is incipient war or revolution. It is to be noted, further, that Hobbes bases all morality on the decisions of the sovereign power. There is no natural right or wrong, justice or injustice. Virtue is not, like sense, the natural exercise of a natural faculty. It is a thing imposed on nature, and is faculty. It is a thing imposed on nature, and is practised only so long as there is interest or power

to enforce it. Hobbes is thus not properly classified as either an egoist or a hedonist. With him morality is wholly a political matter, and politics

is wholly the work of reason.

Religion Hobbes defines as 'fear of power invisible, feigned by the mind or imagined from tales publicly allowed' (ib. 45). If the tales are not publicly allowed, the fear is superstition. It is thus clear that Hobbes makes religion also a political matter. Yet he recognizes also a 'king-der' of God'. That which is significant in his political matter. Yet he recognizes also a 'king-don of God.' That which is significant in his philosophy here is not its positive content, but the separation of the doctrine of God from all that concerns the doctrine of Nature.

'The Scripture was written to show unto men the kingdom of God and to prepare their minds to become his obedient subjects; leaving the world and the philosophy thereof to the disputations of men for the exercising of their natural reason'

(ib. 68).

To enter the kingdom of God it is necessary to believe that Jesus is the Christ and to obey the laws of God. In a Christian commonwealth there can be no conflict between allegiance to God and to the State. It is only when the civil sovereign is an infidel that such a conflict may arise, for it is a law of God, found out by reason, that subjects should obey their sovereigns. Yet even here the conflict can arise, Hobbes thinks, only when an infidel sovereign commands a Christian subject to renounce Christ. Then the subject has no resource

but to 'go to Christ by Martyrdom.' what Hobbes regards as the essential tenet of the Christian faith-namely, that 'Jesus is the Christ, the son of the living God '-all the public regulation of religion rests with the sovereign. thus to the end of his doctrine the political philosopher who would have the State supreme in all those matters which affect the mutual relations of Yet his emphasis on absolute power does not fall in the interests of the rights of sovereigns, but in the interests of peace and public safety.

LITERATURE.—The principal ed. of Hobbes's works is that by W. Molesworth (London, 1839-45) in 10 volumes, 11 containing the works in English, 5 the works in Latin, an extensive index, and a number of plates. This ed. contains also the chief sources of his life, namely, his autobiography and the account of him by John Auhrey. The best ed. of the Leviathan, his most widely known work, is the Cambridge Press ed. of 1904 In addition the following may he mentioned: G. Croom Robertson, Hobbes, Edinburgh, 1886; F. Tonnies, Hobbes Leben und Lehre, Stuttgart, 1896; E. H. Sneath, The Ethics of Hobbes, Boston, 1898; F. J. E. Woodbridge, The Philosophy of Hobbes, in extracts and notes collated from his writings, Minneapolis, 1903; Leslie Stephen, Hobbes, London, 1904; Mary W. Calkins, The Metaphysical System of Hobbes, Chicago, 1905.

HOLINESS (General and Primitive) .- 1. Holiness is the great word in religion; it is even more essential than the notion of God. Real religion may exist without a definite conception of divinity, but there is no real religion without a distinction between holy and profane. The attaching of undue importance to the conception of divinity has often led to the exclusion from the realm of religion of (1) phenomena at the primitive stage, as being magic, although they are characteristically religious; and of (2) Buddhism and other higher forms of salvation and piety which do not involve a belief The only sure test is holiness. first, holiness constitutes the most essential feature of the divine in a religious sense. The idea of God without the eonception of the holy is not religion (F. Schleiermacher, Reden über die Religion, Berlin, 1799). Not the mere existence of the divinity, but its mana, its power, its holiness, is what religion involves. This is nowhere more obvious than in India, where the men of religion, through their art of the gods, who, in order to maintain something of the gods, who, in order to maintain something of their religious authority, were obliged to adopt ascetie holiness themselves (Sat. Brāhm. ii. 2. 4, ix. 1. 6, 1 ff.). The definition of piety (subjective religion) runs thus: 'Religious is the man to whom somothing is holy.' The holy inspires awe (religio). The original idea of holiness seems to have been

The original idea of holiness seems to have been somewhat indeterminate, and applied to individual things and beings. Then the great systems were evolved which are found (1) in barbarie societies, such as the Polynesian, West African, etc.; and (2) in nomistic religions such as the Avestan, and in Judaism, where everything is arranged under the categories of 'tabu' (holy) and ordinary (profane). The 'holy' is apart from ordinary life. Spiritual religion tries to abolish the outwardness of this distinction and to make it a purely personal one.

Hence it strives to bring the whole of life under the sway of holiness. The prophetic religion in Israel considered the whole people of Israel as holy (Lv 19<sup>2</sup> 20<sup>7, 24</sup>, Jer 2<sup>3</sup>, Is 62<sup>12</sup> 63<sup>18</sup> etc.) by bringing the idea of 'the chosen people' into connexion with the idea of holiness. But the ideal of spiritual religion—that every person and every thing should be holy—is an absurdity to primitive tabu systems and to nomistic holiness, because something must be left free for use. In the same way ascetic schemes of salvation presuppose that some people are not holy, religious, in a strict sense. If every one were 'religious,' 'holy,' there would be no families, no future generations, nobody to till the ground, constitute society, and perform the daily

2. Holiness is viewed as a mysterious power or entity connected with cortain beings, things, events, or actions. Amongst the Melanesians everything that exceeds the ordinary capacity of man or the ordinary course of nature is called mana. In some cases, as with this Melanesian In some cases, as with this Melancsian mana, the power is expressly reserved for certain beings. Some souls, e.g., have no mana, and, therefore, are soon forgotten and receive no wor-In other cases, as with the Iroquoian orenda, 'this hypothetic magic is held to be the property of all things, all bodies,' etc. (J. N. B. Hewitt, 'Orenda and a Definition of Religion,' in Amer. Anthropologist, new ser., 1902, p. 33 ff.). But in any case only its concentrated appearance in some beings and things is of practical importance. Of the somewhat analogous conceptions and words

1 From the classical work of R. H. Codrington, Melanesians (Oxford, 1891), this term has been adopted, through L. Marillier, R. R. Marett, etc., as the general term for positive holiness working as power, as distinguished from negative holiness involving the conception of danger, interdict, prohibition, which in current terminology is now designated by the Polynesian word

which are to be found everywhere in primitive religions, we mention here a few examples:

which are to be found everywhere in primitive religions, we mention here a few examples:

The Australian joia (A. W. Howitt, Nature Tribes of South-East Australia, London, 1904); the ancient Indian brahman (q.v.; ci. 11. Oldenberg, in Anzeiger für indogerm. Sprach und Altertumskunde, viii. [1897] 40; and N. Söderblom, Gudstrons uppkomst, Stockholm, 1913); the tendi of the Bataks; the sumangal, 'life-stuff,' and the pemali, 'extraordinary,' mysterious,' of the Malays (A. O. Kruijt, Het Animisme in den indischen Archipel, The Hague, 1906; W. W. Skeat, Malay Magie, London, 1900; Skeat-Blagden, Pagan Races of the Malay Peninsula, do. 1906; J. Warneck, Die Religion der Batak, Leipzig, 1909); the hasina of the Malagasy (defined in the dictionaries as 'indvelling or supernatural power, which renders a thing good and effective; the power of a medicine; the truth of a word; the efficacy of amulets and incantations; the holiness of a thing,' etc.; cf. A. van Gennep, Tabou et totémisme à Madagascar, Paris, 1904); the nlongo of Congo languages (longo signifies 'medicine,' 'charm' [K. E. Laman, in his forthcoming Dictionary]); the orunda of the Mpongwe; the chi of the Fans (cf. A. Le Roy, La Religion des primitifs, Paris, 1902); the dzo of the Ewe (D. Westermann, Worterbuch der Eve-Sprache, Berlin, 1905); the oudah of the Pygmies (R. R. Marett, The Threshold of Religion, London, 1909); the vakanda of the Siouan Indians (which was used 'indiscriminately as substantive and adjective, and with slight modification as verh and adverb,' which may be translated by 'mystery,' 'power,' 'sacred,' ancient,' grandeur,' 'anlmate,' 'inmortal, 'although 'no English sentence of reasonable length can do justice to the aboriginal Idea expressed by the term wakanda' (W. J. McGee, 'The Siouan Indians,' 15 RBEW, 1897, p. 182ff.; J. O. Dorsey, 'omaha Sociology,' '8 RBEW, 1897, p. 182ff.; J. O. Dorsey, 'omaha Sociology,' 8 RBEW, 1897, p. 182ff.; J. O. Dorsey, 'omaha Sociology,' 3 RBEW, 1897, p. 182ff.; J. O. Dorsey, 'omaha ha harioti,' hunting, o

This mysterious holiness is to be found, in the first place, in the medicine-man, or priest-king, who is powerful and sacred (J. G. Frazer, Lectures on the Early History of the Kingship, London, 1905), and in the sacred formula which is used as a spell or a prayer. Further, it belongs to special objects which are connected in any way with the holy rites and the exercise of religion or magic, c.g. the churinga (tjurunga, Strehlow) of the central tribes of Eastern Australia (Spencer-Gillen, 1899, 1904; C. Strehlow and M. F. von Leonhardi, Die Aranda-und Loritja-Stämme in Zentralaustralien, pt. iii., 'Die totem. Kulte,' Frankfort, 1911), the bull-roarers, drums, rattle-staffs (the Mexican rattle-staff was ealled *chicauaztli*, 'that through which one makes strong, powerful' [E. Seler, in Veröff. aus dem kön. Museum für Völkerkunde, vi. (Berlin, 1899) 89]), and other things used in the mysteries; the West African minkisi, 'fetishes' (M. H. Kingsley, West Afr. Studies, London, 1899; R. E. Dennett, At the Back of the Black Man's Mind, do. 1906; Laman and other missionaries, in Nordenskiöld, Etnografiska bidrag af svenska missionärer, Stockholm, 1907). It also belongs to relics, amulets, divinities, their images, and everything connected with them. In a wider sense the mysterious power of holiness is supposed to be the cause of everything which is out of the ordinary eonrse, and which, therefore, demands special explanation. Primitive man not being as yet an Primitive man not being as yet an individual, but only part of society (the real unity), holiness is not a thing to be used for individual, anti-social, or selfish purposes—in which case its use becomes the worst of abuses, namely, sorcery or black art—but constitutes the great treasure of the community, manifested in its sacral institutions, in manifold objects, and in its members, who derive their life, power, and happiness from the general holiness, and at the same time have to enhance and concentrate this common mysterious infinence through their ritual celebrations and manly actions. But the essential connexion be-tween 'the sacred' and society does not imply that the notion of the 'sacred' is merely a kind of objectifying and idealizing of the committy as a power mysteriously superior to the individual (E. Durkheim, Les Formes élémentaires de la vie

religieuse, Paris, 1912).
We meet, of course, with somewhat different lines of evolution in proceeding from the most primitive stages onwards, and a supposed uniformity must not be allowed to obscure the peculiar features of holiness in particular societies at the lower stages of civilization. But, as far as we can see, the psychological origin of the conception of holiness seems to have been the mental reaction against what is startling, astonishing, new, terrify-This reaction may have expressed itself in a ery or an exclamation. Individual experiences influenced the collective mind, which by degrees ereated forms of language which gave more durable expression to the mental reaction in face both of what was really new and of certain often recurring phenomena which never cease to startle and awaken a vivid emotion. A motley series of beings, things, events, and actions are named by such words as 'the great one,' 'the powerful,' 'very old,' 'dangerous,' 'suecessful,' 'divinc,' etc.; and—what is still more significant—those things are surrounded, by a natural reaction, with a fence of precautions and interdictions. The first point is that these startling things are not to be treated lightly. It is evident that the idea of the extraordinary (this seems also to be the original meaning of the Semitie qds; ef. below, p. 751b), as distinguished from the ordinary, already exhibits a tendency towards the conception of the supernatural. Primitive man is unable, indeed, to conceive anything beyond Nature or higher than Nature; yet the term 'supernatural' may perhaps supply the best conception of what 'the holy' means to him.

'Holiness' so conceived is the most valuable source of health, strength, food, success, influence; at the same time, it involves a constant danger. Hence the rites to which the conception gives rise have either a positive or a negative character.

3. The positive rites have as their object the acquiring, concentrating, and utilizing of holiness. (1) Augmenting rites are to the greatest extent employed in order (a) to produce or augment the supply of food—e.g. Australian intichiuma and eeremonies analogous to the agricultural rites in which the holy power may be concentrated in the last sheaf, a cake, an image, an animal, a tree, or a man. Phallie or sexual religion is also chiefly concerned with the well-being of the herds and of the field. In order to secure fertility, the art of producing rain and sunshine was exercised; and fishermen needed a suitable wind. Everything is accomplished through the power of holiness, natural or acquired; at the same time a certain technique is elaborated, with impersonal rules and laws. (b) The power may also be acquired in other ways than those connected with the procuring of ordinary food. One may receive it through blood, which is either drunk or smeared over the body. It may be communicated by saliva or breath. Parts of beasts or men imbned with the mysterious thing may be eaten; or men, perhaps one's own sons, may be killed in order to add to one's capital of life. Sacrifice served as a means of endowing with holy power, before it was bronght into connexion with a divinity, in the way of eommunion or by being considered as a gift. The sacrifice exercises an immediate effect. This is obvious, e.g., in the foundation or building-sacrifice, where the life that is partified communicates many strength. life that is sacrificed communicates mana, strength, to the foundations and to the house. Even when a sacrifice is presented to a divinity, the original

conception may prevail. The sacrifice communi-Therefore the images of cates holiness or power. the gods are smeared with blood, the precious fluid which contains the mana. In the religion of blood par excellence—that of ancient Mexico—the men pour out their blood from tongue or members in order to strengthen the gods, and the divinities are portrayed as catching in their mouth the jet of blood from the victim. Blood appears with grim frequency in the Mexican sacred rites; it enabled the divinities to pursue their beneficent tasks in Nature (G. E. Seler, Gesammelte Abhandlungen zur amer. Sprach und Altertumskunde, ii. [Berlin, 1904] 704 ff. and passim; Codex Borgia, i. [Berlin, 1904] 174 ff.). The scalps which are seen hanging in the clubhouses of the Pacific islanders are not mere decorations; they are mainly sources of power to the community. To this group may also be assigned the ceremonies intended to secure help against sickness, and success in hunting, love, or war. To the category of augmenting rites belongs also the art of injuring or killing enemies, because this increases the vitality of the community. But corruptio optimi pessima. When used against members of one's own blood or one's own com-munity, such practices become the blackest sin.

(2) Revealing rites have the object either of (a) revealing the future—oracles, prophecy; or of (b) indicating the guilty—ordeals, which originally operated directly without any divine intervention.

(3) In the initiatory rites to (a) manhood, (b) secret societies, or (c) the priesthood, the positive element, i.e. the acquiring of holiness, is still more closely bound up with the negative element of

danger and prohibition.

(4) In the interdicts and observances imposed on holy persons it is impossible to determine in every case whether the value or the danger of holiness is the predominant motive. As we have seen, value and danger are blended together in 'the holy.' The holy man exposes himself to personal danger in performing acts which are forbidden or tabu. At the same time such precautions are intended to preserve the precious power in him which guarantees the welfare of the community. They may be said to have also a positive purpose. Holy persons are subjected to more severe restrictions than ordinary people, because they stand in a more important relation to holiness and religion (just as orthodoxy is more rigidly required of clerics than of laymen).

4. The negative or prohibitory rites are designated in current language by the word tabu (the leading collection of tabu rites is that made by J. G. Frazer, Taboo and the Perils of the Soul, London, 1911). The word belongs in this form to the Tonga dialect in the Friendship Islands, and is a compound of ta, 'marked,' and pu, an adverb with an intensive force, hence = 'marked thoroughly' (Frazer, in EBr?, s.v. 'Taboo'). It is used in many regions of the Pacific in the sense of 'sacred,' 'holy,' 'prohibited,' 'forbidden' (besides other words, such as rahui, which is more common in Easter Island [W. Lehmann, Anthropos, ii. [1907] 258]). C. E. Meinicke (Die Südseevölker und das Christentum, Prenzlau, 1844) called attention to its signification as a divine power, manifesting itself in such a way that everything to which it is applied is withdrawn from the use of ordinary people. Everything was divided into two classes: moa, that which was withdrawn from ordinary use; and noa, the usual, the common, the protane. Thus the tabu is closely connected with the idea of

Takao tapu means 'a secret word,' vahi tapu, 'a prohibited place,' 'a place regarded as holy'; kiri tapu, 'a sacred skin, one not to be touched or approached.' Verbal forms are tabus, 'teabstaln from'; tapui, 'to make sacred'; akatapu, 'to make holy,' 'to consecrate' (E. Tregear, Maori-Polyn. Comp.

Dict., Wellington, 1891, s.v.). The forbidden is in Malagasy fady; mifady means 'to abstain from.' Among the Ba-Ronga (H. A. Junod, Les Ba-Ronga, Neuchatel, 1898) yila corresponds to tabu. The Zulu says zila (ila with reflexive zi), 'to abstain from.' In the Bondai language zila means 'detest'; Congo dialects have kizila with the meaning of 'sacred object,' 'fetish.' A more special word is the Zulu hlonipa (inhloni, 'shame,' respect,' and pa, 'give'), 'to give respect,' to show special reverence,' in observing several rules of ritual. The wife has to hlonipa her husband and his parents by not using their proper names or words that resemble their proper names, by not touching their milk-vessels, etc. Mother-in-law and son-in-law must hlonipa each other by avoiding each other. Everybody must hlonipa the king and dangerous animals by not using their right names, etc. The Malays give their children pantang (=tahu) rules.

The close connexion of the tabn with the mysterious power is found in the common idea of extraordinariness. Tabu is thus what is new, e.g. the foreigner, the new-born child, the firstfruit, the new metal (iron); certain phenomena which constantly recur, but always seem to be extraordinary, e.g. sexual life, death, war, hunting; and animals and men endowed with special prudence, power, or success.

5. Later the tabu is often connected with the soul-a fact which admits of different explanations. The relation to the soul is sometimes secondary or imaginary; e.g., the reason alleged by the Bataks of Sumatra for not cutting all the hair of the child is connected not with begu, the soul (especially after death), but with tendi, the impersonal life-stuff, or mana. But sometimes the interdict refers to the soul or to other considerations equally foreign to holiness proper, although the general features are very similar. The distinction may be difficult or impossible to draw in every single case. Nevertheless, it is required by the essence of the tabu-holiness. Thus, a sacred being is subjected to a multitude of awkward rules and interdicts. He must not behold the sca or a lake, the sun must not shine on him, he must not touch the ground, not even his own head, nor cat with others, ctc. Why? Because his soul is exposed to danger and may be injured or taken away? It is not so much a case of personal danger for the soul as of precautions against dissipating the precious holiness concentrated in the chief. Therefore he holiness concentrated in the chief. is himself dangerous to others who cannot bear contact with his mana. In death-rites the necessity of distinguishing the two motives—concern for the soul and for holiness—is more evident. (a) A dead body, either of man or of beast, is danger-A Kaffir who has killed a python is purified in water. A Laplander becomes tabu for three days after having killed a bear. At the ritual days after having killed a ocar. At the ribual murder of the bear among the Ainns, in Siberia, and in Lapland, or of the bull at the *Bouphonia* in Athens, the killed animal is wept over and the killer undergoes a sham punishment. This may have something to do with fear of the ghost. But it may also depend upon the holiness of the animal The case is clearer or its kinship with man. with the widower in British New Guinea, who must hide himself like a wild beast and go about armed with a tomahawk against the dangerons soul of his dead wife. (b) Love, not fear, may also lead to special precautions. Pointed objects and knives must not be used after death, lest they may harm the dead. The Chinese even avoid using their enting sticks during a certain time. Those rules special precautions. eating-sticks during a certain time. Those rules do not belong to the tabn. (c) But it is impossible to explain the tabn of hunters and warriors, and mourning prohibitions in general, by fear or low of the dead person. The killing of a man or a beast shows the possession of a mana which makes it necessary for others to avoid him and his weapons and snares, and for him to submit himself occasionally to precautions analogous to those always observed by the sacred priest-king. The corpse also suggests uncanniness. Hence its im

purity, and the withdrawal of the mourners from ordinary life. In Polynesia they must not carry food to the mouth with their own hands for ten months. The chief is always subjected to this rule, because of the holiness of his head. In this instance concern for the soul is excluded as an explanation. The tabn of the Laplander and the Kaffir and its purification mentioned above may both depend on their being charged with 'holiness,' mana. Or take the interdict as to preserving severed hair and nails or remains of meals. The reason is lest some one may take them and harm or kill their original owner by means of sympathetic magic, according to which the whole can be influenced through a part of it. This has nothing to do with tabn or holiness. But the case has another side. If the person to whom the hair and nails or the meal belonged is holy, it is tabu to touch them, because they are charged with holi-The holy man in question must also take precautions against losing any of his precious power. Knots are often forbidden because they suggest complication and difficulty. Sympathetic magic uses them in order to cause hindrance and harm. The prohibition can acquire a secondary relation to holiness. The flamen Dialis in Rome, e.g., was forbidden to have any knots on his clothes, because they might be a hindrance to the beneficent action of his holiness.

6. It is, in fact, the essence of the tabu-interdict that it is not merely the avoiding of a definite danger by avoiding its cause (this may be a soul, sympathetic magic, the interest of society, or anything else); rather it amounts to an unconditioned and unreasoning 'you shall not.' The imperative oharacter of duty, which Kant called the 'categorical imperative' and which he admired as the divine in man, is characteristic of primitive tabu, in spite of the differences as to the content of the prohibition or commandment. There is something mysterious, dreadful, about the danger of breaking a tabu (Marett, op. cit.). The aborigines cannot always tell the reason why a tabu is forbidden or why a thing or a being is holy. It is a fact, and a most important one. Of course, the tabu originates to a certain extent in natural observations. The rules can sometimes be traced back to a real practical interest and use. At a later rationalistic stage of religion, Jews, Parsis, and Hindns, with the help of Western scholars, have tried to trace in their tabus great improvements and discoveries in hygiene, breeding, and agriculture. Moses, Zarathushtra, and Mann, to whom the tabu systems were erroneously ascribed, have been praised as carly discoverers of the conditions of health. This is not completely devoid of truth, but it misses the characteristic of tabu, which foreshadowed the idea of the supernatural rather than of the rational. The common custom of isolating the woman in child-bed in a miscrable birth-hut, and handing her food on long poles, or of subjecting boys, and sometimes also girls, to barbarous tortures at initiation, is not a matter of hygiene. It is the danger due to holiness that demands such practices.

7. The unreasoning awe of tabn appears in the consequences of breaking it. (a) Death or sickness immediately follows. An Anstralian died when he heard that he had lain upon his wife's blanket. A Hova youth in Madagascar fell into convulsions when he learnt that the meat he had caten belonged to an animal holy to his kin. How would the reader of the present article feel if he were told that he had been feeding on dog cutlets or human kidneys? The origin of death and sickness is often explained by the breaking of a tabu. The Ningpo in Bengal, we are told, were immortal until some one entered a pool which was tabu.

Pandora's box was not to be opened; when it was opened, diseases came out. The effect may be a direct one, just as fire burns or poison kills, without the intervention of a divinity, which constitutes a secondary explanation. With the development of worship, tabu-rules come to be regarded as divine commandments. In other cases society sanctions the tabu through punishments inflieted upon the guilty, for holiness is the very source of life and strength to society. Such was the cause of the massacre of Marion and his erew in the Pacific in 1772. They had tried to catch fish in a holy place. In 1899 the men of the ship Boyd were murdered in New Zcaland, because the captain had treated the son of a chief, i.c. a tabu person, in an ignominious way. Animals as well as men are killed if they defile holy ground by entering it or in any other way. In 185<sup>12</sup> 6<sup>10x</sup>, 28 6<sup>xx</sup>, 1 Ch 13<sup>xx</sup>, Jos 6<sup>18</sup>, death or plague follows directly (in Jos 3<sup>13</sup> the holy object exercises its power otherwise). In Lv 10 God punishes the breaking of a tabn. Even where a divine punishment is referred to the original meaning sometimes seems referred to, the original meaning sometimes seems to have implied an immediate consequence of touching the holy, as Nero's illness after his sacrilegious bath in holy water (Tac. Ann. xiv. 22). In Jos 7<sup>25</sup> the punishment is inflicted by the community, as the Ewe nsed to burn alive a man who had killed the holy python. Such punishments occupy a large portion of sacred law everywhere (cf. E. Krueger, De Romanorum legibus sacris, Königsberg, 1912). Sometimes, as in Ex 19<sup>121</sup>, Lv 19<sup>3</sup>, Nu 1<sup>51</sup>, we do not exactly know whether the penalty of death is referred to the inherent holiness of the thing, to God's vengeance, or to judicial punishment.
(b) There are also milder consequences, punishments, which at the same time effect a purification; or the immediate harmful consequence or punishment has its place taken by ceremonies for removing the contagion. There is anxiety to get rid of the dangerous stuff, whether it is considered as too strong a dose of holiness or as entirely bad. If a man had happened to touch a Tonga chief, he dared not put his food into his mouth with that hand before he had returned the mysterious power to the chief by rubbing the front and the back of his hand against the sole of the chief's foot and afterwards cleansing his hand with water. To such averting rites belong all kinds of purifications and atonement after murder, sexual intercourse, child-birth, etc. A scapegoat may be mado to bear the impurity. Tabu food may be vomited np. Likewise the heart is disburdened of its sin by confession. (1) The medicine-man gives 'a pretended emetic' to one whose breaking of some tabu is manifested by presented the presented procession. tabu is manifested by pains, sickness, misfortune. Confession itself effects a deliverance; sin and its evil consequences are lessened by confession. The modern idea of sin as sickness is, in fact, the primitive one. (2) At a later stage, sin is considered as an offence against God or man, and confession is addressed to Him, and is not merely a kind of physical deliverance. But the immediate comfort of confession is not forgotten (Ps 32). Adversitics show that God is angry. Why? Because of sin, of which the guilty one himself is perhaps unaware. He confesses his sins, known and unknown, in order to remove the cause of his mis-fortune. (3) Sin has two consequences: physical, material disaster; and the sense of guilt. At a higher stage the latter consequence is more feared than the former. Confession is intended to obtain pardon and to remove the guilt rather than the material results of the sin.

(c) In many cases the breaking of a tabu cannot be avoided. It is impossible entirely to avoid touching 'the holy.' The new-born child must be cared for. The woman in child-bed cannot be left

completely alone. The corpse requires to be moved and attended to in some way. One cannot help The firstfruit is seeing and meeting foreigners. full of mysterious power, but it constitutes the very sustenance of men. How is the precious power to be appropriated without incurring risk? By taking an antidote or a homocopathic preventive, or by rendering oneself immune in some other way against the danger of holiness. Such precautions form the kernel of a set of primitive rites which, later on, assume another meaning. The most important are: (1) 'politeness' ceremonies vis-à-vis strangers, in which, no doubt, natural kindness accounts for much, and is closely connected with the tabu fear (E. Westermarck, MI, London, 1906, i. 585 ff.); (2) funeral rites (see DEATH AND DISPOSAL OF THE DEAD); (3) puberty rites and wedding ceremonies, which are intended at once to indemnify against the danger of sexual holiness-tabu and to secure its efficacy in the matter of fecundity; (4) firstfruit rites at the birth of children and animals and before the eating of the first crops in the spring (see FIRSTFRUITS). In these ceremonies as well as in sacrifice (H. Hubert and M. Mauss, Mélanges d'histoire des religions, Paris, 1909; cf. Satapatha Brāhmana [SBE xii. etc.]) and other rites mentioned above, we can sometimes distinguish introductory rites designed to prepare for intercourse with the holy in order to avoid its dangers; and averting rites, which are intended to remove the holiness before resuming ordinary life.

8. The value of primitive holiness or tabu lies (a) in the strength and coherence it gives to society, for 'the holy' supplies a perpetual centre of gravity, manifested in holy things, beings, places, and actions. In his doings and feelings the individual more or less approaches 'the holy,' but he is never completely out of touch with it. To us the tabu rules and the objects charged with holiness seem to be pure nonsense. But to the primitive mind they constitute the precious treasures of the community, from which strength, success, and confidence are derived. How strict and elaborate the systems of holiness are, e.g., in West Africa, has been told by M. H. Kingsley, Dennett, Ellis, Nassau, Spieth, Laman, Hammar, and others. Certain widely diffused festivals, in which the usual bonds and rules of society are relaxed, seem to have been designed for the purpose of renewing the quickening and strengthening essence of holiness in the tribe or people.

The social assurance afforded by the tabu systems appears in the superiority felt over tribes that have less numerous or less severe tabus. The tabu is regarded as a mark of distinction. The Zulu boy, in refusing to eat fish among the Thonga, the northern neighbours of the Zulus, boasts of belonging to a race superior to those wretched Ba-Thonga who eat fish (H. A. Junod, The Life of a South African Tribe, ii., Neuchatel, 1913, p. 67).

(b) The tabu imposes upon primitive man numberless intolerable, cruel, and harassing observances, which make his life a bondage. Freedom ances, which make his life a bondage. Freedom does not lie at the bottom, but is found perhaps at the top, of the scale of human development. At the same time the superstitious sanction of the rules of holiness has had an inestimable influence on civilization and the improvement of society. Animal desires were restrained; in the hard school of tabu man was taught self-control. Through Through abstinence and self-restraint man acquires strength and power not only over himself but also over others. It is not impossible that such an experience underlies the institution of tabu (Marett, at the Summer School of Theology, Oxford, 1912). At any rate such was its effect. J. G. Frazer has shown in his treatise entitled Psyche's Task, a Discourse concerning the Influence of Superstition on

the Growth of Institutions (London, 1909), what the system of holiness meant for the establishment and stability of government, for the security of private property against theft and destruction, for the sanctity of marriage, and, above all, for the respect for and protection of human life. Civilization and progress are inconceivable without the profoundly unreasoning sanction afforded by holiness. The tabu

'is inspired by strange, unscientific physiological ideas regarding defilement and contagion which will disappear when scientific knowledge has spread amongst them. But let these ideas be somewhat amended, let the natives understand that what is taboo is not physical uncleanness but moral evil, and their strong aversion to the act tabooed may become a powerful moral impulse for good '(Juned, op. cit. i. 9; ct. the Edinburgh Conf. on Missions, 1910, Rep. of Com. iv. 11).

Rational insight has gradually superseded barbarous rites and dispelled superstitions awe. As to the main principle of holiness-its unconditional imperative character and 'supernatural' sanction -the question is whether humanity can dispense with it in the future, and be guided by merely rational motives without religious guarantee and enforcement. This question has both a practical and a theoretical side. The practical problem is whether the self-restraint and effort necessary to civilization can be maintained without the unreasoned element inherent in the conception of holiness and developing its intrinsic value through-out the history of civilization. The theoretical problem lies deeper: Has the imperative and absolute form of duty any metaphysical grounds, or is it based on an initial error, by which humanity has been misled throughout its whole existence?

9. In order to apprehend the chief kinds of holi-

ness, we make the following divisions:
(1) Original tabu may be continuous or intermittent. (a) Certain men, animals, things, and actions are always charged with holiness, and are therefore tabu. Such are shamans, priest-kings, and others. A chief in New Zealand was charged with holiness to such a degree that no one was allowed to touch him, even if he were in mortal danger. If he breathed on a fire, it could not be used for cooking. The vessels from which the Mikado used to eat were, as a rule, afterwards destroyed. If another man ate food from them, his mouth and throat would swell. Sometimes an animal is tabu for a whole people, as the pig in Syria, and the cow in Iran and India. Sometimes the tabu extends only to a clan or a kindred. Words are tabu, such as names of higher human or divine beings, holy or dangerons animals. Occasionally we find a whole tabu language, which is learnt at initiation, and used on special occasions, as in the mysteries, in the chase, in fishing, in reaping, and in war. Objects and places belonging to the sacred rites, and on to holy man or search sociation are taken. to gods, or to holy men or secret societies are tabu. The holy man or animal is divine, and is worshipped in proportion as real worship is instituted and the notion of divinity evolved. They may be worshipped even during life, but especially after death, when the general awe of ghosts enhances the covertion of their many. Sometimes the the conception of their mana. Sometimes the holy power of a man is detected only after his death, through actions attributed to his soul. Such a tindalo receives worship amongst the Melanesians (Codrington, 125 ff.); other dead people are forgotten. So also the Veddas in Ceylon are concerned to know whether a dead man's spirit is a yaku, i.e. a powerful or holy one whom reverence and prudence bid them worship (C. G. and B. Z. Soligmann, The Veddas, Cambridge, 1911). The same idea underlies the system of relics and the worship of saints in higher religions. Their holy, wonder-working power is utilized and duly revered.

Certain days are full of danger. Work, pleasure, and undertakings which are carefully specified

extent, in Roman heathenism, 'holy,' instead of yielding place to 'clean,' became the chief term, because the awe and dread remained in or were introduced into the feeling towards the divine.

(c) Especially in Semitic cult and piety the Godhead appeared as an overwhelming power. is nowhere felt so strongly as in Mosaism (with its descendants). Notwithstanding the emphasis laid upon morality in the prophets from Moses onwards, 'holy' was never displaced by 'clean' or iden-tified with it. The moral feeling contributed to widen the gulf between holy and unclean. The supernatural and active power in the Godhead worked still more in this direction. Here the divinity hecame 'holy' in an emphatic sense. Between the holy and the unclean an intermediate realm was left of indifferent and permitted, i.e. 'profane' (or 'common') and 'clean' things, with a tendency in 'common' to decline to 'unclean,' and holv

in 'clean' to rise towards 'holy': clean common

unclean.

But even in those passages in the OT where this process has advanced furthest, it never identifies 'holy' and 'clean.' 'Holy' is too mysterious, powerful, and divine; God's holiness, being His own essence, not primarily His relation to men (cf. Ezk 3622), implies danger; there is nothing so much to be feared as the divine. Here not every danger inherent in the tabu has been banished to the unclean. The being not to he treated lightly in OT religion is, above all, Jahweh (Ex 19, Is 5<sup>16</sup> 6<sup>3</sup>, Jer 2<sup>3</sup>, Ezk 20<sup>41</sup> 38<sup>162</sup>, and passim). Tabu-holiness has made its most important contribution to the history of religion by finding room for the aweinspiring, supernatural, and yet active character of God characteristic of Mosaism. A reciprocal action was exercised by the idea of holiness and by

the Mosaic-prophetic conception of God.

12. Pure.—In the Avesta, as well as to a great extent in India, the chief concern, as regards tabu, is not to pollute the clean by the unclean. The tabu 'holy' has lost its inherent superhuman awfulness and power. There is no instance of a man heing visited with immediate destruction, without interference of man or society, through coming into too close contact with the holy-tahu. The words that come nearest to the idea of personal holiness (Skr. ritavan, Avest. asavan) do not suggest any tahn or snpernaturalness. not holy, has become the characteristic word of religion. In such Indian languages as have not borrowed the word and the conception from the borrowed the word and the conception from the Arahs, Christian missionaries are at a loss to express 'holy' in its proper sense. The Skr. word suddha, parisuddha (and its later forms), 'pure,' 'clean,' as a translation of 'holy' in 'Holy Ghost,' the threefold 'Holy, holy, holy' (Is 63 etc.), transfers the idea from the sphere of Biblical to that of Indian religion. The same term, 'pnre,' is used in India for 'saint,' e.g. in the names St. Matthew and St. Paul. Man has more to say, the divine-tahu less. We may compare the Talmudic 'Holy Scriptures defile the hands' with the anxiety of Parsi mobeds lest the glance of an infidel should of Parsi mobeds lest the glance of an infidel should defile their holy Scriptures. The holy-clean must be protected rather than the holy-dreaded. The mysterious awfulness of Jahweh has no analogy in the Avesta, where everything was divided between the Good One and the Evil Terrible One. Even Brahmanism retained more of the mystery of tahu than Avestism. To both, cattle are tahu-holy, i.e. they must not be killed; they are nuclean after death, and thus may not be caten. In India, only Pariahs eat the dead cow (which is often given as wages for work). Among both peoples the cow is revered.

'Scratching the back of a cow destroys all guilt, and giving her to eat procures exaltation in heaven. In the urine of cows dwells the Ganges, prosperity dwells in the dust (rising from their couch), good fortune in cow-dung, and virtue in saluting them' (Inst. of Vignu, xxiii. 60 t. [SBE vii. 105 t.]).

But the holy hulls and cows (of Siva, a secondary

connexion), feeding in the temple-precincts or strolling in streets and market-places and allowed to do as they please, are unknown to the Parsi system. This irrational residue of the tabu-holiness has its counterpart in the Avesta, in an enhanced cleanness of cows. Thus tabu, apprehended as danger, becomes either holy or unclean, if it does not keep its undifferentiated character. Tabu, apprehended as valuable power, hecomes, as we have seen, e.g., in the OT, 'holy.' But it can also take another direction. The valuable thing or heing may get rid of its mysterious danger and hecome directly clean—not clean in the sense of allowed (noa, hôl), but clean in an accentuated, concentrated sense. This is typical of holy-clean in the *Vendīdād*, our second main witness (besides the OT) to the evolution of tahu. We have already mentioned the twofold cause: the strict theological division of all existence into the Good (clean) and the Evil (unclean), and the practical aims-care of cattle and pastures and an ordered life-which inspired the prophet of this religion. Almost the only instance of anything like original tabu-holiness is furnished by the haoma (q.v.), which, when prepared, i.e. fully sanctified and powerful, cannot be defiled by a corpse (Vend. vi. 43). Here the difference comes out between the clean, which must be guarded against pollution, and the mana-

charged holy, which is affected by nothing.

Beings and things exalted above the ordinary through their cleanness, but devoid of the awe of holiness, are: (1) the cow (Ys. xlviii. 6; Vend. iii. 2 ff.), the dog extolled above man (Vend. xiii.; cf. iv. 40, vi. 1, xv. 45, etc.), the hedgehog, the otter (Vend. xiv.), and in a lesser degree other animals (Vend. xvii. 9, xviii. 15 ff.); (2) the elements: the earth, fire, water, the purity-holiness of which explains the exposure of corpses to be eaten by animals, a practice which involved a special impurity to the Greek mind (Soph. Antig. 1017); (3) plants; (4) the objects helonging to the holy service: the barsom (q.v.), the bowls, the mortar, and the sacred formula.

All these things must be guarded against pollution. At the same time they possess an intrinsic power to purify and to restore purity, but less effective than that of the haoma. The urine of the cow is used, as in India, as a means of purification (Vend. xix. 21 ft.). If a cow has eaten of a purification of the cow has present the head of the part of the proof of the company of the period of the corpse, she becomes pure of herself after a year (vii. 76 f.), whereas a man in the same case must be put to death without any possibility of purification (vii. 23 f.). As to the dog, the purifying look, the sag-did (see DEATH [Parsi]), seems also to be an attribute of the corpse-devonring birds (Vend. vii. 29 ff., viii. 16 ff.). Sometimes the cating (viii. 99 ff.), sometimes the look (ib. 16), appears to be the means by which these animals lossen the impurity of corpses. Since all animals belong either to Ahura Mazda or to Anra Mainyn, there are many that take part in the fight against the devils; all the animals of Ahnra Mazda are clean; but we can still trace something of an original tabu in the still trace something of an original tabu in the extra cleanness and purifying power of some of them. The same clean power resides in the clements. Clothes infected by a dead hody are rubbed with earth to be cleansed (Vend. vii. 15). The cleansing capacity of fire is universal. A corpse that has been exposed to the light of the sunduring one year can work no more harm (vii. 45f.; cf. v. 13). Water is used against uncleanness everywhere. It has the power of purifying itself when it has rained on a dead body (v. 19). Ir

India, purification is effected by water, earth, air, sun, etc. (Inst. of Visnu, xxii. 88, 91). There also earth has a special cleansing power (Manu, v. 136). Hot water mixed with sulplur and golddust has the power of revealing guilt (Vend. iv. 46, 54), and so has the well-known ordeal by melted metal. The tests by water and by fire occupy an important place among the ordeals prescribed by Indian law ('Quotations from Nārada,' vi. [SBE xxxiii. 247 ff.]). The holy formula, which purifies with water and fire (Vend. viii. 72, xii. 2), is necessary against destruction (Vend. xix. 8f.; cf. xviii. The position and practical character of the clean-holy in the Avesta are seen perhaps most clearly in a fifth group of things and actions, which work against impurity, the weapon of the devils. Something of the same practical sense is occasionally found in the agricultural Indian lay society:

'Among all modes of purification, purity in (the acquisition of) wealth is declared to be the best; for he is pure who gains wealth with clean hands, not he who purifies himself with earth and water' (Laus of Manu, v. 106 [SBE xxv. 187]). 'Of all pure things, pure food is pronounced the most excellent.' The learned is also purified by forgiveness of injuries, by liberality, etc. (Inst. of Vignu, xxii. 891; Manu, v. 107). But austerities, the renouncing of the world (Inst. of Vignu, xxii. 91), and abstinence (Manu, v. 159) belong to a higher state of purity and religion.

and religion.

In the Avesta the point of view is more consciously conceived and more consistently carried out. A house with priest, cattle, woman, children (Vend. iii. 2, iv. 47), the cultivating of corn, grass, fruit-trees, irrigating and draining (*Vend.* iii. 4, 23 ff., 30 ff.), good appetite (iii. 33, iv. 48), the giving of food (xiv. 17) and other gifts (iii. 34 f.), the filling np of the burrows of Anra Mainyu's animals (iii. 22), the building of bridges (xiv. 16), etc., are co-ordinated as purifying means with, e.g., the holy power of the cow and the dog. Likewise the unclean is assimilated to acts injurious to industry

and culture. There is a stock of tabus common to Brāhmanism and Avestism (see, e.g., the Laws of Manu, v., and the Institutes of Vișnu, xxii. ff.); but the difference becomes obvious (a) in that more consistent utilitarian tendency of Avestan purity which, of course, is not carried out, but permits many barbarons taburites, e.g. at child-birth, to remain; (b) in the high appreciation of purity, cleansing, yaozhdao, which is considered already in the Gathas (Ys. xlviii. 5) as the greatest thing next to birth (Vend. v. 21, x. 18); the law of purity is the foremost word (v. 24 ff.); the devils tremble before the man that smells of purity after death (xix. 33); and (c) in the dualistic systematizing of clean and unclean. Something of the same process occurs in the OT. The gloomy character of the tabu-day gives place to the rest (Ex 2010, Dt 512-14) and the delight (Neh

89ff.) of the Sabbath.

13. Exceptions to tabu-rules are due, in most cases, to practical considerations. The claims of real life prevail to a certain extent over the rule of infection by tahu-holy (Hag 2<sup>12</sup>) or tahu-unclean (Lv 11<sup>862</sup>, but see Hag 2<sup>13</sup>). According to *Vend.* v. 3 f., a bird that has eaten of a corpse does not defile the tree on which it perches; v. 6f., infection of the dead brought by wolf or fox does not spoil the irrigated field; viii. 34, a dried corpse does no harm; vii. 71, a woman may drink pnre water although she has brought forth a still-born child. The motive is assigned in Vend. v. 4: otherwise the whole of the created world would become polluted, because innumerable creatures die. In the case of the cow becoming clean of herself in one year (*Vend.* vii. 76f.), we cannot decide whether this is due to her own dynamic purity or is an exception for practical reasons. To the same category belongs the nniversal rule that the corpse of a clean animal does not defile (cf. Lv 5<sup>2</sup> 11<sup>11</sup>). According to Indian

law, the hand of an artisan, things exposed for sale in a shop, food given to a Brahman (if not by a Sūdra), or food obtained by begging, which a student holds in his hand, the mouth of a woman in the process of kissing, a bird in pecking fruit, a dog when catching a deer, and flesh of animals killed by a dog, etc., are always pure notwithstanding the logic of tabu-infection (Manu, v. 129 ff., Inst. of Vișnu, xxii. 48 ff.). Carpenters and other workmen are not to be hindered in their work by defilement. To the group of practical exceptions belongs also the rule that impurity does not arise when the whole country is afflicted with a calamity, or in times of great public distress, such as an epidemic or a famine (Inst. of Visnu, xxii. 51, 54 f.). In these instances the pedantry of laws of cleanness is temporarily abrogated by the hard necessities of life. Quite different are the exceptions noted in the Avesta which are due to the logic of dualism. The corpse of the asavan (holy, pious man) is unclean, because his death means a defeat to life and holiness. On the other hand, the wicked becomes pure after death: his death is an advantage; the infection of a dead body diminishes with the holiness of the man during his life until it disappears in the case of the nngodly (Vend. v. 35 ff., xii. 1 ff.). For that reason a dead dog is impure (vi. 1). On the contrary, there is the clerical exception in Brāhmanism of the priest Brähman being so holy as to remain clean also after death. The indwelling holy power overcomes impurity in different degrees according to its strength. The impurity lasts ten days for a Brāhman; it lasts twelve for a Ksatriya, fifteen for a Vaisya, and a month for a Sūdra (Manu, v. 83). On several occasions the indwelling power is exempt from any defilement. The taint of impurity does not fall on kings, at least while engaged in the discharge of their duties; on devotees performing a vow; or on a man engaged in a sacrificial ceremony (Manu, v. 94; Inst. of Visnu, xxii. 48 ff.). When the ceremonies connected with the installation of the monument of a deity or marriage rites have begun, impurity is powerless—it cannot arise (Inst. of Visnu, xxii. 53). The explanation of the fact that no impurity attaches to the king-viz. because he incarnates the eight guardian-deities of the world, who cause and remove purity and impurity of mortals (Manu, v. 96 f.)—is evidently of a secondary character; the real reason is found in his own power of holiness or in the claims of practical life.

14. Holiness and morals. — In the tabn-interdicts, what we call moral rules and ritual or 'superstitious' commandments are intermingled without any attempt at differentiation. In the Congo the laws belonging to the fetish Mbuzi contain such prescriptions as not to eat newly slanghtered meat, not to steal, not to lie, not to stand upright when stirring the contents of a pot, not to whistle in the twilight, not to drink palmwine without having a cap on the head (E. Nordenskiöld, pp. 123, 146). Amongst the rules prescribed for a snātaka, a young Brāhman who has just completed his studentship, are, e.g., not to carry water and fire at the same time, not to drink ont of his joined hands, not to step over a rope to which a calf is tied, always to speak the truth, to conduct himself as an Aryan, to take pleasure in the Veda, never to hnrt any being, to restrain his senses, etc. (Gautama, ix. [SBE ii. 218 ff.]; cf. Apastamba, i. 11. 30 [SBE ii. 92 ff.). In ch. 125 of the Egyp. Book of the Dead the departed protests his purity: 'I have not oppressed the feeble one . . . I have not degraded anybody . . . I have not let any one hunger . . . I am not a murderer . . . . The ritual of the Great Purification, O-harai, in Shinto ceremonial, counts

among 'heavenly sins': to destroy the divisions between the rice-fields, to put sticks in the rice-fields, to flay living animals backwards; and among rearthly sins': leprosy, incest, snake-bite, killing the cattle of another, soreery (H. Weipert, 'Das Shintogebet der grossen Reinigung,' in Mittcil. der deutschen Ges. für Natur- und Völkerkunde Ostasiens, 1901, Suppl.; E. Satow and K. Florenz, 'Aneient Japanese Ritnals,' in TASJ vii. ix. xxvii. 1). Similarly, the Law of Holiness in Lv 19 includes fear of mother and father, prohibition of includes fear of mother and father, prohibition of theft, of deceit, of lying, as well as prohibitions against eating anything with the blood or round-

ing the corners of the bead.

The tabu imperative covers a very wide area in primitive and harbarons culture. In higher civilization a process of reduction takes place. At the d. The same time the idea of obligation is deepened. separation of ethics from ritualistic rules helongs to a higher moral appreciation of holy and un-clean, represented in Greece and Rome by thinkers and poets from Heraclitas (frag. 5, in H. Diels, Fragmente der Vorsokratiker<sup>2</sup>, Berlin, 1912, i. 78), e.g. Diogenes of Sinope (cleansing water cannot take away a moral fault any more than a grammatical blunders will an initiated this beau matical blunder; will an initiated thief bave a hetter lot in Hades than Epaminondas? [Diog. Laert. vi. 2. 42]; Cicero, de Leg. ii. 10. 24: 'animi labes nec diutninitate evanescere nec omnibus ullis elui potest, etc.). These protests probably referred to the cathartics of the Mysteries (q.v.) and of Orphism (q.v.). Orphism started as a special, higher 'holiness,'  $\alpha\gamma vela$ . Primitive tahu-rules on food, clothing, sexual life, etc., were revised and united into an ascetic and pedantic 'orpbic life,' destined to secure a happy life after death. This was the theory of the great Pythagoras also, with whom a higher morality prevailed. In opposing the later purifying Orphic charlatans, and in taking cleanness in a purely moral sense (=righteousness [Ren. 3641). Plate appared the assetic tendency of [Rcp. 364]), Plato enhanced the ascetic tendency of the Apollonian, Orphic, and Pythagorean eathartics (the soul must be delivered from the body even in this life through spiritual occupation, 'philosophy,' and completely after death [Phædo, 66 ff.]), and the religious character of ethics as a means of salvation and happiness in the life to come (Phado, 86 ff.; a more positive appreciation of morals prevails in the *Rep*. and other dialogues). The moralization of holiness and cleanness is urged in the oT hy Amos and other prophets, and distinctly stated hy Christ (Mk 7<sup>15π</sup>). The general principle of Lv 19, ctc., 'Ye shall be holy: for I the Lord your God am holy,' is repeated in I P 1<sup>16</sup>, but applied to moral behaviour (ἀναστροφή, v. <sup>15</sup>), and the quotation 'holy people' in I P 29 has no ritual meaning. The paradoxical claim laid on the wholo people to be holy (see above, § 1) receives a new and higher significance in this way, and can be fulfilled without any limiting or clericalizing of life.

In India, Buddha opposed an ontward and nonmoral conception of purity. At the end of the Dhammapada, a set of verses explain what it means

to be a true Brāhman: 'A man does not become a Brāhman by his platted hair, by his family, or by birth; in whom there is truth and righteousness, he is blessed, he is a Brāhman. What is the use of platted hair, O fool! what of the raiment of goat-skins? Within thee there is ravening, but the outside thou makest clean.' (Dhammap. xxvi. 393 fl. (SBE x.2 pt. i. p. 91)).

According to the Sutta-Nipāta, Kasapa explained the sin of estima you flesh (Emagandic) in

plained the sin of eating raw flesh (amagandha) in

Destroying living beings, killing, cutting, binding, stealing, speaking falsehood, fraud and deception, worthless reading, intercourse with another's wife, this is amagandha, but not the cating of fiesh. 'Neither the fiesh of fish, nor fasting, nor nakedness, nor tonsure... purify a mortal who has not conquered his doubt' (Sutta-Nip. il. 2 4 [241], ii. 2 11 [248], in SEE x.2 pt. ii. p. 32 fl.).

In Buddhist polemics against Brahmanism the question of purifications always played a part: if water could cleanse from sins, frogs and tortoises, water could cleanse from sins, frogs and tortoises, water-snakes and dolphins, would get to heaven and be happy. The title of the Pāli work, the Visuddhi-magga of Buddhaghosa, 'The Way of Purity,' has nothing to do with ritualistic purifications (H. C. Warren, Buddhism in Translations, Cambridge, Mass. 1900, passim; M. Winternitz, Gesch. der ind. Lit. II. i. [Leipzig, 1913], p. 164 ff.). The momentons step in the evolution of holiness and purity consists in this, that holiness becomes and purity consists in this, that holiness becomes a personal quality of the deity and of man, instead of being a substance in things as well as in wills. evolution is favonred by autonomons moral refinement, as in Greece, India, and China, and also by the preponderating conception of the deity as an ethical will, as in Mosaism. The later process bas had the greater importance for the internal history of religion. As to man, 'boliness' retained its aspect of something supernatural and divine in the NT, not withstanding its being moralized and personalized. In its essence, holiness does not depend on man, but is a divine influence. But the making holy of man by God obliges man to strive for perfection. Holy means 'good,' 'perfect' in an ethical sense in so far as religion implies ethics. It is used of God (Jn 1711), His name (Lk 149), the city (Mt 45), and temple (1 Co 317) connected with His service; of Christ (Mk 124); the angels (858); of the prophets (Lk 170), the men (Mt 2752) and women (1 P 35) of old: of John the Rantist (Mk 620); and (1 P 35) of old; of John the Baptist (Mk 62); and of Christians as God's sacred property and servants (Ro 17, 1 Co 12, 1 P 25), bound, therefore, to purity in life (Eph 14, 1 Co 611). The language is ritualistic (Ro 121 1116 [firstfruit, see above, § 7 (c)], Jn 103 1710); the sense is personal and moral, but it is entirely kept under the sway of religious

15. In the Church 'boly' never became a merely ethical word, but chiefly suggests divine, supernatural power. The original meaning of sancire and sanctus in the heathen Roman language recalls tabu, 'well defined,' 'particularly marked,' as far as sancitus, sanctus meant definitus, destin-atus, determinatus (G. Link, De vocis sanctus usu pagano, Königsberg, 1910, p. 9). It was nsed of things, places, and men, withdrawn from the common and ordinary (see helow, 'Roman's section). In early Christianity all the faithful were called 'saints,' bccause they had been selected and separated by God from the worldly life and common humanity which meant also essentially a moral change and a severe moral obligation. But the word sanctus severe moral obligation. was used especially of the departed brethren and of the martyrs, over whose remains altars were erected as centres of divine holy power as well as of pious commemoration. Later on, sanctus indicated the religious dignity of the religiosi, monks and priests. In the 5th and 6th centuries this honourable title was usually reserved for the bishops, until the word 'saint' finally received the sense if has kept in the Roman Catholic Church-that of one who receives and also deserves the general veneration of the religious community. The reveneration of the religious community. The re-cognition of a dead believer as a saint depended upon the verified fact that he had had a festival of his own for a long time past, that his tomb had been held in special honour, etc. (H. Delehaye, 'Sanctus,' in Analecta Bollandiana, Brussels, 1909, xxviii. 145 ff.; cf. Les Origines du culte des martyrs, do. 1912). When the Church became more serupudo. 1912). lous about the dignity of saint and began to submit the claims to it made by local heroes of picty or of some religions genins to a regular Roman commission, primary importance was, and is still, attributed to miracles performed by the alleged holy person before or after his death.

Here we encounter, in a higher sphere, the same test as is applied by primitive peoples—to learn whether the departed possesses the power of holiness or not (cf. above,  $\S 9$  (1) (a)), whether his bones, when touched, or his soul, when invoked in prayer, are capable of healing sick people, revealing guilt, and accomplishing other wonders. The chief question about holiness is not: Did he or she attain to moral perfection? but, in fidelity to the essence and tradition of religion, Was there something divine or supernatural about the man? (cf. P. Chauvin, Qu'est-ce qu'un saint? Paris, 1910). We may refer to the important rôle played in the process of canonization of Joan of Arc (introduced in 1869, ended by the decree of Pius X. on 11th April 1909) by certain healing miracles performed by her on nuns who implored her help, even at the end of last century. The underlying thought is that holiness means revelation of divine power. Only religion might recognize that supernatural manifestation, not in cases of auto-suggestion or the like, but in creative genius, high personal idealism, and ready obedience to the mysteries of divine guidance and to vocation. Joan of Arc could well stand that more severe test. See, further, HOLINESS (NT and Christian).
16. Holiness has had its most notable history in

Western civilization with its antecedents. There it has become the greatest word in religion, the last word of piety so far, as well as the first. Western observers, who form their conception of religion from Biblical or Islamic examples of piety, have often been struck by the relative absence of awe in Eastern religions. In the West (using this term in a wide sense, to include Persia; cf. Wassing the County of the Property of Change lieff-Conrady-Stübe, Die Erschliessung Chinas, Leipzig, 1909, § 51) the unwcakened sense of the 'holy' has accompanied religion all through its history and has gained strength on the heights of religious experience. But at the same time magi-cal practice and 'superstitious' feelings, which still survive in modified forms in the lower strata of civilization and in highly cultured and delicately organized minds, still draw their nourishment from

a primitive conception of the holy

17. The imperative and unconditioned character of the holy, being anterior to any definite idea of divine commandments (cf. K. T. Preuss, 'Der Ursprung der Religion und Kunst,' in Globus, lxxxvi. [1904] 321 ff., 355 ff., 375 ff.), cannot be derived from it. Nor has it originated in presented in the control of the control cautions for the soul (§ 5), nor in calculations of negative magic (§§ 6 and 7) or of hygiene. To say that the categorical tabu is an initial mistake of humanity (§ 8) gives no explanation, only an appreciation. The time-honoured sociological theory recognizes the momentous importance of society to religion. But, as far as lower culture is concerned, the derivation of the holy institutions and beings from a mysterious apprehension of society seems to be artificial. In the higher culture, holiness and mysticism most consciously put their ideals beyond society. According to the history of religion itself, the conception of the tabu results, as we have seen, in the idea of the supernatural.

Literature.—This is indicated in the article. See also T. Wächter, Reinheitsvorschriften im griech. Kult. Glessen, 1910; E. Fehrle, Die kultische Keuschheit im Altertum, do. 1910.
NATHAN SÖDERBLOM.

HOLINESS (Greck). - In its ordinary 'holiness' is a word both of religious and of high ethical significance. But, while it is always a religious word, it has often little or no ethical content. Thus, in primitive religion, holiness is often conceived as physical though dephttess with often conceived as physical, though donbtless with an implicit sense of something deeper. It is an essentially physical quality inherent in persons or things reckoned divine, or, on the negative side,

it is freedom from bad spirits, which are conceived as physical, and against which physical precautions are taken (W. R. Smith, Rel. Sem., London, 1894, p. 161; J. E. Harrison, Proleg. to the Study of Gr. Rel., Cambridge, 1908, pp. 39, 165, etc.). Sometimes, again, 'holiness' indicates what is merely formal, as the relation in which a particular place stands to a divine being or a restriction paper. stands to a divine being, or a restriction upon hnman freedom to enter within it (W. R. Smith, 118, 150). It would be easy to illustrate these nonethical conceptions, as well as the tabu customs founded upon them (cf. Söderblom's art. HOLINESS above), from the history of Greek, especially primitive Greek, religion. But in the present article we shall deal only with the higher conception of holiness, meaning thereby, on the one hand, the moral perfection of God, and, on the other, human goodness viewed in relation to God. How and how far did the idea of holiness, as thus defined, enter into Greck religious thought?

I. Greek national religion.—From at least as early as the Homeric age two contrasted types of worship prevailed in Greece. The one was directed to the sunny deities of Olympus, the other to the gloomy chthonian, or nnder-world, powers (cf. W. M. Ramsay, in *HDB* v. 143). The latter is nsually regarded as the earlier of the two, and, though it never became a part of the national religion, was preserved in local cults throughout the historic period (cf. Harrison, p. 11, and passim; L. R. Farnell, CGS, Oxford, 1896-1909). In spite of In spite of serious defects, it contained much of ethical value, which, as we shall see, entered into later Greek religious thought. Meantime our concern is with the religion which centred in the Olympian gods and goddesses. Canonized by Homer and Hesiod, these became the objects of national, or pan-Hellenic, as distinct from merely local, worship.

For our present purpose we may consider this national religion, first in its popular, and then in

its literary, aspect.

(1) Popular religion.—The Greek religion was one of easy trust in the gods, of simple and serene piety. It was satisfied to acknowledge the blessings of the gods by the payment of traditional observance. Such a religion was prone to become 'the art of giving something in order to get more in return, a species of higgling in the celestial market' (F. B. Jevons, Introd. to Hist. of Rel., London, 1896, p. 224), and this is in fact the account given by Socrates in the Euthyphro (Plato, Euth. 14 E) of the current conception of holiness (ἐσιότης). Plato may have rated the popular religion too low (cf. F. B. Jevons, Introd. to The Makers of Hellas, by E.E.G., London, 1903, p. xxiv). Its sacrifices must often have expressed real gratitude. But it is certainly true that the idea of moral purity, as a matter vitally affecting man's relations to the gods, was foreign to the spirit of Greek religion. That spirit was essentially one with the spirit of Greek art, which derived its inspiration not from the snpernatural, but from the visible, world. Hence the Greek gods were but magnified men, superior, as G. L. Dickinson points out, in external gifts such as strength, beauty, and immortality, but not in spiritnal or even moral attributes. This being so, the average Greck did not trouble about his spiritual relation to the gods. 'To the Puritan, spiritual relation to the gous. To the Furitan, the inward relation of the soul to God is everything; to the average Greek, one may say broadly, it was nothing' (Dickinson, The Greek View of Life, London, 1896, p. 18). Greek thics no less than Greek religion was dominated by the artistic spirit. And hence human goodness meant to the Greek, not indeed a relation to the gods, but an inward harmony. 'The good man was the man who was beautiful—beautiful in Soul' (ib. 134).

(2) Literary ideals.—Here we shall consider

chiefly the moral aspect in which the gods are presented to us in Greek literature. In Homer and Hesiod, from whom popular religion drew its chief inspiration, we can hardly be said to find any idea of divine holiness. It is true that Homer often presents the gods, especially Zens, in a noble and even sublime moral aspect. He and Hesiod habitually regard them as the champions of Instice, whom the latter even describes as the daughter of Zcus (Opp. 254). Yet their conduct, as reflected in the myths, is often an outrage upon morality. And the reason is that moral perfection was not felt or seen to be an essential part of the divine nature. 'Never,' says Nägelsbach, speaking of Homer, 'is an epithet applied to the Godhead, indicating a consciousness similar to that with which the Bible speaks of the holiness of the true God' (Homer. Theologie', Nüremberg, 1861, p. 31). But as time goes on we meet with deeper conceptions of the divine nature. Not only is polytheism gradually purged of its grosser elements, not only is there an approach to monotheism in the more assured supremacy of Zeus over the other gods (J. Adam, Relig. Teachers of Greece, Edinburgh, 1908, p. 83; J. P. Mahaffy, Social Life in Greece, London, 1875, p. 94), but Zeus is himself regarded in a more spiritual aspect. This is particularly true of Eschylus and Sonlocks. In Eschylus we find Æschylus and Sophocles. In Æschylus 'we find an ideal of divine righteousness which is strikingly parallel to that of Hebrew prophecy (L. Campbell, Relig. in Gr. Lit., London, 1898, p. 380). Sophocles, on the other hand, comes nearer the Christian standpoint in the more gracions aspect under which standpoint in the more gracious aspect under which he views the divine justice. 'Zeus is no longer solely the awful dispenser of doom, but "he hath Mercy for the partner of his throne" (A. M. Adam, in Early Ideals of Rightcousness, Edinburgh, 1910; Soph. &d. Col. 1298; cf. Phil. 196). The idea of divinc purity, however, was especially associated with Apollo (L. R. Farnell, in HDB v. 145). And the growing conception of the divine nature is measured by the purity which Apollo demanded of his worshippers. At first it was freedom from homicidal guilt, and such as could be attained by ritual; later it was viewed as inward, and as extending to all the relations of life (ib. 145, 147; E.E.G., Makers of Hellas, p. 335ff.; cf. esp. the story of Glauens, in Herod. vi. 86).
Mystical conceptions of holiness.—From the

ideas of holiness proper to the national religion we pass to others, different in kind, and likewise more profound, which flourished during the period of its decadence. Before considering them, however, in detail, we have to ask how the phase of thought from which they sprang entered as a powerful, though not, as we shall see, a wholly new, factor

into the religious life of Greece.

In the 6th cent. B.C. the Greek colonics of Asia Minor were profoundly stirred by a new spirit of religious mysticism, which probably came to them from the Semitic peoples (cf. W. R. Smith, 358), and also by a new spirit of philosophic inquiry. These influences were widely diffused by various teachers, and by the end of the 5th cent. had revolutionized the religious thought of Greece. It was, says Campbell, 'one of those epochs in the history of our race which mark a wide-spread access of spiritual vitality' (p. 127). Greek philoaccess of spiritual vitality' (p. 127). Greek philosophy was undermining traditional belief in the more thoughtful minds. And side by side with the intellectual awakening there was a 'deepening sense of guilt requiring atonement, of pollution crying for purgation' (ib. 128), which many sought to satisfy, partly by an ascetic discipline, and partly by mystical rites, including a sacramental meal, which was regarded as an act of union with the divine. Such, as far as we need describe it the divine. Such, as far as we need describe it an aspect foreign to Orphism—belonged essentially, here, was the character of the Orphic movement, as he does in this his Orphic aspect, to the class of

which powerfully affected Greek religions life from the 6th cent. onwards. Although it probably owed much to foreign influence—including its chief mystery, the sacramental feast—yet Orphism appealed to a religious instinct already potent in the old chthonian religion, previously mentioned, namely, to its profound sense of evil, seen in the eonception of the Erinyes (q.v.; cf. Harrison, 6, 29, 213), and in rites of purification (ib. 24-29, 162). It should be added that philosophy and mysticism were to a large extent but two aspects of a single movement. Orphism had its speculative side, while philosophers like Pythagoras and, at a later time, Plato were steeped in mysticism. There can be no doubt that speculation and mysticism had much to do with the growing spirituality of the national religion (cf. *HDB* v. 147), but they were both foreign to its spirit. We have now to examine conceptions of holiness which were essentially mystical, though they were to some extent reflected in Greek philosophy.

In doing this we are directly and chiefly coneerned with the human aspect of holiness. true that Greek philosophy sometimes lays stress on the goodness of God. Thus we find in Plato (Rep. ii. 379 A) that the fundamental duty prescribed for teachers of the young is to represent scribed for teachers of the teachers of the property of the first entirely of God as He really is, and that the first article of their teaching must be that God is good. But there is nothing in such teaching that might not have been applied to the Zeus of the national religion. It is true also that a deepened conception of the divine nature is involved in Orphism; but as this, like all mystical religion, is primarily concerned with inner experience, we shall discuss it rather in

connexion with the human aspect of holiness. (1) Holiness as likeness to God.—Humanly regarded, holiness is more than goodness. It always involves a relation to God. But the relation, and with it the nuance of the idea of holiness, varies. Perhaps its most familiar implicate is that of likeness to God. The conception became prominent in Greek religions thought chiefly through the teaching of Pythagoras and of Plato. Probably Pythagoras owed it to the influence of the mysteries, as it is closely related to the essential kinship of the human and divine natures, which is a cardinal doctrine of Orphism. The Pythagorean ethical doctrine . . . has a thoroughly religious character: to follow God and to become like Him is its highest principle' (Zeller, Pre-Socratic Phil., London, 1881, i. 491; cf. also E.E.G., 335, W. H. S. Jones, Greek Morality in relation to Institutions, London, 1906, p. 7, and authorities cited by these two writers). The same doctrine, which is hinted at by Socrates, occupies a prominent position in the teaching of Plato, whose 'conception of the ethical end . . . is "assimilation to God"—δμοίωσιs τῷ θεῷ' (J. Adam, 401; cf. also p. 18, and Jones, 155; for Plato, cf. Theæt. 176 B, Laws, 716 C, Tim. We cannot here attempt to trace fully the influence of this idea in Greek literature, but we may add that it is reflected in the cardinal doctrine of the Stoics, that man should live according to Nature—which, in their view, was only another name of God.

(2) Holiness as communion with God.—But, again, the relation to God implied in holiness is often thought of as communion. This aspect of often thought of as communion. holiness is represented in the mystic union with his god which the Orphic regarded as the goal and crown of the spiritual life. The god in question was Dionysos Zagreus, who was born again after his dismemberment by the Titans. And it is significant that Dionysos the week admitted to the significant that Dionysos, though admitted to the Olympic pantheon in his character as a wine-god-

chthonian powers. Like the worshipper in that old religion, the Orphic sought deliverance from evil, but his conception of evil was more ethical. And, while to the former purity meant freedom from divine anger, to the latter it meant nnion with the divine life. Holiness in this high Orphic sense is doubtys. The words drues and lepts also refer to holiness, the holiness that comes of consecration—in the former case, to the powers of the lower world, in the latter, to those of Olympus. But in both the consecration is thought of chiefly in its negative aspect, as prohibition or tabu; it is the devotion to unseen powers, in which the idea of the blessing readily passes into that of the curse. On the other hand, bosos and dostorns are words of positive content. Their prevailing sense is that of freedom, which to the Orphic meant freedom from the bonds of the flesh, or moral purity (Harrison, 57 ff., 505 f.). 'Consecration (¿στότης), perfect purity issuing in divinity, is . . . the keynote of Orphic faith, the goal of Orphic ritual' (ib. 478).

We have been dealing with what may be called the mystical aspect of holiness. But in this sense especially holiness may be said to involve the element of love, which is itself an aspect of goodness. It is just here, however, that we see the limitations of the Greek idea of holiness. Even the Orphic, though steeped in the mysticism of love, did not perceive that holiness and love are really inseparable ideas. Accordingly, in actual religion he turned to Dionysos, in mystical dogma to Eros, or Love. Eros is to the Orphic the Creator of all things; especially he is thought of as the source of life, and of life's ecstasy (cf. Harrison, ch. xii.). But he is not a god of holiness; he is a poetical as much as a religious conception. the Orphic did unconsciously associate holiness with love, since he showed that the pathway to both lay through a mystical nnion with the

Orphic views had a deep influence on Greek literature. Of this, so far as concerns our subject,

two illustrations may be given:
(a) Euripides.—Enripides is certainly not to be described as an exponent of Orphism. On the other hand, the *Bacchæ*, whatever may be its rentral motive, is full of Orphic mysticism.

entral motive, is full of Orphic mysticism.

'No other ancient poem shows so rapturous a feeling of the kinship between man and nature. The very hills are "thrilled with ecstasy" in sympathy with the frenzied votaries of the god (Bacch. 726). We feel that Dionysus has become a power pulsating throughout the whole of nature, both inorganic and organic, making the universe into a living, breathing whole; and we are stirred with a new sense of unification with the mystery that surrounds us' (J. Adam, 317). Again, we have the Orphio longing for spiritnal freedom, seen in lines like the following:

'Happy hs. on the weary sea.

Heappy hs, on the weary sea,
Who hath fied the tempest and won the haven.
Happy whose hath risen, free,
Above his striving!'
(Bacch. 901 ff., Murray's tr.).
Finally, Holiness is personified in the chorus beginning Oola πότνα θεῶν (Bacch. 370). It will be seen that she is addressed by her Orphic name seen that she is addressed by her Orphic name, and J. E. Harrison refers to her as 'Hosia, the real Heavenly Justice, she who is Right and Sanctity and Freedom and Purity all in one' (op. cit. p. 507). Nor is her aspect less lofty in Murray's exquisite

free rendering of the opening lines of the chorus:

'Thou Immaculate on high;
Thou Recording Purity;
Thou that stoopest, Golden Wing,
Earthward, manward, pitying,
Hearest thou this angry king?'

That an idea of holiness as high as it is mystical is

reflected in the Bacchæ may be safely gathered from these citations. At the same time, it is important to remember that what we have before us is not a monotheistic, still less a Christian, conception of divine Holiness. The ground note of religious feeling in the  $Bacch\alpha$ , here as elsewhere,

is pantheistic. Holiness is, indeed, personified by the poet, and, so regarded, is one among many divine beings. But in its religions and ethical significance it is simply an aspect, profoundly realized, of the divine running through the whole

(b) Plato.—But the Orphic view of holiness is most fully reflected in Plato, although to some extent modified, chiefly by being rationalized. We have seen that Plato described the ethical end as assimilation to God. But he also tanglit that perfection consists in communion with or participation in the divine, of which, indeed, as J. Adam has pointed out (p. 436), 'the theory of likeness is only a kind of explanatory gloss' (cf. Plato, Parm. 132 D). It is in the Phado that the theory of participation in the divine nature (κοινωνία, μέθεξις, etc.) is most fully developed. In the Symposium, on the other hand, Plato describes human perfection under the imagery of love. It is the soul's marriage with her ideal, or it is the beatific vision of the realities of an eternal world. It must, indeed, be observed that in Plato the soul does not enter into direct relation with the Supreme Being, 'the Good' (cf. esp. Rep. vi. 508 E, 509 B, with Tim. 28 C), but only with the Ideas, to which, however, he also attributes a real transcendental existence (Rep. v. 476 A ff., Tim. 57 D ff.; and Aristotle's account of Plato in Mct. A 6, 987 29-987<sup>b</sup> 10). Again, the relation is predominantly intellectual. Even the love described in the Symposium is primarily an amor intellectualis. But, on the other hand, the Ideas 'are in very truth the Platonic equivalent of Gods' (J. Adam, 431); while to Plato true knowledge, that which grasps the real and abiding, and which is man's highest good, is an act, primarily, indeed, of the intellect, yet affecting also every part of the soul. Lastly, Plato marks an advance on Orphism in that it is one and the same divine being whose perfection the soul shares, and after which its love aspires.

In Orphism and in Platonic speculation we reach the highest Greek conception of holiness. It does not lie within the scope of this article to discuss its obvious limitations. It must suffice to say that the loftier Christian conception depends upon a nobler and more satisfying conception of God, as a supreme Father, who enters into direct personal relations with His children, and whose goodness is

at once perfect holiness and perfect love. LITERATURE.—This is sufficiently indicated in the article.

I. F. BURNS.

HOLINESS (NT and Christian).—I. NEW TESTAMENT DOCTRINE,—The NT continues and completes the most spiritual teaching of the OT prophets and psalmists with respect to holiness (cf. Semitic art.). The background to Christian doctrine, however, is still priestly and legalistic, and many instances of the ceremonial conception of holiness appear in the NT writings. Inanimate things or places, such as Jerusalem, the Temple, the inner sanctuary, the Scriptures, the Monnt of Transfiguration, are spoken of as 'holy' by virtne of their special association with God. Indeed, the whole NT terminology on the subject is directly borrowed from ceremonial sources, in respect of altars, sprinkling, oblations, putting away sin, and the like. But this ritual phraseology is now given an inward spiritual signification, its former given an inward spiritual signification, its former use having been sanctioned only 'until a time of reformation' (He 9<sup>2,10</sup>). Christians themselves must now be veritable temples, priests, vessels, and altar gifts, sanctified for the offering of purely spiritual sacrifices (Ro 12<sup>1</sup>, 1 Co 3<sup>16</sup>, 1 P 2<sup>5</sup>, 2 Ti 2<sup>21</sup>). Thus the emphasis in the conception of holiness becomes increasingly ethical, having advanced from the ontward to the inward, from the negative to the positive, from the merely cere-monial act to the moral and spiritual motive.

monial act to the moral and spiritual motive.

An interesting illustration of the passing of the word ayadges from its ceremonial to its ethical use is seen in 1 Co 714, where the unbelieving husband is spoken of as heing 'sanctified' in the helieving wife. 'Paul wishes to prove that the holiness of a Christian transmits itself torthwith to those who are closely allied to him' (J. Weiss, Der erste Korintherbrief's, Göttingen, 1910, p. 182; see also Ro 1116, 1Ti 44.5). For a study of the Greek terms nsed in the NT to designate holiness and kindred ideas, see HDB, s.v. 'Holiness' and 'Sanctification'; for the extension of the conception of holiness to things and places, see artt. Consecration and Holliness (General and Primitive); and for a discussion of ritual purification as a means of holiness, see L. B. Farnell, The Evolution of Religion, London, 1905, pp. 152-162.

Partly, perhaps, because of these ritual associa-

Partly, perhaps, because of these ritual associations, Jesus makes very little use of the technical vocabulary of holiness. He prefers the prophetie form of expression, 'Be ye perfect, as your Father in heaven is perfect' (Mt 543; ef. Dt 1813), to the more priestly formula, 'Be ye holy, for I am holy'

(Lv 1144).

(Lv 1144).

Jesus avoided almost entirely the usual OT designation of God as the 'Holy One' of Israel, except in the phrase 'Holy Spirit.' 'The reason appears to he that Jesus regarded the Levitical 'holiness'—which many of His countrymen thought to be real holiness—as negative and temporary. True "holiness" is to be applied to spiritual things, and is to be positive, not negative. It is to consist in initating the Holy One, not in washings, nor lu abstaining from meats, but in heing, as He is, "perfect"—that is, perfectly good in will and deed, benevolent and beneficent to all' (E. A. Ahhott, The Son of Man, Cambridge, 1910, p. 5821.; see also O. G. Monteflore, The Synoptic Gospels, London, 1909, it. 522-527).

It is, then, in moral likeness to God that man's

It is, then, in moral likeness to God that man's exfection or holiness consists. The NT has no perfection or holiness consists. The NT has no hesitation in applying the same term to both God and man, and in bidding us be 'holy as he is holy.' God is holy, because, as the absolute moral Reality of the world, separate from all evil and infinite in every excellence, He is pledged by His own nature to secure a perfect and loving righteousown hatthe to seeme a perfect and form righteousness everywhere, even at the cost of redemption. Man is holy when he is brought by grace into that relationship to God by which the Divine righteousness may be honoured and conserved. The progressive ethicizing of this idea constitutes the Biblical revelation, and Christ's advance on the OT teaching in this respect consists in His own unique convention and reprise testing of Cod. Cod. unique conception and manifestation of God. God is the 'Holy Father,' a Being who freely loves and saves His guilty children, not only without any sacrifice of His Divine sanctity, but even by its supreme exercise. This combination of holiness and love in God constitutes His excelling glory. The holiness humbles us and forbids an unethical presuming on His kindness. The Fatherhood attracts us and forbids a despairing dread of His commandments. And the acknowledging of this essential glory of the Father, by a reverent hallowing of His name in life and service, must ever be bound up with the coming of His kingdom and the doing of His will on earth as it is done in heaven.

in heaven.

This characteristic NT association of the holiness of God with the Divine Fatherhood recurs in an important passage, Heb. 127-10, where God is spoken of, in the language of the home, as a Father chastening His children 'that they may be partakers of His holiness.' Here, too, we have a breaking away from the more negative OT view of the Divine holiness. God disciplines us through suffering, that we may enter into that filial relationship of obedient and trustful love (pictas) in which true holiness consists. On the meaning of God's holiness and its relation to holiness in man, see PRE's.v. 'Helligkeit Gottes in AT'; Sanday-Headlam on Ro 17, and Hort on 1 P 115.

Man's holiness thus consists in a perfect moral

Man's holiness thus consists in a perfect moral sonship, the consecration of all his powers and opportunities to the worship of God, and the realization of His gracious purposes in history. Of such a perfect holiness Jesus Christ Himself is the unique example. For this very purpose the Holy Father consecrated Him and sent Him into the world, so that He was holy from the beginning (Lk 125, Jn 1055). To the same purpose Jesus steadfastly consecrated Himself to the end (Jn 1715)

Through an eternal Spirit He offered Himself without blemish to God (He 914). was something more than mere sinlessness. was the full presentation, in the first instance to God Himself, of the moral glory of the Father's own holiness, through the pouring of the Spirit without measure upon Him, and His own perfect obedience to the Father's will—a holiness manifesting itself not in withdrawal from the world, but in a life of perfect love and action among men, and finding its inevitable consummation and ratification in the power of the Resurrection (Ro 1th.). It is in keeping with all this that Christ is referred to throughout the NT as pre-eminently 'holy,' by the announcing angel (Lk 125), the disciples (Jn 659), and the believing Church (Ac 227, He 726, 1 Jn

2<sup>20</sup>, Rev 3<sup>7</sup>).

The supreme test and manifestation of this perfect sanctity of Christ was the death upon the cross. By this erowning act our Lord honoured, secured, and satisfied the Divine holiness as well as perfected His own, on a world scale and at history's moral centre, in a supreme judgment upon and victory over sin, through the sacrifice of an active and complete obedience. By this perfect purification of human guilt (He 13) Christ both fulfilled and abolished the whole sacrificial system (9<sup>28</sup> 10<sup>26</sup>), and became unto men 'sanctification' (1 Co 1<sup>20</sup>), the objective ground or warrant of the believer's new standing of holiness before God. Through the one offering of His body on the cross He 'perfected for ever them that are being sanctified' (àriajouérous), i.e. He effected in principle the complete sanctification of His followers in the eternal future, rendering them independent of every other sacrifice (He 1014).

Further, the holiness of Christ, which conditions that of the Christian, also guarantees it. 'Both he that sanctifieth and they that are sanctified are all of one' (He 211). Being separated unto God in baptism, believers find themselves washed, sanctified, justified in the name of the Lord Jesus (1 Co 611), and, entering into all the privileges of the old covenant on a new plane, they know them. selves to be 'an elect race, a royal priesthood, a holy nation, a people for God's own possession' (1 P 2º, Dn 7¹²). Such believers are already called 'saints,' not because of their attainments, but because of their new standing as regenerated or 'sanctified in Christ Jesus' (1 Co 1²), who is the encompassing sphere, as it were, in which the whole process is begun, continued, and ended. whole process is begun, continued, and ended. Having Him as ἀγιασμός, they themselves are ἄγιοι, earmarked, destined, and set apart from everything profane, as belonging to God and His kingdom, although as yet they may be no more than babes in Christ, or even carnal.

It still remains, however, that this preliminary implicit hallowing of the inmost personality shall become explicit in a holy character and manifest itself in every sphere of daily conduct (cf. Hort on 1 P 115). The Christian must work out in practice what he already is in principle, since deliverance from the guilt of sin through justification involves deliverance from its power through sanctification. There is thus a growth in holiness rather than into it (1 Ti 215). The NT is explicit in emphasizing the cthical nature of true holiness, its contrast to all licence and nucleanness (Ro 619-22, 1 Th 42-7). Christians must consecrate body as well as spirit; and all sins against the body, which is God's temple, are tantamount to sacrilege (Ro 12', 1 Co 615-2'). Stress is also laid on the importance of our co-operating effort and initiative in sanctification (2 Co 7<sup>1</sup>, Ja 4<sup>5</sup>, 1 P 1<sup>22</sup>, 1 Jn 3<sup>3</sup>). Yet the whole process is spoken of as wrought by the Holy Spirit in our hearts (Ro 15<sup>15</sup>, 1 Co 12<sup>11</sup>, Eph 3<sup>20</sup>) in conjunction with our faith (Ac 15<sup>3</sup> 25<sup>13</sup>, Gal 3<sup>14</sup>).

Indeed, the two agencies are regarded as complementary and inseparable (Eph 1<sup>13</sup>, 14, Ph 2<sup>12</sup>, 13, 2 Th 2<sup>13</sup>). To the extent that we consecrate, the Spirit sanctifies. Nor is NT holiness a merely negative or self-regarding sinlessness, an ascetic purity or abstention from known sin. It implies the constant activity and positive excreise of all goodness in the realm of daily life. As such, Christian holiness is necessarily a social grace, and it ripens many gifts and adjusts many idiosynerasies of character. So impossible is the perfeeting of holiness in isolation that the NT never contemplates a single 'saint,' but speaks constantly of 'the saints' or a 'holy people.' The root of Christian holiness is faith, and its flower is love; and the sphere for the cultivation of this holy love in Christ is His Body, the society of the Christian Church (1 Co 12<sup>12-27</sup>, Eph 1<sup>23</sup> 4<sup>10</sup>, Col 2<sup>19</sup>).

The final goal of the Christian life is complete

holiness, the deliverance of the soul from the guilt, power, and even presence, not of sin only but of sins also, through its perfecting in holy love (1 Jn 1° 2¹-8 3⁴-9). It is the teaching of John that this follows inevitably from the believer's dwelling in Him who is the negation of all sin and its destroyer, and who came not only to impute but also to impart righteousness, even as He is righteous. Where the Divine 'seed' of the Holy Spirit abides in the child of God, the kinship to Satan is necessarily annulled, and the Christian need not, must not, does not, and cannot sin, since it is impossible that Christ and sin should dwell together in the same breast. Whether John is here speaking of an actual attained experience (G. G. Findlay, Fellowship in the Life Eternal, London, 1909, pp. 114, 253–269), or is merely affirming the moral implications of an ideal faith (P. T. Forsyth, Christian Perfection<sup>2</sup>, London, 1910, pp. 1-49), is a matter of dispute. Strictly speaking, only the eternal Son was fully perfect. Even in regenerate Christians, allowance has still to be made for occasional lapsing into transgression through ignorance, surprise, or hostile circumstance (2). Such sin, however, does not reign, as it does in the unregenerate. It is not unto death, and can plead the Advocate with the Father. The Christian perfection taught in the NT is not faultlessness but blamelessness and loyalty, the staying of the heart in the obedience and love of God through faith, however the feet may be betrayed by the deceitfulness of sin into hidden snares. It is (a) relative to our creaturely experience and earthly limitations; (b) derived from God's grace in Christ, not based on any merits of our own; (c) progressive, or capable of indefinite improvement; (d) alienable or forfeitable, not guaranteed to perpetuity, but (e) conditional on faith, our striving against sin, and steadfast abiding in the love of God. It will also be characterized by humility, contrition, and self-disparagement. Such earthly or relative perfection, which consists in faith, is necessarily different from that full and final perfecting which crowns our faith, and which awaits the consummation of Christ's atoning work (Ro 8<sup>29.30</sup>, 2 Co 3<sup>18</sup>, Ph 1<sup>6</sup>, Col 1<sup>22.23</sup>, 1 Jn 3<sup>8</sup>).

We may now attempt to gather into a few propositions the teaching of the NT on this subject, without losing sight of the warning reminder of Lord Morley, that holiness is the 'deepest of all the words that defy definition' (Voltaire', London, 1878, p. 175).—(1) Holiness is the sovereignly moral or self-preserving element in perfect love—that element in it which, to secure the ends of righteousness, exerts a reaction of wrath or self-defence against all that would impair its purity and intensity. 'It is the holy that makes love divine, makes it racial, eternal, sure, changeless, and invincible' P. T. Forsyth, The Principle of Authority, London,

1912, p. 211).—(2) Christian holiness results from the imparting to man of God's own holiness, as it is mediated through Christ in a new creation. - (3) In one aspect, it is the fruit of sanctifying grace in us, the effect of the Holy Spirit working in our faith, to separate us from sin, perfect us in goodness, and enable us to do the will of God. -(4) In another aspect, it is the result of our own moral effort and aspiration of faith—an effort engaging the entire personality, body as well as soul, in the life of righteousness and love.—(5) Such holiness implies the existence of the Christian community, as the necessary soil and atmosphere in which it lives, and (6) it is a continuous and progressive spiritual discipline.—(7) Finally, while the NT dis-tinguishes holiness as something larger than morality,1 it yet knows of no divorce between holiness and virtue. 'Holiness is virtue rooted in the religious relation. . . . The distinction between holiness and virtue is qualitative, not quantitative' (W. R. Inge, Faith and its Psychology, London, 1909, p. 240).

II. HISTORICAL DEVELOPMENT.—The materials presented in the NT were very variously ntilized in the listory of the Chnreh. Now one aspect, and now another, of the full-orbed Christian doctrine was singled out and emphasized, and the eonception of holiness changed with every changing view of the nature of the evil to be shunned and the goal of ideal perfection to be attained.

I. Gnosticism introduced into the Christianity of the early Church a crude Oriental dualism and a fantastic Greek system of speculation, which tended to substitute a metaphysical or semi-physical cosmology of redemption, with an allegorizing of history, for the NT gospel of the Incarnation. Evil was identified with matter, and salvation consisted in the exaltation of the soul from unhallowed immersion in the material world of sense to its true spiritual home in the Divine pleroma, by means of ascetic purifications, mystical rites, and the illumination of a special gnosis granted to the pneumatic or truly spiritual Christian, and superior to the historic pistis which sufficed for the ordinary believer, or merely psychie Christian. Insight was elevated above faith. The result was a kind of esoteric holiness, more theosophic and speculative than ethical and spiritual.

z. On the other hand, Montanism, or prophetic holiness, was a protest against the rapid 'secularization' of the Church as it spread through the Roman Empire in the 2nd century. It sought, by a more ascetic discipline and the cultivation of the spirit of ecstatic 'prophecy' among the laity, to distinguish the congregation of the 'holy' not only from the world outside the Church, but also from the worldly elements within it, in view of the expeeted advent of the Lord in Phrygia. Montanism went beyond the NT conception of holiness in affirming a new dispensation of the Spirit. Paraclete has revealed greater things through Montanns than Christ revealed through the Gospel' (pseudo-Tertullian, 52). Yet it was a serious attempt to realize the ideal of the 'holy Church' by insisting that a pristine purity of communion must necessarily accompany established purity of doctrine. Montanism was the first of many efforts made within Christianity to restrict the membership of the Church to those actually holy or spirit-ually eleet. Negatively, it forced the Church

1 'No holy person is not good, but not every good person is feature of holiness would seem to lies beyond goodness, or at any rate lies beyond goodness, or at any rate here lies a touch of excess in holiness. It is not a matter of rule and policy... of more or less, but of nothing and all. Holiness needs fervour' (C. G. Monteflore, Truth in Religion, London, 1900, pp. 89, 95). 'For holiness is wanted a harmony of will, a perfect self-devotion, death to self and absolute submission' (Amiel's Journal, Eng. tr., London, 1892, p. 207).

2 Migne, PL ii. 91.

gradually to take up the position, especially after the Novatian and Donatist controversies of the 3rd and 4th centuries, that its holiness consists not nccessarily in the spiritual purity of all its members, but in the official and inalienable connexion of its orders with the Holy Spirit, the true doctrine it teaches, the eminent saints it can produce -in fact, in its possession of the means of all grace and holiness in the deposit of faith and in the sacraments. 'The Church . . . was legitimised by the possession of the apostolic tradition instead of by the realising of that tradition in heart and life' (A. Harnack, History of Dogma<sup>3</sup>, Eng. tr., London, 1894-99, ii. 83).

3. The recognition thus openly given to higher and lower planes of sanctity within the Church lcd, first of all, to a duality of practice, still under ordinary social conditions, reflected in a theory of the 'Two Lives' (cf. C. Bigg, Christian Platonists of Alexandria, Oxford, 1886, p. 83 ff.; E. Hatch, Influence of Greek Ideas, London, 1890, p. 164 ff.), and finally to Monasticism as a fresh type of ascetic holiness. Early monasticism may be regarded as a continuation of the aims of Montanistic 'Puritanism', without its anti-proclemination elements and ism,' without its anti-ecclesiastical elements, and welcomed by the Church itself. Despairing of making the majority even of its own members holy, the Church sought to counteract the prevailing laxity by approving, side by side with ordinary Christianity and in loose attachment even to the sacraanity and in loose attachment even to the sacraments, the pursuit of holiness by particularly religious persons, released from ordinary social obligations. Thus, whereas Jesus bade all His followers be 'perfect,' and the NT āγιοι and τέλειοι were sanctified or mature Christians in the ordinary walks of life; and whereas even Clement regarded the ideal 'Gnostic' as one who took his place in the deily round, 'acting the drame of life. place in the daily round, 'acting the drama of life which God has given him to play' (Strom. vii. 11), monasticism confined 'the religious' to a professional class, who should make the cultivation of holiness a distinct calling by fleeing from the world. Based thus on a religious egoism and an essentially dualistic view of the world, both of them alien to Christ's spirit, monasticism cultivated a negative or retired type of holiness. It attached a unique sanctity, not to inner renunciation or detachment from the world, with an exemplary practice of the ordinary Christian virtues, but to an external abnegation of all property and marriage, and to the practice of artificially selected virtues such as poverty, chastity, and ecclesiastical obedience. In monasticism, too, the holy man tended to identify himself with the sufferings and death of Christ rather than with His glorious riscn life and quickening Spirit. Holiness was to be attained and peace won by refinements of mortification, a severe penitence, and the rigours of self-disciplinary effort,

rather than by the free gift of God's sanctifying Spirit acting on the soul through faith.

'The Ascetic theory has always rested in the contest between the human spirit and the flesh: too often forgetting that the Divine Spirit is not merely the umpire and witness, but the Almighty Agent also in the destruction of sin' (W. B. Pope, Compendium of Christian Theology?, London, 1889, ili. 63).

There was no doubt going as well as less in the

There was, no doubt, gain as well as loss in the ideals of monasticism. It kept the light of religion burning in dark ages, and rebnked all dilettante forms of holiness by the example of a heroic and thoroughgoing renunciation. But its defect was that it made asceticism an end in itself rather than a means, withdrew the practice of holiness from its proper sphere in the ordinary life of the community, depressed and falsified the standard of holiness to be attained by the average man, and lett to itself the world which it should have leavened. The degree of individualism marking monasticism varied in different countries and at different epochs, often becoming, especially in the

West, social and co-operative within the narrow eirele of the monastery, as well as devoted to works of general utility. But still its holiness remained at heart a 'sublime individualism,' in marked contrast to the ideals of the NT.

4. A new conception emerged in Pelagianism, which may perhaps be described as a kind of natural holiness or Christian Stoicism. Pelagine claimed that, by means of the freedom of the will and the help afforded by God's grace in revelation, man is capable of perfect conformity to the will of God, who prescribes nothing impossible. In so far as man is not capable of conforming to the Divine ideal, he cannot be charged with sin for failing to do so, since there is no sin prior to the actual choice of evil by the free will.

Quaerendum est, utrumne debeat homo sine peccato esse. Procul dubio debet. Si debet, potest; sl non potest, ergo nec debet; et si non debet homo esse sine peccato, debet ergo cum peccato esse; et jam peccatum non erit, si illud debere constiterit. Aut si hoc etiam dici absurdum est, confiteri necesse est debere hominem sine peccato esse, et constat eum non aliud debere quam potest' (Pelag. apud Aug. de Perf. Just. 3).

This essentially rationalistic system of belief in the inherent capacity of man to achieve all the righteousness required of him appears in history in various forms, such as Socinianism and modern Naturalism. But it belittles the Divine demand, lays stress on sympathetic goodness rather than on the holiness that is mediated through faith, rejects both atonement and regeneration, and conflicts with the normal Christian consciousness of sin and grace. 'Grace is needed to make a man into a saint, and if any man doubt this he knows not what is a saint nor what is a man' (Pascal, Thoughts, Eng. tr.,

London, 1889, p. 296).
5. This truth was brought ont by Augustine, who made the keystone of his entire system the ntter dependence of the believer, for the beginning, middle, and end of Christian holiness, on the free, indispensable, supernatural, prevenient, and irresistible grace of God. Two other aspects of Christian holiness received prominence in Augustine: (a) its personal, emotional aspect, as a cleaving to the Lord God, the living individual relationship of faith, humility, and love, which appropriates the Divine Spirit and leads at last to life's blissful goal of perfect knowledge, vision, righteousness, iruition, and eternal rest; and (b) its social aspect, as a grace mediated to us only by means of and within the Christian Church, which is the civitas dei, the Kingdom of God on earth, and the sole sphere of salvation. Augustine may thus be said to have attached equal importance to the inward experience of grace and to its outward ecclesiastical attestation; but the emphasis which he laid on the moral effect of the infused love of God, as conditioning our holiness, rather than on the soul's new religious standing through forgiveness and regenerating faith, gave a direction to the Church's doctrine on this subject which was not to receive a corrective until the Reformation.

6. From Augustine sprang the mediæval conception of sacramental holiness, which was developed in systematic detail by the schoolmen, and reached its final form in the Catholicism of the Council of Trent. The characteristic features of this type are the objective provision for man's holiness in the supernatural grace of the sacraments, and the place assigned to merit in the process of sanctification. The one perfect treasury of all holiness and righteousness is Jesus Christ. We become members of His body, and share in the fruits of His Incarnation and Passion, when we receive the sanctifying grace of His Holy Spirit. This prevenient grace is a supernatural power or quality infused into the soul by means of the Divinely appointed sacraments or through prayer. It imparts the impulse towards righteousness and God, obliter.

ates sin both original and mortal,1 and produces, on the condition of our co-operating trust, that inner sanctification or disposition of assenting faith and justifying love which warrants the Divine forgiveness, inaugurates a state of snper-natural sonship or infused habit of holiness, and enables the soul to acquire those merits which are requisite for salvation.2

'By a justifying faith the [Catholic] Church understands qualitatively the theoretical faith in the truths of Revelation, and demands over and above this faith other acts of preparation for justification': namely, fear, hope, charity, penance, and almsgiving (The Catholic Encyclopædia, vi. [1909] 7011.; cf. Council of Trent, vl. 7, 9).

These good works, however, are themselves the fruit of co-operating grace, which incites and stirs into activity the latent goodness of man, and enables him, by a refined synergism, to fulfil the law of Christ, to receive justification, and to merit, ex condigno, or in strict justice, increase of grace, eternal glory, the fruitio dei, and participation in the Divine nature, which are the rewards of holiness. In Catholicism, justification is not simply a formal declaration of the forgiveness and remission of sins, with an external imputation of the holiness of Christ through faith; it is the actual result of the sacramental renewal of the inner man, by means of the acquisition of a new qualitas within the soul, as it is appropriated through incorporation in the Holy Catholic Church. As such, justification is necessity. sarily gradual and not instantaneous. It admits of increase and decrease or even loss, according to each man's co-operating disposition to receive it,5 the plain precepts of the gospel sufficing for ordinary Christians of the second order, while higher counsels of perfection remain additional and optional for such as 'in a better and quicker way' would attain to eternal life by totally abandoning the good things of this world. These not only attain to a religious level 'quae statum perfectionis profitetur,' but they may even so excel in holiness beyond what is strictly required of them ('bonum superexcedens' [Summa, II. i. qu. 109, art. 2]) as to accumulate a treasury of merit or works of supererogation, which are available for less mature Christians in the form of indulgences (q.v.), by a kind of transferred holiness, yet always on the basis of the mystic union of believers in the One Head. The absence of any assurance of salvation in this system 5 constrains the believer to supplement his faith by making diligent use of the Church's means of grace and by applying himself eagerly to salutary acts of virtue, in order to acquire, by many repeated efforts after obedience, that holiness which is necessary for future blessedness (see J. H. Newman, Parochial and Plain Sermons, London, 1844, i. 1-16).

7. Side by side with this sacramental type of holiness, and partly in protest against its spirit, there was fostered within the Church the picty of Mysticism, or immediate subjective holiness. Mysticism has assumed many forms in the history of the Church, but its characteristic ethical feature is the desire for inward purity as a neces-

sary condition of beholding and being united to God, through purgation, illumination, the rennnciation of all creatures, and the clevation of the soul above the distractions and multiplicities of the world of time and sense. In its extreme forms. mysticism tends to dispense with everything external and intermediary, and to wander into vague regions that are non-Christian, non-historical, and even pantheistic, thus making a fatal sacrifice of the Divine holiness. Christian mysticism frequently tends to depart from NT holiness by seeking to approach God otherwise than through the Incarnate Word, the means of grace, and the sole relationship of faith, as well as in its whole manner of laying emphasis on finitude rather than sinfulness, immanence rather than transcendence, communion rather than forgiveness, feeling and imagination rather than will and conscience, the bliss of personal absorption in the life of God rather than a life of filial obcdience to His will. Yet mysticism has ever served piety by insisting on inward experience and spiritual passion in religion; and in a St. Bernard it exhibited intense personal love of the suffering and lowly Jesus, the Bridegroom of the soul, as an all-important element in Christian holiness.

8. In the Mendicant Orders we find a still further reaction against the clerical ideal of sanctity, in the emphasis laid upon lay holiness. St. Francis and the friars brought back holiness from monasteries, churches, and the technicalities of hierarchical religion to the homes and haunts of ordinary men and the service of one's neighbour, by the preaching of penitence, humility, love, and a joyous imitation of the poverty of Jesus.

9. The chief corrective, however, to the sacramental conception of holiness was to come not from mysticism within the mediæval Church, but from Protestantism outside it. The Reformers contended for a fiduciary holiness, based on the religious experience of faith.

'Augustine and Catholicism attached great weight to sin; but behind sin stood concupiscentia, virtually a physical conception; and behind righteousness the hyper-physical infusio dilectionis, etc. Hence Catholicism culminates in ascetic morality and mysticism. For Luther there stands behind sin in the ethical sense sin in the religious sense, i.e. unbelief, and behind the being righteous the fundamental religious virtue, i.e. faith. . . . Luther attained that which Augustine, owing to his Neo-Piatonism, was not fortunate enough to reach, notwithstanding numerous approaches to it; he made Christlanity again a religion' (F. Loois, Leitfaden\*, Halle, 1906, p. 7371.).

(a) To the mystical doctrine of holiness through spiritual absorption in God in a love that replaces faith, Luther opposed the evangelical doctrine—itself essentially mystical—of the soul's present justification and holiness through the forgiveness of sins and a personal acceptance with the Father, for Christ's sake, by means of a sincercly penitent and trustful faith which neither need be nor can ever be ontgrown. To the semi-Pelagian Catholic doctrine of holiness, with its mysterious stream of forces in the sacraments, its infused and almost quantitative grace, its merely assenting faith, its elaborate penitential apparatus for the removal of sin, its toil and uncertainty, its emphasis on cooperating merit as imparting to the believer an objective and inherent righteousness before Godto all this Luther opposed the more religious conception of a joyous present certainty of individual salvation as a result of the direct personal relation-ship of childlike faith in the Father who has opened His loving heart to us in Christ Jesus, and won our unswerving trust by the free forgiveness of our sins. In such a system, sanctification, so far from being a stage in the process of justification, issnes from justification as its necessary obverse; for there is no other or further holiness possible

<sup>1</sup> For the Friends of God, Waldenses, and other holiness sects of the Middle Ages, sec separate articles.

feature is the desire for inward purity as a neces

to the Christian than that of faith, which is simply the continual daily appropriation, not of forgiveness only, but of God Himself in Christ, as the source of the believer's peace, power, righteousness, and good works. In the teaching of Luther, Christ Himself assumed the central place which in Scholasticism was occupied by infused grace; and the holiness of monasticism, with its ascetic morality and withdrawal from the world, was rejected to make way for a holiness of faith which could no-where be better exemplified than in one's ordinary

where we better exemplified than in one's ordinary calling as ordained by God.

'Perfectio Christiana est serio timere Deum, et rursus concipere magnam fidem, et confidere propter Christum, quod habeamus Deum placatum, petere a Deo, et certo expectare auxilium in omnibus rebus gerendis, juxta vocationem; interim foris diligenter facere bona opera, et servire vocationi. In his rebus est vera perfectio et verus cultus Dei' (Augsburg Confession, 1530, il. 27).

(h) The tracking of Granden and Confession, 1500 per perfections of Granden and Confession, 1500 per perfections of Granden and Confession, 1500 per perfections of Granden and Confession, 1500 per perfection and Confession and

(b) The teaching of Calvin on this subject was governed by his doctrine of Divine predestination, electing grace, and the sovereign will of God. His His aim was to cultivate an intensive holiness which should consist not simply, as Luther so breezily taught, in that free and loving service of all men which results from the joyous experience of the Divine forgiveness, but rather in reverent obedience to God's commandments and the observance of 'such legitimate worship as is prescribed by the law' of God (Inst. I. ii. 3). True holiness is possible only to such as are elect by the decree of God (III. xxii. 2), and it follows by a Divine inner necessity from justification, yet only within the sphere of the Christian Church, because of its possession of the Word and sacraments (IV. i. 4, 16). Not that all the members of the Church are equally holy,

holy,

only that with their whole heart they aspire after holiness and
perfect purity; and hence, that purity which they have not
yet fully attained is, hy the kindness of God, attributed to
them.' 'The Church is sanctified by Christ, but here the commencement only of her sanctification is seen: the end and
entire completion will he effected when Christ, the Holy of
holy ones, shall truly and completely fill her with His own
holiness' (IV. 1. 17, viil. 12).

Hence the importance attached by Calvin to a

Hence the importance attached by Calvin to a strict ecclesiastical discipline as a means to holi-

ness (IV. xii.).

ness (IV. XII.).

'According to Luther the primary purpose of the Church was to proclaim the Gospel of God's forgiving love in Obrist; according to Calvin it was to train the elect in holiness... The notion of the Church as a communion of holy people, pure both in doctrine and in conduct, because wholly governed by the will of God, increasingly overshadowed the idea of it as an agency for the proclamation of God's torgiving love' (A. O. McGiffert, in Essays in Modern Theology and Related Subjects, New York, 1911, p. 2181.).

These characteristics profoundly influenced modern Europe and gave birth to the austere holiness of Scottish Presbyterianism and English Pnritanism, with their occasional excesses of harsh casuistry, Sabbatarian gloom, and iconoclastic zeal, but with compensating glorics of spiritual grandeur and imaginative power. These types aimed at recovering the full *ethical* content of holiness, as well as the dnc emphasis on the holiness of God, and, by a new asceticism, they were all the more mighty in outwardly dominating the world because they had inwardly and spiritually renounced it (see E. Trocltsch, *Protestantism and Progress*, Eng. tr., London, 1912, pp. 79-85, 136-141).

10. The ferment caused by the Reformation gave rise to prove a termination gave

rise to several attempts, mostly non-ecclesiastical, to establish a more experimental holiness, the various forms of which may be studied in the Anabaptists, Scekers, Quakers, and other sects, in Pascal and the Port Royalists, and in Molinos, Féncion, Madame Guyon, and the Quietists. In Germany in the 18th cent. the movement took the form of Pictism, a reaction against the stiff scholastic dogunatism of the Lutheran Church and current rationalism. Spencr, Francke, and Gottfried Arnold were the leaders of a school which sought to transfer

the emphasis in religion from belief in an orthodox creed, and reliance upon institutions and means of grace, to the more emotional and personal appropriation of saving truth and the exemplification of it in holy coudnet. The experience of conversion and regeneration was insisted on as an indispensable preliminary to the true knowledge of God or the fruitful study of theology. 'Awakened' Christians were encouraged to meet together for free prayer, and an attitude of aloofness or antagon. ism was taken up towards worldly amnsements and secular culture. The movement gave rise to both philanthropic and fanatical developments, and in passing over into Moravianism it revealed strong separatist as well as missionary tendencies.

II. Moravianism in its turn did much to inspire Methodism, with its characteristic doctrine of perfect holiness. Already in his undergraduate days at Oxford, John Wesley had been known as the founder and leader of the 'Holy Club.' When he was about twenty-two, the reading of Thomas a Kempis led him to see that

true religion was seated in the heart, and that God's law extended to all our thoughts as well as words and actions... I set apart an hour or two a day for religious retirement. I communicated every week. I watched against all sin, whether in word or deed. I began to aim at, and pray for, Inward holiness' (The Journal of John Wesley, ed. N. Curnock, London, 1809, i. 466 (.).

These and subsequent experiences, rather than any abstract theorizing on the subject, led Wesley to become the life-long champion of doctrines which he afterwards unfolded in 'A Plain Account of Christian Perfection, as believed and taught by the Rev. Mr. John Wesley, from the year 1725 to the year 1777' (Works's, London, 1830, xi. 366-446). Wesley 'believed and preached that the Divino Spirit was as might in administering reduction. Spirit was as mighty in administering redemption as the Divine Son in accomplishing it' (A New History of Methodism, ed. W. J. Townsend, etc., London, 1909, i. 214). In opposition to the Catholic doctrine of meritorious perfection, the mystical conception of perfection through isolated communion with and absorption in deity, and the general view of perfection as something to be attained only in a future life, Wesley maintained the doctrine of a present evangelical or Christian perfection in the entire sanctification of perfect love. Such perfection is not to be confused with absolute or angelic or 'Adamic' righteousness, and is consistent with a thousand defects arising from our ignorance, infirmity, and creaturely limitations, being relative to the helps and opportunities of every moment. 'It is the perfection of which man is capable while dwelling in a corruptible body; it is loving the Lord his God with all his heart and with all his soul and with all his mind.' The sin from which it is free is 'the voluntary transgression of any known law,' and it implies constant self-rennneiation and even fasting, the careful observance of Divine ordinances, a humble, steadfast reliance on God's forgiving grace in the Atonement, a pure intention to regard God's glory in all things, and an increasing exercise of the love which itself fulfils the whole law and is the end of the command-

"The perfection which I have taught these forty years cannot be a delusion, unless the Bible be a delusion too; I mean, loving God with all our heart, and our neighbour as ourselves. I pin down all its opposers to this definition of it. No evasion 1 No shifting the question 1 Where is the delusion of this? (Journal, 27th Aug. 1763).

This doctrine of full sanctification was 'the grand depositum which God has lodged with the people

called Methodists; and for the sake of propagating 1 Wesley's doctrine of perfection may be studied further in the Journal, 24th July 1762, 14th May 1765, 27th Aug. 1764, 26th June 1769; Sermons, nos. xiiii., lxxvl., cxx.; and the Letters dated 5th Apr. 1763, 7th July 1761, 12th Sept. 1762, 12th May 1763, 21st Feb 1771. See also Minutes of Conversations, June 1744 and Aug. 1745, and the Methodist Hymn Book, section "For Believers Seeking Full Redemption." this chiefly, He seems to have raised them np. Wesley even doubted whether any who preached against it could continue in the Society (Letters,

15th Sept., 26th Nov. 1790).

12. The influence of these doctrines has been farreaching. In the various branches of Methodism to day the emphasis is everywhere laid . . . on the calling to the life of entire sanctification which is brought about by the reign of perfect love in the heart' (A New History of Methodism, ii. 421). This is especially prominent in the most recent offshoot of Methodism, the Salvation Army. 'Even among our worst enemies it has been admitted that the strength of the Salvation Army lay in its Holiness teaching' (Holiness Readings... reprinted from the War Cry, London, 1883, p. v; see also S.A. Orders and Regulations for Field

Officers, London, 1886).

13. The rise of modern Holiness Movements in Europe and America, where the work of Pres. C. G. Finney of Oberlin helped to prepare the soil, may be traced largely to the revival of religion through the work of Moody and Sankey in 1875. But it had already begun several years before, first in America and then in England, its pioneer with both word and pen being W. E. Boardman, who together with R. Pearsall Smith held a long series of special meetings for ministers and others in 1873 and 1874. A striking issue of these was a conference held at Broadlands Park, Romsey, in 1874, on the invitation of Lord Mount-Temple, for the purpose of considering 'the Scriptural possibilities of faith in the life of the Christian in possibilities of faith in the life of the Christian in the daily walk (a) as to maintained communion with God; and (b) as to victory over all known sin' (C. F. Harford, The Keswick Convention, London, 1907, p. 26). In the same year a larger conference, under the leadership of Smith and Roadman met at Oxford (for the promotion of conference, under the leadership of Smith and Boardman, met at Oxford 'for the promotion of Scriptural holiness'; and in 1875, by invitation of Canon Harford-Battersby, the first 'Convention for the Promotion of Practical Holiness' was held at Keswick. Among the chief leaders of the convention have been included Théodore Monod, Andrew Murray, A. T. Pierson, F. B. Meyer, and H. C. G. Moule. 'The Keswick Convention has set up no new school of theology, it has instituted no up no new school of theology, it has instituted no new sect, it has not even formed a society, but exists for the sole purpose of helping men to be holy (Harford, op. cit. 4).

In 1875, Smith visited Berlin and inaugurated what come to be known as the reader.

what came to be known as the modern German Gemeinschaftsbewegung. His work was earnestly taken up by Schlümbach, Christlieb, Paul, and others, and led to the formation of the Deutscher Evangelizationsverein (1884), the Gnadauer Pfingst-konferenz (1888), the Blankenburger Allianz-konferenz (1905), and similar associations. In some cases these broke away from the Established Church, but for the most part their aim was to cultivate a deeper holiness by means of special organizations in touch with it. The best theological exponents of this school were Jellinghans and Lepsius, whose views, however, have been regarded as unduly moderate by the more advanced sec-tions. In German Switzerland, O. Stockmayer is its chief representative. In America, apart from more special organizations like A. B. Simpson's 'Christian Alliance,' the Northfield Convention, established near Moody's own home in Massagestablished near Moody's own home in Massagestablis chusetts in 1880, has proved most influential. Ont of it has sprung the Student Christian Movement,

and other similar associations for the deepening of the spiritual life.

Modern Holiness Movements have advocated the privilege and possibility of our attaining, here and now, to the peace, power, and purity of full sanctification, through the surrender in faith.

Keswick sets before men's life of faith and victory, of peace and rest as the rightful heritage of the child of God, into which he may step not by the laborious ascent of some "Scala Sancta," not by long prayers and laborious effort, but by a deliberate and decisive act of faith' (Harford, op. cit. 51.). 'In the blood and death of Jesus there is to be had not only forgiveness but also a direct and immediate breaking of the power of sin, cleansing from sin, and continual victory over sin, in the surrender of faith' (Th. Jellingbaus, Das völlige gegenvärtigs Heil durch Christum<sup>5</sup>, Basel, 1903, pp. 20, 440).

In more normal statement a 'higher life' or

In more popular statement, a 'higher life' or 'second blessing' of 'full salvation' may be experienced through a single act of perfect consecration to God, who in response completely nentralizes or eradicates the sinful nature so as to grant a present deliverance from the power of sin, on the sole condition of 'abiding' in an attitude of dependent life-union with the exalted Christ. The degree to which this last condition, which involves exercise of the personal will of the believer, is explicitly dwelt on accounts largely for the different types of Holiness teaching. How far some forms of it can go may be judged by the affirmation of pastor Paul, 'I have for a long time now seen nothing of my old nature' (Gnadau Conference Report, 1904, p. 298). Such a claim to perfect holiness, however, is to be interpreted in a religious rather than in a moral sense. It admits of moral rather than in a moral sense. It admits of moral progress through growing 'light' in the conscience—and this the more rapidly because a new and normal attitude of obcdience to God's will as known has been consciously and once for all accepted by faith. 'In reality we are not yet fully holy' (H. Benser, Das moderne Gemeinschaftschristentum,

Tübingen, 1910, p. 36).

Generally speaking, the modern Holiness Movement seeks to conserve a neglected truth, and in an age of materialism and busy externalism in religion it has incalculably deepened the spiritual life of the Church. Yet its actual forms, apart from the extravagances of human frailty and error, have frequently suffered from narrowness of theological outlook and a lack of both psychological and ethical insight into the deep implications of the gospel. It is plainly unscriptural to suggest that any 'second blessing' can confer on certain Christians a higher kind of sanctification than the believes that they executed like from instifution faith. holiness that flows essentially from justifying faith, or bestow a new grace of spiritual infilling and deliverance from sin 'distinct from and additional to' the gift of the Holy Ghost granted in conversion and regeneration. 'It is a fatal mistake to think of holiness as a possession which we have distinct from our faith and conferred upon it. That is a Catholic idea, still saturating Protestant pietism' (P. T. Forsyth, Christian Perfection', 1910, p. 7). Further weaknesses may be seen in the tendency to identify heliness with sujetists self-absorption. to identify holiness with quietistic self-abnegation, even to the loss of personality, and with the 'rest of faith,' dissevered from inspired moral effort; to frown on all 'secular' culture and brand as essentially sinful habits and pursnits which are in themselves indifferent; to overstimulate feeling and to confine the grace of God to stereotyped forms of conversion; and to claim with overweening confidence the special sealing of the Holy Spirit and direct inspiration in the details of thought and action. In these respects the modern Holiness Movement is not an advance upon but rather a retrogression from Reformation standards (see P. Gennrich, Die Lehre von der Wiedergeburt, Leipzig, 1907, pp. 204-215; and C. R. Erdman, 'Modern Spiritual Movements,' in Biblical and Theological

<sup>1</sup> Boardman's Higher Christian Life, written before 1800, ran through many editions on both sides of the Atlantic, and quietly prepared many minds for the movement when it began to take more overt form in 1870 in Union Holiness Conventions under his leadership. It is still perhaps the most valuable introduction to the study of the modern Holiness Movement. See his Life (London, 1886).

Studies, by members of the Faculty of Princeton Seminary, New York, 1912, pp. 359-392).

There is noticeable at the present day a certain avoidance and dislike of the special advocacy of holiness even within the Christian Church. This holiness, even within the Christian Church. may be due to (a) the trend of modern thought, so far as it seems to have weakened the transcendental claims of theology, and consequently of Christian ethics; (b) absorption in social and economic problems, from which Holiness Movements have too frequently and ostentatiously withdrawn themselves; (c) a reaction against the unscientific and narrowly pietistic interpretation of the Bible; (d) a mistaken identification of holiness with asceticism, morbid introspection, other-worldliness, or professional religion. Hence we have such statements as the following:

'The idea of a holy working man is even grotesque. The virtues which the working classes at their best have recognized have been rather those of integrity, generosity, sincerity, good comradeship, than those of meekness, purity, piety, self-abnegation, and the like' (E. Belfort Bax, The Ethics of Socialism, London, 1889, p. 17).

The remedy would seem to lie in a recovered sense of the personality, transcendence, and holy character of God as the ground of all Christian holiness; in a fuller recognition of the social obligations of a holy life; and in a return to the harmonious NT ideal of holiness, with all its comprehensive religious and ethical implications.

I do feel that holiness consists in hearing Christ and following Him step by step in the minutest part of the minutest duty, and in acknowledging an ordinance of Christ in all the natural and social relations' (T. Erskine of Linlathen, Letters, London, 1878, p. 152).

social relations' (T. Erskine of Linlathen, Letters, London, 1878, p. 152).

R. H. COATS HOLINESS (Roman).—A definition of 'holi. ness' in relation to the Roman spirit is not easy to frame. Perhaps 'purity under divine sanction' may be taken as a rough explanation for the present purpose. In the carliest religion of the Roman State, ceremonial obligations were minute and exacting, and their relation to conduct is obscnre, but the idea that character was in some way dependent on a power unseen and snpcrhuman was not entirely wanting. The conception that moral perfection is pleasing to heaven is embodied in some of the oldest forms of cult—that, for instance, which the Vestal Virgins served. On not a few critical occasions the anger of the gods, bursting upon the community, was traced to their displeasure against an erring Vestal. As time went on, moral abstractions, treated as divinities, were publicly revered—chastity, for instance (Pudicitia); and these forms go back to an age when in religious matters Rome had as yet not been very deeply affected by Greece. Indeed, reverence for such abstract powers was always more characteristic of Italy and the West than of Greece and the East. We must ask and, if possible, answer the difficult question, What effect upon the individual life had the belief that morality is under the protection of Heaven? If we regard only the utterances of the Latin satirists who paint the manners of a small clique in the capital as though they were representative of the whole world, or the equally indiscriminate de-nunciations of Paganism by early Christian writers, we may be tempted to answer 'None.' But a great amount of evidence exists which tells a different tale.

Thus, the vast mass of private memorials un-earthed in the Western world by excavation bears testimony to a family life far different from that which is almost exclusively presented in the literature of the Empire. The fact that Vesta was the presiding deity of the family circle, as well as of the State conceived as a larger family, is a sign of a general belief that the ultimate sanction of morality is found in a supernal world, and that moral cleanliness among those of this world is a precept which issues from the other. This idea finds general expression in language, particularly in the nse of the words castus, purus, sanctus, pius. Of course, these terms sonictimes have a hard and somewhat lowly significance. They may be employed in a limited sense, not in reference to character taken as a whole, but to abstinence from some particular class of immediately acts. It is from some particular class of immoral acts. It is not easy to trace the moral life of a people or an empire. But it is not too bold to say that the history of these words in the Latin language shows a steady elevation of the ideal of morality.

The conviction that, in spite of the many horrible misrepresentations which a long line of pagan poets and philosophers denounced, the gods favour personal purity is exhibited in much favour personal purity is exhibited in much Roman ritual besides that connected with Vesta. Priests and priestesses were often subject to severe restrictions. Boys and girls, being innocent, were employed in divine service, as we see in the Carmen Sæculare of Horace. This famous hymn may be said to have done homage to the efforts of Augustus, who strove to cure the sickness of the world by the union of moral and religious reform. His policy made an epoch in the social history of the Western Empire. The great Greek tide which had swept the educated classes into scepticism began to turn, and a belief in the divine government of the world was renewed and penetrated society. An increased yearning after moral purity manifested itself in many ways. New forms of religion and new applications of philosophy alike show the influence, although then, as after, religion and philosophy were not always on the side of morality. There were Stoic and Cynic antinomians as there have been Christian. And the new divinities, Isis and Mithra and others, who were so ardently accepted, could debase their worshippers. But, on the whole, these new cults were popular, at least in part, because they satisfied to some extent the desire to find a way of escape from the corruption of unregenerate human nature—a way not opened by the older civic faiths. The seeds of Christianity could hardly have thriven as they did in the field of the Roman world if it had been still, morally, the world of the ancient Cato.

Not nunaturally we find purity as a cult more prevalent among women than among men. On the principle of 'corruptio optimi pessima,' satirists specially loved to depict the degradation of But an attentive reader, say, of Mayor's notes on Juvenal, will see something of the other side of the shield. And a perusal of the very numerous gravestones of women will leave an impression that there was, even at the worst time of the Empire, a wide range of sound family life, resting on the purity of the matron and mother. The commendations of the nntainted lives of mothers of households are, in a multitude of cases, far from being hypocritical or merely conventional. The celebrated eulogy by a consul, Lucretius, on his wife Turia, in the Augustan age, praises her for chastity and religiousness without superstition. It was just this hope of stainlessness, combined with worship cleansed from superstition, that drew women, and in a less degree men, not only to Christianity, but to the cosmopolitan pagan divinities. A common type of inscription praises a wife for her 'old-time sanctity and modesty.' In spite of loose views of the marriage tie, we hear much of marriages which endured through long lifetimes, and the title univira, 'wife of one husband,' was prized. This turning away from the superstitious exaggerations of the ancient cults, combined with a recoil from impurity, is well seen in that strange apology for Christians rather than for Christianity, the Octavius of Minneius Felix, written in the

latter half of the 2nd cent. A.D.

Until the rise of the Neo-Platonic philosophy, which was not a great force until the last Imperial centuries, the tendency of the later philosophers, both in the East and in the West, was to eschew theory and enforce morality. This was characteristic of all the schools alike, by whatever name they were called. It is impossible to mistake the trend in educated circles in the West during the first three centuries of the Empire towards an elevation of morality, whose moving force was a higher view of the relation of the individual to God. There is an ever strengthening vein of puritanism in the later philosophy, which reached its full development in the Neo-Platonic scheme. This vein is especially traceable in Stoicism. The dry logic of earlier Stoicism was softened, so that the moral lessons of the school might reach a large circle of Roman disciples. Every attempt was made to bridge over the gulf between the philosopher and the vulgar. The philosophic missionaries, who wandered about the world preaching to the multitude, though accused, like other teachers, of criminality, found a bearing from the crowd just because of the vague yearning after a better life. There was a gradual approximation to the Christian idea of sin, and the necessity was realized of a divine deliverance from the burden of the flesh,

with its impulse to immorality. Virtue was explained as attainable only by the will of God, and by imitation of the divine; duty, as the outcome of the divine law. 'No man is good without God,' said Seneca. The philosophic teacher was more and more presented as the enrer of sick souls. The wide difference between doctrine and practice among the followers of this teaching was the theme of satirists, but there is much reason to donbt whether they were more open to this kind of reproach than the adherents of other religious and moral systems in the past and in the present.

LITERATURE.—Information on the subject is scattered about in works on Roman religion and Philosophy and Social Life. Especially may be mentioned: G. Wissowa, Religion und Kultus der Römer 2 (in Müller's Handbuch der klassischen Alter tumswissenschaft), Münich, 1912; L. Friedländer, Darstellungen aus der Sittengeschichte Roms in der Zeit von August bis zum Ausgang der Antonines, Leipzig, 1831; E. Zeller, Philosophie der Griechen 5, do. 1898, iii. J. S. REID.

HOLINESS (Semitic).—The conception of holiness when traced to its historic origins among Semitic peoples is stripped of all the ethical qualities with which onr Christian modern consciousness has invested it. The ethical elements which have become absorbed into its content entered at a much later stage in the evolution of ideas which became attached to the term. This change of connotation

attached to the term. This change of connotation will be duly noted in its proper place.

I. HOLINESS AT THE BARLIER STAGE.—I. The original meaning of the Semitic word for 'holy,' holiness,' k-d-s (s).—The use of the Assyr. Pael kuddusu, 'to purify,' and of the corresponding adjective kuddusu in the sense of 'pure,' bright' (to which the syllabaries give us the synonyms ellum and ebbu, 'clear' or 'bright'), might tempt ns to assume that the original connotation of the term was 'brightness,' especially when the Arab. kadasa and its derivatives might seem to lend some support to this view. But it would be precarious to build npon the infrequent use in Assyrian of derived forms, and in Arabic of what may be a derived meaning. Our only safe course is to generalize from the use of k-d-s both as verb and as substantive in the earliest documentary sources, and of other words, such as h-r-m, found in all the Semitic languages possessing a similar meaning. We are thereby led to the conclusion that the term k-d-s expresses the separation or reservation of a thing or a person for Divine use or a Divine cult, and the state of an object or person so reserved and brought into close relation with Deity as inaccessible or hardly accessible, and invested with a quasi-Divine character and power.

We are here touching upon the common ground of primitive custom where Semitic and non-Semitic traditions blend. The saying of Statins, quoted with approval by E. Renan (Hist. d'Israël, Paris, 1887-94, i. 29), 'Primus in orbe deos feeit timor,' here finds its application. The element of fear, which invests the relations of primitive man (see the 'General' art. above) with the occult personal or quasi-personal agencies with which he appeared to be surrounded, is expressed in the Heb. phrase for religion, man, man, this feeling of awe was extended to all objects which stood in more immediate contact with the gods whom the Semite worshipped.1

worshipped.\*

1 Robertson Smith is dominated by his conception of sacrifice as expressing communion between God and the worshipper. Therefore, when he says (Rel. Sem.<sup>2</sup> 541.), 'It is not with a vague fear of unknown powers, but with a loving reverence for known gods who are knit to their worshippers by strong bonds of kinship, that religion in the only true sense of the word begins,' he is expressing only a partial truth. S. I. Curtiss, who travelled among the inhabitants of the Hinterland of Syria and Palestine, is probably right in asserting that the worship of the modern primitive Semite is simply the product of fear. The answer of his Arab guide Hamdan to the question what made the Arabs religious might almost as well be given by the primitive

Analogies to the primitive conceptions of holy things may be found in Hebrew religion. The mountain Sinai, Jahweh's abode, was holy and eould not be touched without peril to life (Ex 19<sup>12, 12, 21-24</sup>). Similarly Uzzali's temerity in touching the ark of God (2 S 6<sup>66</sup>.) led to his death. We have an instructive example of the survival of such magical conceptions regarding holy objects in the ceremony of trial by ordeal of a woman suspected of adultery (Nn 5<sup>11-25</sup> [P]).

The passage is difficult because it shows, if Baentsch's analysis be correct, that the text has been worked over at different times. After various ceremonics we read in v.172. 'And the priest shall take holy 1 water in an earthenware vessel; and of the dust which is on the floor of the tahernacie shall the priest take and put it into the water.' After further ritual, as unloosing the woman's hair, 2 the officiating priest takes in his hand the 'haleful water that brings a curse' and makes the woman swear a solemn oath (vv.19.22). After reciting the words at its close, 'And this water that brings a curse shall enter thy bowels to cause thy womh to swell and thy thigh to fall,' to which the woman replies, 'Amen, Amen, 'the priest writes the words of the curse in a book and immediately dissolves the writing's completely in the haleful curse-bringing water, and, after waving a meal offering before Jahweh and burning it, he causes the suspected woman to drink the 'holy' baleful water.

Robertson Smith holds that the vector is here The passage is difficult because it shows, if Baentsch's analysis

Robertson Smith holds that the water is here called 'holy' because it is derived from some sacred spring. 'En-Mishpāt at Kadesh, as well as 'Ēn-Meribhah, he would explain as sacred springs whose waters were used in decisions based upon ordeals of this kind. On the other hand, Baudissin, with at least equal probability, explains the 'holiness' of the water as due to the fact that it was kept in a vessel belonging to the sanctuary (Ex 3016). The example we have cited is instructive as showing that kodesh includes a positive elewell as a negative element, viz. the positive element, with the positive element. ment of Divine power which may break forth with destructive effect. Baudissin's statement, that does not properly designate a quality but a relation as God's property, is scarcely adequate (Studien zur sem. Religionsgesch. ii. 45). Moreover, this writer's view, that the materialization of holiness in Ezekiel is late (ib. 141), is certainly contrary to fact.

Further illustrative examples will make this elearcr. In Is 656 we have primitive conceptions of holiness in respect of persons as a mysterious potency which can pass from one individual to another with whom he comes in contact. The latter is therefore warned: 'Stand apart, for I make thee holy.' This expression occurs in a passage crowded with obscure references to the cults of Palestine into which the resident Hebrew population in the middle of the 5th cent. had

Semite: 'Every misfortune comes from God. Nothing comes except from Him. We fear God and the Welis. We take our vows In order to guard against injury. God receives our vow like a baksheesh. When all goes well, I offer a fedu that no misfortune may overtake us' (Ursem. Rel. im Volksleben des heut. Orients, Lelpzig, 1903, pp. 293, 64 f.).

1 Some doubt exists as to the validity of the reading of our least North Lelpzig.

text D'T'D D'D, for the LXX have τδωρ καθαρόν ζωον. This has induced Dillmann, Nowack, and others to substitute for the somewhat unusual n'erp the words n''n n''n only. On the other hand, Rohertson Smith (Rel. Sem.2, 181) contends for the validity of the reading 'holy water' as an 'isolated survival of an obsolete expression' in post-Exilic Judaism derived from the old language of Hehrew ritual. In this case 'pure water' and 'living water' would be the later interpretative glosses which came to be substituted in the texts employed by the Greek translator.

2 See ICC, ad loc. Cf. on unloosing the hair, Wellhausen, Reste? 199.

3 Gray (ICC, 'Numbers,' ib.) cites the custom practised in Egypt of writing passages from the Qur'an on the inner surface of a bowl and using the water that had dissolved the writing for medicinal purposes.

4 Here reading, of course, the Pi'el instead of the impossible Ral of the Heb. text; so Geiger and other recent scholars. Another interpretation than that given above has been suggested to the present writer by Haddon, viz. that the initiated person is anxious not to lose his sacred potency by contact with another. Similarly in Mk 15" Jesus is well aware (Europeos) that a potency (Eirague) had passed ont of Him when touched by the diseased woman. somewhat unusual קדשים the words מיים or only.

lapsed. One who had passed through a ceremony of consecration warms another to keep at a distance, because contact with his own consecrated person might infect that other with holiness, and thereby surround him with a circle of tabus or restrictions which would disqualify him from discharging the ordinary duties of life. This becomes evident from a comparison with Ezk 44<sup>19</sup>. There special instructions are given to the Zadokite priesthood that, when they pass from the inner to the outer court of the sanctuary, they are to put off their official vestments wherewith they have ministered before Jahweh in the inner court (cf. v. 15%) and place them in special holy chambers, lest by their contact the people whom they meet are made holy. Other ordinary garments must be substituted by the priesthood in the onter court in order to prevent this contagion of holiness. The same principle of contagious holiness applies to the ntensils employed in sacred rites. Since special holiness was ascribed to the sin-offering, it could be eaten only in a holy place, i.e. the court of the tent of meeting (Lv 6<sup>18-23</sup>). Contact with the flesh of this most holy sacrifice creates holiness, and every garment on which the blood is sprinkled must be washed in a holy place. In other words, a circle of tabus of a stringent character is set up. the earthenware vessel in which the sacrificial flesh is boiled must be broken, and, if the vessel be bronze, it must be carefully scoured and rinsed. Holiness is treated in every respect as something material (vv. 21-23). We should also compare Lv material (vv.<sup>21-23</sup>). We should also compare Lv 11<sup>33-35</sup> 15<sup>12</sup>. These last passages deal with cases in which something nuclean has come into contact with an earthenware vessel. Thus, if a weasel, mouse, or other unclean animal (Lv 11<sup>295</sup>) fall into an earthenware vessel, or if that vessel be touched by a person who is unclean by reason of a discharge, it shall be broken. Here we see that there is a close analogy between uncleanness and holiness. The effect on the vessel is the same; it has to be broken whether it has contained sacrificial This close flesh or that of an unclean animal. point of contact has been investigated by writers on Semitic religion, e.g. Robertson Smith and Lagrange. The common factor in both impure and holy objects is that a certain element of danger, owing to the action of a superhuman agency, invests the object in both cases (Rel. Sem.<sup>2</sup> 153, 447-452), and serves to debar it from luman use and contact. For contact in both cases involves contagion, and in certain cases uncleanness. Thus in Heb. 533 the familiar root meaning 'approach' is used in Arabic in the sense 'be At the same time, the distinction between holy and unclean is a real one, though both are blended in various forms of tabu in savage enstom (see the 'General' art.).

Primitive life deals with concrete conceptions. Thus in primitive Semitic religion, holiness might be regarded as the nimbus or outflow of Dcity which attached itself to everything that mediates in worship, whether persons or things, between the god and his worshipper. So closely is holiness attached to the Divine personality that Jahweli swears by it (Am 4<sup>2</sup>) just as He does by His life (Nn 14<sup>21, 23</sup>, Dt 32<sup>40</sup>, Jer 46<sup>18</sup>; ef. 1 S 14<sup>22, 25</sup>, 2 S 2<sup>77</sup>, etc.), or just as the Divine name became associated with Himself and men swore by it (Ly 19<sup>12</sup>, 1 S 20<sup>12</sup>, Zec 5'; ef. Jer 44<sup>25</sup> etc.). Thus we find 'holy gods' in the inscription of Eshmun'azar (line 1)

(line 9).

The ideas of withdrawal, restriction, and reservation expressed in Heb. by  $k-d-\delta$ , applied to objects connected with worship, are in Arabic exhibited by other terms. Chief among them is the

1 See the reference to the Holy Scriptures 'defiling the hands,' at the close of the present article.

word haram, of which the root frequently appears word haram, of which the root frequency appears in Canaanite Hehrew, Aramaic, and occasionally in Assyrian. In this case etymology enables us more easily than in that of  $k-d-\delta(s)$  to arrive at a definite connotation. Its meaning is 'to seelude,' 'debar,' or 'render inaccessible.' What is sacred and also legally prohibited is called harām, and any object or woman who may not be approached is designated harām. Thus harām is anabstantive is specially used by a Muslim of the substantive, is specially used by a Muslim of the sacred enclosure of the Ka'ba at Mecca. With the Hebrew-Canaanite herem, or 'han,' which was specially connected with war, we shall deal later. The noun-form haram also meets us in Aramaic Nabatæan inscriptions. In these, haram means something inviolable. Thus in an inscription on a tomb in el-Hejra the deities Dūshara (properly 'owner of Shara'), Manuthu, and Kaishah are invoked to bring a curse on any one who shall dis-pose of the tomb in any way or alter the inscription, for the sepulchre and its inscription are an inviolable object' (haram). The same word is used to express what is sacred and inviolable in the inscription of Petra (CIS ii. 350), where the sepulchre and surrounding gardens and purlieus are called the consecrated and inviolable possession (אותם שרוי) of Düsharā, the god of our lord.'2 Here haram approximates the use of the same word in Arabic.

Another Arabic term of closely similar meaning is himā, designating something forbidden or reserved, or, more properly, guarded or protected from intrusion. Thus we read of the himā of Wajj attached to the sanctuary of Al-Lāt at Tāif, which was under tringent also like the Like which was under stringent rules like the Polynesian tabu. 'If a woodcutter intruded on the himā of Wajj, . . . he forfeited his hatchet and his clothes; if a man unlawfully grazed his cattle on the himā of Jorash, the cattle were forfeit' (Rel. Sem. 2 146). We find also that dress which was employed in ordinary life is distinct from dress worn in sacred functions. Accordingly, shoes or sandals soiled by travel were put off when the sacred enclosure, such as a mosque, was entered (cf. Ex 36, Jos 516). Clothes were either washed (in case of poor worshippers) or changed (Gn 353, Ex 1916). Even cattle which had strayed from outside into the himā could not be reclaimed.

The opposed term to kodesh in Heb. is hol, properly that which is free or set loose for ordinary human use, in other words, not subject to the restrictions involved in holiness. In Lv 10<sup>10</sup> the distinction is sharply drawn, and priests are exhorted to observe it as they would that between clean and unclean (cf. Ezk 22° 42° 44°). This stringency of distinction became specially emphasized in the days of the Exile (Is 521. 11), and still more in the days of Ezra, when laxity of usage required stern correction combined with strict rule. Without this the result would not improbably have been 'the final extinction of Israel' (Travers Herford, Pharisaism, London, 1912, p. 10).

But this was only to accentuate a tradition that

1 Respecting non in Aramaio inscriptions, both as verb and as substantive, see Lidzbarski, Nord.-sem. Epigraph., Berlin, 1898, p. 280. The verb simply means 'to be holy'; the Aphel is used for 'consecrate.'

2 See G. A. Cooke, North Semit. Insc., Oxford, 1903, nos. 79 (lines 5-8), 94 (line 3); cf. Lagrange, 183.

אבא, Heb. חסה (root of הסוח, 'wall'), meaning 'protect,' 'guard,' 'hinder.' Perhaps the fundamental meaning is 'to be

hot with anger' (in defence of rights); of. (Lidzbarski),

had its roots in the past. Theory and prescription, however, have to give way under the presence of practical necessities, and in the pre-Exilic period of Israel's life such cases must have frequently arisen. Originally the right of asylum (q.v.), even for stray or stolen cattle that passed within some himā, or sacred enclosure, was pretty strictly enforced in primitive nsage, as the story told by Wellhausen (Reste<sup>2</sup>, 52, taken from the narratives of Ibn al-Kalbi) respecting Saifi, the priest of the deity al-Fals, who had stolen a milch-camel and detained it under the deity's protection, clearly shows. But this right was modified by the Hebrews. Instice could overtake a murderer, even though he took refuge in a sacred enclosure. Such asylum availed only in the case of accidental manslaughter (Ex 2113th), and even in this case the asylum came to he limited to only a few selected spots (Dt 4<sup>41-43</sup> 19<sup>2-10</sup>, Jos 20<sup>2-9</sup>, Nn 35<sup>11-16</sup>). Probably, as Rohertson Smith suggests, the community of interest which subsisted between the people and its deity tended to mitigate rules which might otherwise have pressed with excessive severity on his worshippers. Thus the money stored in the sacred precincts of the temple of Ba'al-berith was even employed by Abimelech to hire a company of desperadoes (Jg 94). In the textually difficult passage 1 S 214-7 (see Driver and Budde, ad loc.), we read that in the lack of ordinary unconsecrated bread (ht on) the holy bread that stood on the table before the Divine presence (the on) in v. 5 = 0.000 is in v. 7) was distributed among David's starving followers by the priest. The fact that starving followers by the priest. The fact that the distinction between kodesh and kol is here expressed, and that the priest endeavours to exact conditions of purity, points to the conclusion that we have a departure from ancient and normal custom (cf. Mk 226).

The distinction between ködesh and köl above

indicated is obviously different from that be-tween Divine property and human property, for it is the distinction between objects in the use of which there are severe restrictions, and objects which are free for ordinary human use. This idea of sacredness, involving restriction of use and danger accruing from its violation, was far more primitive than the conception and usage of property, though it may he admitted that the latter

came afterwards to supervene.

It is not possible within the compass of this article to deal with all the ramifications into which the ancient conception of holiness extended among the Semites. It must suffice to classify their varied departments concisely under the following heads.

2. Holy things.—(a) Places which are invested with holiness are those in which the supernatural power and presence are supposed to be manifested. These elements of power and presence were often expressed in Semitic by the word name (see below under (k)). Hence a sanctnary was said in Hebrew parlance to be a spot (par excellence Jerusalem) in which God had 'put his name' (Ex 20<sup>24</sup>, Dt 12<sup>8</sup> 16<sup>8</sup>. IL 18 26<sup>2</sup>, 1 K 8<sup>20</sup>). Such a place would in Heb.-Canaanite be called ködesh and he invested with the qualities of holiness and its restrictions. In the primitive life of the Arabian desert, from which it is generally held that the Semitic peoples emerged, the main physical characteristics associated with holy spots would be fertility, the spring arising from the soil and creating a verdant oasis of shading trees in the bare desert. These manifestations of a full vitality were ascribed to the presence of a supernatural Power who took up His abode there; and some portion, or even the whole, would be regarded as His sanctnary, and invested with the restrictions of holiness. Canaan abounded in such holy places. But there were other causes hesides fertility which might invest a spot with special

<sup>4</sup> Root 15n, Arabic Latter, being applied to the discharge (lit. the untying) of a vow, is the same which is regularly used of emergence from a ctate of taboo (the thram . . .) into ordinary life? (Rel. Sem. 2, 482).

VOL. V1.—48

sanctity as manifesting a Divine power and presence. Thus the sacred stone Eben-ezer was erected by Samnel at the place where Jahweh manifested His power in the defeat of the Philistines (1 S 7<sup>12</sup>). In the spot where God appeared in a dream to Jacob, the stone marked the spot, and oil was poured npon it (Gn 28<sup>11-18</sup>), and the sanetnary was named Bêthēl.

Heaven is properly the abode of Jahweh, though He dwells with Israel in certain spots, especially Hence the 'holy monntain' of on monntains. Zion (Is 119, Ps 151 248, Wis 98). Bnt from earliest times Jahweh was regarded as the atmospherie deity, and thus in later literature heaven, being His place of abode, is designated holy (Ps 206, Wis 910), and even came to be used as a substitute

for the Divine name.

(b) As just indicated, any sacred spot separated off and surrounded by restrictions as to access and ordinary use (Ex 35) would be marked by a stone, which served for an altar, on which the blood of the offered animal was sprinkled or smeared, and at the same time also as a symbol for the Divine presence. There can be no doubt that the numen of the deity was thought somehow to reside in the stone.1 Hence the primitive objection to hewing the stone or in any way violating it by the appli-eation of a tool (Ex 20<sup>25</sup>). Moreover, the smearing of the blood, which in the primitive form of worship was shed over the upright stone (Heb. maṣ-ṣēbhah, Arab. noṣb), or over the heap of stones or eairn (such as the gal'ēdh of Gn 3146L),2 contains in itself a very clear indication that the sacred stone embodied the Divine presence, which was thereby made participator of the sacred meal or offering. Such a conception of sacrifice persisted into post-Exilic times and survives in its legislation (Lv 21s. 17; cf. Mal 17).

(c) The sacred spring was a frequent accompaniment of the sacred place. In fact, as Wellhausen remarks (Reste<sup>2</sup>, 104), wherever human beings settled down by a sanctuary there must of necessity be water. Moreover, the fertile spot marked by the stone symbol would naturally possess a flowing spring arising from the mysterious water-

depth (oing).

"Of all inanimate things, that which has the best marked supernatural associations among the Semites is flowing (or, as the Hebrew says, "living") water. In one of the oldest fragments of Hebrew poetry (Nu 2117) the fountain is addressed as a living heing '(Rel. Sem. 2135).

Such a manifestation of life around which verdure spread and which was endowed with properties of cleansing, and in many cases with medicinal or healing virtues, sometimes regarded by the Arabs as inhabited by serpent jinn, obviously possessed a sacred character (cf. 2 K  $5^{10.14}$ ). An interesting text of Anubanini, King of Lulubi, published by V. Scheil (Textes élamites sémitiques [=vol. ii. of J. de Morgan's Mémoires de la délégation en Perse, Paris, 1901 ft.], 1st ser., p. 67, cited by Lagrange, 160), shows how seas and streams were endowed with personality and invoked:

with personality and invoked:

'May the upper and lower sea of the abysedestroy his parents and his offspring.' Here the sea is invoked to work out a curse. In another case the waters of a river have the power to absolve or condemn: 'May the rivers Tigris and Euphrates, the canals Mekalkal, and the canals Si-kut and Arahtum, dear to Marduk, deliver and absolve thee.' That such streams were regarded as 'holy' is clear from the third tablet of the Surpu series published by Zimmern. To drink their water in an impure cup (col. 1. 21), or to spit-into or otherwise pollute the racred stream (col. ii. 59 f.), was a crime from which priestly absolution through Marduk was needed.

The pracence of the spered spring in many of the

The presence of the sacred spring in many of the holy places of ancient Israel is attested by such names as Be'er-Sheba', 'En-Mishpat, and the holy stream issuing from the sanctuary in Ezekiel's

1 So Robertson Smith and also Bandissin, in ZDMG Ivil. [1903] 820; Lagrange, 194; and HDB iii. 8799, footnote.

2 On the occasion of the covenant-sacrifice between Jacob and Labon, cf. Jos 247.

vision (471-12). Also somewhere in the Negebh we may pieture Hagar's Be'er-lahai-rôi (Gn 2114-19).

(d) Another accompaniment of the sacred place as the sacred tree. That trees were endowed was the sacred tree. with supernatural life may be illustrated by numerous examples of primitive belief. This supernatural life would be suggested by the vitality of the tree itself and its fruit-producing capacity, whereby mankind is supported, or by its medicinal leafage (as in the case of the trees that grow on the banks of the sacred stream flowing from the sanetuary in Ezekiel's vision [47<sup>12</sup>]). In primitive Arab. religion certain trees were believed to be demon-haunted (Wellhausen, Reste<sup>2</sup>, 105). The deity 'Uzzā was considered to dwell in one of three Samura trees at al-Nahla, and on the track between Meeca and Medina there were many Samura and other sacred trees. With the worship of the date palm at Najran (ib. 104) we may compare the palm-tree of Deborah (Jg 45). This subject is very extensive, and the reader may be referred to the treatment in Barton's Semitic Origins, 75-92. The special sanctity ascribed to the palm in Arabia is to be connected with its importance to man as furnishing sustenance both for himself and for his cattle. The traditional for himself and for his eattle. sanetity of trees passed into Islām, and Muhammad was held to have rested and prayed beneath the sacred trees between Meeca and Medina, just as Elijah rested and slept beneath the rothem (Arab. ratam) tree and there received an angel visitant (1 K 195). In Arabia and in Palestine visitant (1 K 195). In Arabia and in Palestine such trees become dhāt anwāt wherever festivals are eelebrated; and the boughs are laden with dedicatory offerings of clothes, weapons, or ostrich eggs. Among the ancient Hebrews, sacredness chiefly belonged to the terebinth. It frequently appears in the Abraham-narratives (Gn 13<sup>18</sup> 14<sup>15</sup> 18<sup>1</sup>). By a terebinth tree the angel of Jahweh appeared to Gideon (Jg 6"). We find several allusions to the Gideon (Jg 6"). We find several almsions of the fact that Divine communications were made in the we have close connexion with terebinths. Thus we have the terebinth of the soothsayer (axio) in Gn 120 (cf. Jg 937, Dt 1120); and in the syneretic worship of the high places incense was burned under its shade (Hos 413), as well as under oaks and poplars.1

(e) Out of the sacred tree arose the sacred symbol of the stem or pole standing near the altar, regarded as the symbol of the deity Ashërah, goddess of fertility and prosperity. The existence of this goddess was formerly doubted by Wellhausen, Robertson Smith, and others, who maintained that Ashērah designated only the sacred pole. But Assyriology has clearly demonstrated the existence of this goddess in the proper names Abd-Ašratum, Abd-Ašrati, and Abd-Ašriti (A. Jeremias. Das AT im Lichte des alten Orients? Jeremias, Das AT im Lichte des alten Orients<sup>2</sup>, Leipzig, 1906, p. 322, n. 1; KAT<sup>2</sup>, 432 f.). We might regard its rude representation in the pole fixed in the ground as a kind of roughly modelled ξόανον, or wooden image, of the goddess (Lagrange, 176), analogous to the massibhah (perhaps an approximate representation of the human figure).

(f) Holiness was naturally ascribed to the apparatus of worship, such as altar-bowls, cups, and other vessels of the sanctuary (Nu 3<sup>31</sup>, 1 K 8<sup>4</sup> '73 "75"). It was also applied to materials with which consecration of persons was affected or with which it was accompanied, e.g. oil, water, the diadem, and, in general, the garments won by the priest (Ex 281-4), as well as to the offerings presented by the people, which were hallowed (Ex 282, Lv 2214-15). Any act of ritual inadvertence was a sin of pro-

In ancient Egypt, on the other hand, the sycomore was regarded as sacred (see Maspero, Histoire, Paris, 1891-99, L 121, and Gressmann, Altoriental. Texte und Bilder, Tübingen, 1909, li. 47).

In Aramale we find the word &dahh, ear- or nose-ring, regarded as an amulet with sacred devices or names.

fanation, which had to be borne by the officiating An inevitable condition of the holiness of persons and things was that they must be pure or We shall afterwards observe purity and holiness taken up into the ethical realm (Ps 244). Here all that it is necessary to note is that, though not identical, they come into close connexion.

Just as a woman unclean through chlid-birth could not enter the sanctuary (Lv 124), so uncleanness in things was incom-patible with their presence or employment in worship. Ac-cording to the conceptions of the ancient Orient, demons and cording to the conceptions of the ancient Orient, demons and uncleanness, decay, disease, and dirt go together. I Over the preservation of the purity of holy things the sons of Levi had to watch (1 Oh 2523). The sins of Israel were considered to affect the holy place and render it unclean. Consequently, on the great Day of Atonement, expiatory blood was sprinkled on the aiter horns to cleanse the tent of meeting (Lv 16<sup>16.19</sup>). Similarly, in Ex 23<sup>56</sup> special sin-offerings of a slaughtered hullock were needed for 'cleansing' (properly 'unsinning,' Heb. Nan; see Driver, ad loc.) the altar. Cf. Lv 815 1449 (in ref. to a house contaminated with leprosy), Ezk 'unsinning,' Heh. Nun; see Driver, ad loc.) the altar. Cf. Lv 815 1449 (in ref. to a house contaminated with leprosy), Ezk 420.22.23 4518. A high degree of sanctity belonged to holy vessels, so that any who touched one became affected by its magic circle of tabus, or, in the language of the original, 'hecame holy' (179). According to Nu 415, death might result from such contact. In this connexion we may note also that a special and necessary condition in the manufacture of sweet incense was that it should be pure (Baudissin, Stud. zur zem. Rel., Leipzig, 1878, ii. 461.; Ex 8034. 33 8729).

(g) The sacredness of certain animals, such as the camel, ox, cow, horse, pig, mouse, etc., is an obscure subject discussed by Robertson Smith in *Rel. Sem.*<sup>2</sup>, 271 ff. Probably not the same element, but varied elements, operated in various cases in determining the sacredness of an animal and the sacrosanct character of its flesh. just here that we come to one of those interesting meeting-points between the idea of uncleanness The unclean and the ideas of holiness and tabu. animal may not at ordinary times be sacrificed, because it is a specially sacred animal (Rel. Sem.2 290). It is only on specially solemn occasionsannual public celebrations or special crises—that such a sacrifice can take place. This may partake of the character of a mystic piacular sacrament or ceremony. One operative cause that constitutes an animal sacred was held by Robertson Smith to be the fact that it was originally regarded as the totemic ancestor of the clan. Subsequent writers on this subject are disposed to abandon this view. Other reasons than totem ancestry are assigned by Benzinger.2 In the case of the pig it was holy as belonging to the Adonis-Tammuz legend, or it was sacred to Ninib (Zimmern, in KAT'3, 409 f.). In other cases, as in that of the hare, magical or demonic powers were ascribed to it. The Arabs used the head and feet as charms (Rel. Sem. 2133). On the sacredness of the horse (cf. 2 K 2311 in reference to sun-worship; Rel. Sem. 2293), the mouse (Is 6617) and the swine (654 6617), explanamouse (Is 6617), and the swine (654 6617), explanations will vary, since the motives are various. One operative element is suggested by Agatharchides operative element is suggested by Aganuacinues (K. Müller, Geographi gracei minores, Paris, 1855, i. 153 f.) in his account of the troglodyte polyandrous nomads of E. Africa, who derived their whole sustenance from their flocks and herds. 'They gave the name of parent to no human being, but only to the ox and cow, the ram and ewo, from whom they had their nourishment.' We have already seen that the sacredness of the palintree is probably due to a like reason. 'The beasts tree is probably due to a like reason. 'The beasts are sacred and kindred beings, for they are the source of human life and subsistence. They are killed only in time of need, and the butchers are unclean, which implies that the slaughter was an

1 Hence in Bahylonian magic, fire and water are summoned to the magician's aid in expelling demons (see 'Magic,' in *HDB* iii. 200).

2 Heb. Archäol.<sup>2</sup>, Tübingen, 1907, p. 403f. See the instructive note hy Bertholct on Lv 11 (pp. 37-40), in which the varied motives and traditions of ancient and primitive races are set forth. While due weight is assigned to the theory of totemic ancestors as applied to Israel (p. 40), other causes, especially demonic and magic, are likewise admitted.

impious act' (Rel. Sem. 296f.). Owing to the polyandrous character of this nomadic people, the cow would be regarded as more sacred, since man is nourished by its milk, and kinship is also reckoned through woman.1

(h) As certain portions of space were regarded as holy and subject to restrictions of human use, so also were certain portions of time. Certain holy seasons were regarded as belonging to or specially related to God, as were certain persons or things. Consequently human actions during these holy seasons were specially limited or conditioned.

Among the Babylonians, special importance belonged to the solemn festival held at the beginning of the year called Zagmuku, or in Assyrian rɛ̃s̄ satti, 'beginning of the year' (Heb. אָלָהָ הַאָּדָה), which was synonymous with the feast of Akitu. It was a festival in which Marduk was carried in procession on a sacred barque, and Nabu proceeded from his temple in Borsippa to salute his father Marduk. On this sacred day—the Babylonian New Year's Day (i.e. 1st of Nisan)—the king performed the ceremony of 'taking hold of the hands of Bel (i.e. Marduk) and receiving from him royal authority. In the light of this custom, it is highly significant that we read in the annals of Nabonidus that in the ninth year, one of national disaster, 'the king did not visit Babylon (Tintir-ki) in the month Nisan. Nabu went not to Babylon. Bel came not forth. The Akitu festival ceased' (ba-til). See Nisan. Schrader, KIB iii. 130.

Among the early Semites the moon was determinative of the sucred days of the calendar. In the lunar month of 29½ days the sacred days were, as we learn from the pre-Exilic Heb. prophets (Am 85, Hos 213 [AV v.11], Is 115; cf. 2 K 423), the New-Moon and the Sabbath. The appearance of the new moon signalized the commencement of the month (cf. Sir 43<sup>6-8</sup>). Conjoined with the New-Moon, mention is made of the Sabbath. A remarkable list, discovered by Pinches (PSBA, 1904, p. 51f.), places the significance of the Hebrew Sabbath in a somewhat new light. In Babylonian, sapattu is the name given to the 15th day of the moon, or beginning of the 3rd quarter, i.e. full moon. In the days of the Ptolemies, as we learn from an inscription at Narnaka (?)<sup>2</sup>, the days on which the sacrifices were offered in Phænicia were new-moon and full-moon.8 So also among the Hebrews the festivals of *Massoth* and *Sukkoth* began on 15th Nisan and Tishri respectively.

From these facts Meinhold has drawn a sweeping inference. He From these facts Meinhold has drawn a sweeping Inference. He holds that in primitive Israel, down to the close of the Judman Kingdom, Sabbath meant only the full-moon celebration. He regards Exekiel as the originator of the sanctity of the Sabbath as a seventh day celebration (Exk 461; cf. 2012 18.18.20.21 228 2323). But, if this be the case, it is difficult to see on what ground Exekiel is justified in reproaching Israel for the nonobservance of a recent innovation without the hinding force of old usage. On the other hand, a variety of OT passages conducts us to the inevitable conclusion that the seventh-day Sahbath of a seven-days' week was an ancient pre-Exilic institution. For in Israel the sanctity of the number seven was evidently fundamental. We have it in the Niph'al form yay', swear': and in derivatives byfore. 'oath': and in the name revent'; and in derivatives nyary, 'oath'; and in the name Be'ersheha'. Moreover, the seventh day of rest was parallel to the seventh year of release in early legislation for the slave, and also for the field, which was to remain fallow (Ex 212 2310; ct.

101 the statement of Herodotus (iv. 180) that the Lihrans would not touch oows' fiesh, though ithey ate that of oxen. Here, as in so many other cases, utility consciously or unconsciously co-operated in enforcing this abstinence from the fiesh of so valuable and necessary an animal as the cow to a primitive nomadic race. Respecting sacred animals in ancient Exypt, see art. Edyptian Religion, vol. v. p. 2441, and especially Wiedemann, Der Tierkult der alten Aegypter, Leipzig, 1912. (i) Various theories have been advanced for

2 Von Landau, Beiträge zur Allertumskunde des Oriente, il. (Leipzig, 1899). Die phoniz Inschriften, no. 105, p. 461., cited in the reading is doubtful. oplan moongod, who is in ZDMG lxvi. [1912]

the sacredness of the number seven. Wellhausen (Proleg.<sup>2</sup>, Berlin, 1883, p. 117) and others, who base the week or seven-day portions of the month merely on the moon phases, do not indicate a probable origin for the widely prevailing and firmly rooted tradition among the Semitic peoples (cf. Rel. Sem.2 181 f.) of the sacredness of the number seven. Without committing ourselves to Winckler's astral theories, we may agree that Schrader, Winckler, Zimmern(?), A. Jeremias, and Benzinger are justified in holding that the sacredness of the number seven is based on the seven planetary deities, including moon and snn. The order of these planetary deities in ancient Babylonia varies. Zimmern (KAT \* 623) says that the original order was: Moon (Sin), Sun (Samas), Mercury (Nabu), Venus (Istar-Dilbat), Mars (Ninip), Jupiter (Marduk), Saturn (Kaimanu). Probably the seven-branched golden candlestick in Zcc 42t, with its seven lamps, which (v.10) correspond to the seven eyes of Jahweh, is based on the seven planets of the celestial world.

The Hebrew Sabbath signified, according to its

Hebrew etymology, that it was a sacred day, i.e. consecrated to Jaliweli, in which ordinary human employments ceased (Gn 2<sup>2,8</sup>, Ex 20<sup>8-11</sup>, etc.). In this sense the primitive Heb. Sabbath corresponded to the Bab. seventh day, which was more strictly beset with restrictions, like the Jewish post-Exilic Sablath. The seventh day in Babylonia was sacred to Kaim(v)anu, or Saturn, the planet of evil for-This character attaches to the 7th, 14th, 21st, and 28th days of the Bab. month. We here cite the following from iv. Rawl. 32 respecting the 7th day of the month Elul. This 7th day was dedicated to Marduk and Sarpanitum:
'Evil day. The shepherd (=ruler) of the great nations
shall not cat flesh roasted on coal, food brought into contact

with lire(?); shall not change his coat, shall not put on clean garments; shall not pour out a drink offering; the king shall not mount

the chariot; shall not announce any decision; in the place of secrecy

of secrecy
the soothsayer shall not deliver an oracle.
The physician shall not lay his hand on the sick one.
For the discharge of business (the day) is not sulted.'
Likewise on the day of full-moon Gudea (c. 3000 B.C.), in a tablet to which Winckler refers, makes the statement: 'The work of their (i.e. the workman's) hands ceased . . . no corpse was buried . . . no man who had a suit at law went to the place of the oath' (Religionegeschichtlicher und geschichtlicher Drient, Leipzig, 1906, p. 61, cited by Benzinger in his Heb. Archäol.'2, 390).

In nomadic Arabia the Hajj corresponds to the sacred processions of the gods on their barques in the Bab. towns. The original Hajj, or pilgrimage to Mecca, was in the month Rajab, which corresponds to the Heb. Nisan. This, with traces of other early customs of Arabic heathendom, became adopted into those of Islām. But Ramadān became the most sacred month of the Muslim (Wellhausen, Restc<sup>2</sup>, 79). The rule for the hajji is that he must entirely abstain from secular employments and devote himself wholly to his religious duties. Similarly a 'sarah in Hebrew is the time when man is under such restrictions' (Marti). Muhammad's rule of conduct is stated in Qur. v. 96: 'O ye who believe, slay no game while ye are on a pilgrimage.' In fact, the restrictions as carried ont by orthodox believers during this 'truce of God' are grotesque.1 The thirty days' fast during Ramadan involves abstinence from food, drink, and intercourse with women, from sunrise to sunset. It 'kindles in Moslem spirits, even of the wild Aarab, a new solemnity of religion' (C. M. Donghty, Arabia Deserta, Cambridge, 1888, i. 509). For it was during this month that Muhammad retired for medita-

I See Sell, Faith of Islam?, London, 1896, p. 291, and citation from Sahihu'l-Bükhari, l. 458. The pilgrims are girded with the Gram, or 'pilgrims' loin-cloth, which covers them to the knee; and a lap may be cast over the shoulder. They are henceforth bare-headed and half-naked; and in this guise must every soul coter the sacred precincts' (Doughty, Ar. Des. 11, 479).

tion to the cave of Hira, and the Qur'an was sent down from the Seventh Heaven. Just as Rajab corresponded in time to the month Nisan, 80 Ramadan corresponded to Tishri, the seventh month of the ecclesiastical Bab.-Heb. calendar. We can hardly doubt that Jewish traditions of the great Day of Atonement (the 10th of the month) influenced Muhammad's institution of the Ramadān.

Respecting Mnharram, or the first month of the Muhammadan year, and the mourning celebrations of the Shi ah sect who commemorate the deaths of Ali and his two sons, Hasan and Husain, see Sell, 306 f. For a graphic description of a Persian Tazi, see Arminius Vambéry, Life and Adventures,

London, 1884, p. 68 f.

(j) Certain operations or processes were also invested with special sanctity. Among these may be mentioned the sacrificial act, of which the essential element is the shedding of blood. Withont entering into the intricate problem as to the fundamental and primitive meaning of sacrifice (q.v.), which appears to have involved the conception of a blood-tie between the Deity and the worshipper, there can be little question that the blood, which embodied life (Gn 94, Lv 1711.14, Dt 1223), was held to possess a magic potency. Doughty (i. 499) points out that it is the custom of the Arabs to slaughter a young sheep and smear the blood on camels and cattle as a protection. The recent researches of Westermarck in Morocco reveal that the blood of the slaughtered victim was believed to visit a curse on the object for whom the sacrifice was offered.2 It is hardly possible to doubt that in the original form of the rite described in Exodus the smearing of the blood on the lintel and doorposts lind special reference to the plague-demon (hyper, Ex 122 [J]), over whom it possessed a magic power of arrest. Among the Greeks the solemn act of sacrifice was attended by the silence of the worshippers enjoined by the word εὐφημεῖτε, favete linguis. Iphigeneia, when led to sacrifice, is bound with the 'speechless might of gags' (Æsch. Ag.

Respecting vows, special note should be taken of the vx, of which we have a vivid example in 1 S 1424, where Saul binds his warriors under oaths involving self-imposed curses not to eat or drink until the enemy is wholly destroyed. Another example meets as in Ac 23<sup>12, 21</sup> (cf. Ps 132<sup>31</sup>). The enactments concerning the vows of men and women were strict according to the late legislation in Nu 30, even in the case of rash yows (Lv 54.). The special and extraordinary vows involving abstinence of the Nazirite are codilied in Nn 6 (sec ICC).

War presents an interesting example of 8 sacred mode of activity, based on the conception of the patron-deity of a State who is its war-god. For war, like other State enterprises, was undertaken under the sanction and direction of the patron-deity. Thus Sennacherib begins his depatron-deity. Thus Sennacherib begins his description of his fourth campaign in his Prisminscription, col. iii. 42: 'In my fourth campaign in the patron than I sum. Asur inspired me with confidence; then I summoned my mighty forces.' Asurbanipal (in the Rassam cyl.) recites the names not only of Asur but also of Sin, Samas, Bel, Nabn, and Istar of Nineveh and also of Arbela. Istar was the Assyrian war-couldes. So also among Consenits (see to Form goddess. So also among Canaanites (acc. to Egyptian data) were Anat and Reshef. Similarly, on

unn data) were Anat and Reshef. Similarly, on 1 Robertson Smith, Rel. Sem.2, 313f.; Herod. lif. 8. 'The sacrifices eaten in fellowship in the desert... are as a calling of the Lord the Aligiver, in his guests, a mystical communion of their bread and salt with Him' (Doughty, i. 452).

2 See his paper, 'The influence of Magic on Social Relationships,' in Sociological Papers, il. (London, 1996) 160.

3 Haddon suggests that the demon in the more primitive forms of the rite was supposed to consume the blood, and was thereby arrested or placated or diverted from his quest.

4 See art. 'Gelübde,' in PRE3.

the Stone of Mesha', it is the god of Moab, Chemosb, who says to Mesha': 'Go take Nebo against Israel' (line 14). Among the Hebrews, Among the Hebrews, Jahweh Sebhaoth, Jahweh of the eelestial star-hosts as well as of Israel's armies (cf. Jg 54 20), goes before Israel in the ark carried into the battlefield (1 S 4<sup>9-6</sup>), and is consulted by the priest-soothsayer with the ephod before every military operation (1 S 14<sup>18-19</sup> 23<sup>9</sup> 30<sup>7-8</sup>, 2 S 5<sup>23</sup>). The Syrians had the same custom; for we read in the Annalinseription of Ašurnaşirpal (col. iii. 20) that in overcoming a hostile Syrian trihe the bara, or continuous who went at the head of their soothsayer-priest, who went at the head of their host (alik pan ummanatisunu), was eaptured. Like other Semites, the Hehrews inaugurated war hy sacrifiees. This was said to 'consecrate' war (52) πρηγρ, Mie 33, Jer 64, cf. Jos 33); hence the burnt-offerings at the opening of a campaign (Jg 6<sup>20, 26</sup> 20<sup>26</sup>, 1 S 7<sup>9</sup> 13<sup>10</sup>, cf. 1 S 11<sup>7</sup>). With this conception of holy war and consecrated warriors (Is 133) we must connect the sexual abstinence which was maintained during military expeditions among Hebrews and Arabs (Rel. Sem. 2455; ef. 1 S 215, 2 S 119 With this we must also associate the gruesome enstom of the 'ban' (n'n), which surrounded all objects, animate and inanimate, captured in war, and forbade their appropriation to human uses. This meant the wholesale destruction of the 'devoted' objects expressed by the denominative Hiph'il of the same root h-r-m (see p. 753°); cf. Jos  $6^{17}$   $8^{2\cdot 27t\cdot}$ , Jg  $21^{11t\cdot}$ ,  $1\,8\,15^{7\cdot 23}$ , in which v.  $^{18}$  is a close parallel to the Stone of Mesha', lines 14f., 32. In the latter case Mesha' devotes to 'Aštar-kemôsh (line 17, החרתה) the entire population of Nebo, both men and women.1

(k) The sacred name of Deity had a special and awful potency, since in ancient Semitic conceptions it involved the actual presence and personal power of the Deity, which, when the name was uttered, were summoned into active exercise. Thus the tetragrammaton (ππ) was too awful for pronunciation by ordinary human lips, according to the usage of post-Exilic Judaism. We know that in the 3rd cont. B.C. it was avoided in the public reading of the Hebrew Torah, της, reproduced in the LXX by κύριος, being substituted for it. Even the combinations π and ν, though abhreviations of the sacred name, came to be avoided as numerical signs of 15, 16 (m and m being respectively substituted). On the nse of the Divine names and those of the Hehrew patriarchs in exercisms, and generally in magical formulæ, see artt. 'Exercism' and 'Soreery,' in HDB i. 812, iv. 604; Conybeare, in Trans. of the Third Internat. Congress for Hist. of Relig., Oxford, 1908, ii. 358 ff. The wide prevalence of the potency of sacred names in Bab. incantations needs only to be mentioned here.

3. Holy persons.—(i.) Chief among these were the priests. In Ex 29, Lv 8°, elaborate details of the rites of initiation are given wherehy priests are in-

3. Holy persons.—(i.) Chief among these were the priests. In Ex 29, Lv 89, elaborate details of the rites of initiation are given wherehy priests are installed in their office. In these rites we shall merely note (1) the washing of the person with water (Ex 294; cf. washing the garments in Ex 1911-14 at Sinai); (2) splashing bullocks' and rams' blood on the altar-horns and round ahout it (vv. 101.16), the ram's blood heing placed on the right ear, toe, and thumb of the Aaronids (v. 20); (3) special garments and 'holy crown' (v. 2); (4) anointing with oil (v. 7). The fundamental conception underlying these eeremonial cleansing operations (washing and blood-sprinkling) is to remove all contamination which would disqualify the priest for his sacred functions. These functions are defined in Nu 1832 as the keeping of the tent of meeting, the handling of the holy vessels, and the approach to the altar. In the later Heh. legislation, which has just been

1 A further treatment will be found in art. 'War,' in EBi, § 2, and F. Schwally, Sem. Kriegsaltertumer, Leipzig, 1901.

quoted, these functions belonged to the sons of Aaron. It is, however, fully recognized that the substance of P's ecremonial legislation is very ancient; and, if we possessed fuller documentary material from ancient Babylonia, we should probably be able to show a larger number of close parallels between the ecremonies of initiation for the Babylonian priesthood and those contained in P than have yet come to light. Several interesting and important analogies may nevertheless be noted.

(a) The king (q.v.), like the priest, was anointed with oil (0.72). Anointing (g.v.) doubtless arose from the ancient magical eustom of smearing or pouring unguent on the body to endow the subject with certain qualities. Thus the Arabs of E. Africa believe that lion's fat inspires a man with boldness. so that a wild beast flees from him (see  $GB^2$  ii. 364f.). From the Tell el-Amarna tablets we learn that the custom of anointing kings prevailed in Western Asia in the 15th eent. B.C. In a letter from Adad-nirāri, king of Nuḥašši in N. Syria, addressed to the king of Egypt (Sehrader, KIB v. no. 37), it is stated that a previous Egyptian king had poured oil on the head of the writer's grandfather and established him as king. Frazer's  $GB^2$ i. 137-156, and bis Lectures on the Early History of the Kingship (London, 1905), have familiarized us with the supernatural endowments attributed to with the supernatural endowments attributed to the early king, who was regarded as a deity or quasi-deity. Israel similarly stood in awe of the 'Lord's anointed,' whose person, like that of a priest, was sacrosanct (1 S 24<sup>6,10</sup>, 2 S 1<sup>14</sup>). The Assyrian king called himself the offspring or favourite of a god (binutu Asur, naram Sin).
Moreover, the king assumed pricetly functions. This we know to have been dono by David (2 S 617) and Solomon (1 K 8634). This was also the tradition in Assyria. Tiglath-Pileser I. (1109 B.C.) ealls himself isippu, or priest, of the god Samas. Sargon ealls bimself the saknu, or vicegerent of Bel, and the issakku, or chief priest, of Asur.

(b) Physical defects were disqualifications for a

(b) Physical defects were disqualifications for a Hebrew priest and also for a Bab. soothsayer (cf. Lv 21<sup>17-28</sup>). Among the Babylonians, squinting (saltu ēnā), lack of teeth (hepu sinnā), and a maimed finger (nalpi ubani) were accounted disqualifications (H. Zimmern, Beiträge, Leipzig, 1896–1901, p. 87).

Zimmern, Beiträge, Leipzig, 1896-1901, p. 87).

(c) As the Aaronie priesthood was hereditary, similarly the Bah. barûtu, or office of soothsayer, helonged to a sacred hereditary easte whoso functions involved special mysteries of knowledge (c.g. inspection of the liver). This tradition can easily be traced back as far as the time of Hammurahi (c. 2100 B.C.: see Zimmern, 82 f., 87).

(c. 2100 B.C.; see Zimmern, 82 f., 87).

(d) In the ritnal tablets of the asipu, or priest-magician, who dealt in conjurations (siptu) wherehy diseases were removed, or in expiations wherehy sins were atoned, we read (Zimmern, no. 26, col. iii. 19f.) that the masmasu (who held an office closely allied to that of the asipu) (Zimmern, p. 93) is to pass forth to the gateway, sacrifice a sheep in the palace-portal, and smear tho threshold and posts of the gateway right and left with its hlood (cf. Ex 12<sup>7</sup>[P]). Respecting these incantation-ritnals and the multiplicity of the sacred offices, see Zimmern, Beiträge, and the art. 'Priest,' in EBr<sup>11</sup>. Israel also in pre-Exilic days had the rô'ch, kōsēm, m'ōnēn, yidd'cnt, and ba'al cbh. Others are obscurely mentioned in Dt 18<sup>10, 11</sup>.

In early times the priest in Israel was essentially soothsayer, who declared the Divine will by Urim and Tummim, rods, arrows, or other forms of the sacred lot. Carrying the ephod, he gave the answers needed on any expedition. In early Arahia the kahin (Heb. [25]) was the soothsayer who employed the divining rods or arrows, denounced by Muhammad as an abominable work of

Satan (Qnr. v. 92; cf. Mic 5<sup>12</sup>, Jer 27<sup>9</sup>). Cf. art. 'Soothsayer,' in *HBD* iv. 598.

In later times the priestly function in Israel became chiefly ceremonial and sacrificial, while the function of soothsayer (kosem, etc.) was separate and specialized. Ont of the priest-scer of early times, called roeh, emerged the prophet (nabhi'), whose called roch, emerged the prophet (name), whose person as 'man of God' was also sacred, whose rod possessed magical power (2 K  $4^{29.81}$ ) as well as his garment (2 K  $2^{14}$ ; ef. Mk  $5^{27.81}$ ), on whom God's spirit rested, and to whom 'the word of the Lord' came. See art. 'Prophet,' in  $EBr^{11}$ .

One of the most primitive and significant as well

as non-ethical among 'holy' persons of the Semitic peoples was the kādēsh (sodomite priest attendant) and the k-dēshāh, or priestess-prostitute, who in-fested the Canaanite-Hebrew sanctuaries like the corresponding kadistu and harimtu of Babylonia. The wide prevalence of this phase of ancient Semitic life is attested by Gn 38<sup>21</sup>., 1 K 14<sup>24</sup> 15<sup>12</sup> 22<sup>45</sup>, 2 K 23<sup>7</sup>, Am 2<sup>7</sup>, Hos 4<sup>11</sup>, Dt 23<sup>17</sup> [Heb. <sup>18</sup>], and is especially connected with the Liter and C. A. Bester. ally connected with the Istar cult (G. A. Barton, Sem. Origins, London, 1902, p. 83; N. Nilsson, Etudes sur le culte d'Ichtar, Leipzig, Paris, and St. Petersburg, 1911; see, further, HIERODOULOI (Sem. and Form.)

[Sem. and Egyp.]).

(ii.) We have represented in Israel the conception of a holy people. Of this the locus classicus is Ex 19<sup>5, 5</sup> (JE), in which the privilege is made conditional on obedience to the terms of the Sinai-covenant. Israel is called a Divine possession above all the peoples of the world. But this was in reality the re-assertion of a long recognized fact. Israel was Jahweh's people, just as the Moabites were 'people of Chemosh' (cf. Jg 5<sup>11</sup>, Ex 15<sup>16</sup>). Israelites as individuals were just as truly sons and daughters of Jahweh. Similarly Palestine, the land occupied by Jahweh's people, was holy also (cf. Wis 123), and is called Jahweh's house (Hos 81 915, cf. 93 and Harper in ICC). All sacrifices outside Jahweh's land are, therefore, unclean. The corollary to this conception of Israel as a holy people is found in the prohibition of marriage with foreign races prescribed by later legislation (Dt 78). This became rigorously applied in the days of Ezra, who sternly repressed such connexions, whereby the 'holy seed' became 'mingled' and thus contaminated (Ezr 92L).

II. THE CONCEPTION OF HOLINESS RAISED TO AN ETHICAL LEVEL.—We have hitherto traced, though only in ontline, the far-reaching dominion of the conception of holiness in its earlier stage, over a wide extent of persons, material objects, and modes of human activity. In all of these holiness appears as a positive quality derived from close contact with a Deity or supernatural power which becomes deterrent and restrictive, circumscribing human activities which are free as to ordinary or non-holy objects. Holiness in primitive religion, like much clsc, is concrete and quasi-physical, and, moreover, is bound up with magical elements of tabu. We have now to investigate how in its more advanced stage it became gradually and partially emancipated from the material and magical characteristics of primitive religion as it became ethicized.

Holiness, as we have seen, is closely associated with the personality of Deity. That which is bronght most closely into contact with Him is most holy of all. Thus the hindermost recess of the Temple (777, rass), where His presence dwelt and where only the high priest on the most sacred day of the post-Exilic calendar (the Day of Atonement) could enter, was called the Sanctuary par excellence, the most holy place (artistic). Accordingly, sanctity, with all its associated elements of restriction and reserve, admitted of degrees until at length we come to the Deity Himself, who in His exalted and inaccessible loneliness and power is called by the thrice repeated and so emphasized !

'Holy' in Isaiah 63. The same principle that applied to things would a fortiori apply to God Himself. If eating the remainder of the shelamim (rendered peace-offerings'), which should be burnt on the third day, was an act of profanation because it was God's 'holy thing' (Lv 19<sup>3</sup>), it was a far more terrible thing to behold God Himself. No man can behold God and live (Ex 33<sup>20</sup>; cf. Jg 13<sup>27</sup>, Is 65). The quality in the Deity which avenged with terrible penalties all violations of His presence, dignity, name, or belongings was called 'jealousy,' and He was accordingly designated 'a jealous God' (אַל קנא, Ex 205 3414). Ex 205 3414)

God's position of inviolable supremacy and power was designated by this term with, and He Himself was with, 'holy.' But in His external self-manifestation He was invested with 'glory' (1927). These two characteristics of Divine personality—
'glory' and 'holiness'—are closely combined; but
with this distinction, that, while 'holiness' marks out His inaccessible exaltation and power, which are restrictive on human activities, His 'glory' exhibits Him in His earthly and visible self-mani-

festation (Is 6<sup>3</sup>; Baudissin, Stud. zur sem. Religionsgesch. ii. 82, 104-107).

The prophets, who were the great teachers of Israel, did not in any degree diminish, but rather exalted, these conceptions of Jahweh's unapproachable and terrible power and His manifested grandeur. The universality of His sovereignty and power is emphasized by Amos, by Isaiah, and above all by Deutero-Isaiah (Am 97, Is 63 40<sup>12-28</sup>). But the teaching of the 8th cent. Judean prophets did not end here. The stress which Amos and Isaiah placed on the righteousness of Jahweh and His ethical requirements (Am 56-11-21-27, Is 110-17-21-22 58-23) shifted the centre of gravity in religion from eeremonial to conduct. Ceremonial tabus and sacrificial forms count for little. In Jeremiah's teaching the externalities of Israel's formal religion have disappeared with the destruction of the State and the Temple. Jahweh has established a 'new covenant' with His people independent of external ordinances and enactments, for it is internal, spiritual, and personal: 'I will put my law within them, and in their heart will I write it' (Jer 31<sup>31-53</sup>).

The effect of all this was far-reaching, and it gradually brought about an 'Unwertung aller Werte'—a transmutation of all values, which affected the conception of the Divine Holiness and all related thereto. Since God's character and demands were essentially expressed in righteousdemands were essentially expressed in righteousness, this permeated also the essence of holiness whether in God or man. The fast wherowith a man is to afflict his sonl is to set the oppressed free and bestow bread on the hungry (Is 58%). 'Rend your heart, and not your garments' (JI 218). This affected the language, not only of prophecy, but of legislation. Circumcision was to be of the heart (mind), and not of the flesh only (Dt 1018 30%). It entered even into the priestly legislation of the guilt-offering (Lv 51.7), and in the 'Code of Holiness' linds its due place (253.5.5). This was doubtless a reinforcement of ethical elements which belonged to Israel's old religion, since all religion involves to Israel's old religion, since all religion involves social relations and a social order, and therefore these elements found a place in the older codes of legislation. But prophetic teaching gave them a new and primary importance, and they came to displace the externalities of ceremonial religion. This is manifest in some of the Psalms, e.g. 502-15 where sacrifices are repudiated as irrational; 5112 19, where the true sacrifices are a broken and contrite heart. Perhaps the most notable expression is to be found in Ps 15 (which reflects the spirit of Mic 67. 67: Who shall dwell in thy holy hill? He that walketh uprightly, and worketh righteousness, and is faithful in his thoughts [and not merely in

HOME 759

external acts].' The following verses expound this fundamental conception. Cf. Ps 24<sup>32</sup>, Sir 35<sup>2-8</sup>. <sup>12-17</sup>. \*

We have entered here into a higher realm and atmosphere, and these new conceptions would be fostered by the new conditions of post-Exilic Judaism, when there was a vast Diaspora, and the Synagogue with its worship took the place of the national Temple with its sacrificial ceremonial. Consequently prayer (which in some form accompanied sacrifice) now took the place of sacrificial ceremonial (which was legitimate only in the central Jerusalem sanctuary).

Moreover, we now find a tendency to shift 'holy,' which was ethical, from non-ethical things to personal objects, to which it can more properly apply. God in Deutero-Isaiah is 'Israel's Holy one' par excellence. Purity is closely associated with holiness, and has moral values. In Hab 1<sup>12-13</sup> 'holy' is applied to Jahweh in His ethical purity, which is so great that He cannot behold evil—an echo of Is 6<sup>3-7</sup>. From these ethical conceptions of God's holiness it is but a step to the conceptions of God's 'Holy Spirit' (Is 63<sup>101</sup>, Ps 51<sup>13</sup>, Wis 9<sup>17</sup>). Those who form God's retinue, the angels, are called 'holy ones,' since they are the 'sons of God' (Job 5<sup>1</sup> 15<sup>10</sup>, ef. Ps 89<sup>6-8</sup>).

Nevertheless, the old and primitive non-ethical ideas of holiness still held sway and persisted in post-Exilic Judaism. They permeated Ezekiel's ideal scheme (ehs. 40-48) of Israel's restored commonwealth, and the subsequent Levitical legislation. We even find them in the Mishna (Yad. iii. 2. 4f., iv. 5. 6; cf. Eduyyoth v. 3), where it is stated that the canonical Holy Scriptures

it is stated that the canonical Holy Scriptures 'defile the hands,' according to the teaching of the schools of both Hillel and Shammai. In other words, this holiness thereby becomes contagious (Weber, Jüd. Theol.', Leipzig, 1897, § 21. 1). Texts from these inspired Holy Scriptures are still employed by Jews as magical charms and prophylactics, just as verses from the Qur'ān are nsed among Muslims. See artt. 'Demon,' 'Magic,' 'Soreery,' in HDB. In fact, the Arabic language of the Qur'ān is sacred, and any translation into another tongue is a violation of that sanctity (Sell, Faith of Islam', 265, 301-305). Among peasants in the inland regions of Syria, both Christianity and Islām are but a thin veneer over forms which are essentially those of ancient Canaan. Ethical monotheism is not the dominant religions influence,

What, however, unites the most primitive ideas of holiness to the later and modern conceptions, which are ethical, is the fundamental principle of close union and association with the Divine. This is common to the present and the hoary past. Whatever is deemed incompatible with such association is necessarily excluded. Holiness, therefore, will always be restrictive, and jealonsly close its doors to all forms of human action which are held not to be in harmony with this fundamental principle. And with holiness so restrictive and secluded there is also involved a positive element

but a belief in the local nabī (whose tomb is sacred),

or the local wall and jinn, who are merely substitutes for the former gods and demons.

of Divine power.

LITERATURE.—The dissertation on 'Holiness' by W. W. Baudissin, in his Studien zur sem. Religionsgesch., pt. ii., Leipzig, 1878, still remains a very valuable treatment, especially from the standpoint of OT usage. A useful list of earlier literature is given on p. 31. Valuable material respecting Arabio heathendom may be gathered from J. Wellhausen, Reste arab. Heidentums, Berlin, 1887 (21897). W. Robertson Smith's Religion of the Semiles 2 (London and Edinb. 11894) is still the best contribution to the subject, especially owing to its

full presentations of Arabio illustrative materials as well as those derived from the wider field of the comparative study of religion. M. J. Lagrange's Etudes startes religions semitiques?, Paris, 1905, esp. chs. iv.-wili., contains a mine of well-sitted material in which the results of Assyriology find their due place. In addition to these, J. Skinner's art. 'Holiness,' in HDB, and R. Kittel's 'Heiligkeit Gottes im AT,' in PRE3, should be consulted. Among commentaries, see G. Buchanan Gray, 'Numbers' (ICO, Edinburgh, 1903), and A. Bertholet, 'Levitcus' (Kurzer Handkommentar, Tübingen, 1901) (see esp. on ch. 11); K. Marti, Geschichte der israelitischen Religion's, Strassburg, 1903, §§9-11; B. Stade, Biblische Theologie des AT, Täbingen, 1905, i. §§ 46-70. Cf. also the other works cited in the course of the article.

HOME.—The word (see OED, s.v.) signifies 'a dwelling-place,' regarded from the moral and the social point of view as the fixed residence of a family, providing for its members a place of refuge from the labour and turmoil of active life, and cherished as the abode of those to whom a man is bound by the closest and most intimate ties of relationship. The ideas which the word suggests are, accordingly, those of permanence, security, familiarity. To be 'at home' implies that a man has reached, at least for a time, the end of his wanderings (cf. Pr 278); that he is beyond the reach of the perils of wayfaring; that he is no longer a stranger and foreigner, but a member of a household, surrounded by those who understand him and sympathize with him. When, for example, St. Paul speaks of the Gentiles as okcor rov deou (Eph 219), he is contrasting their former outcast and alienated condition with the privileges of membership in God's family or household. Under all the aspects mentioned above, death is sometimes spoken of as 'going home' (cf. Ec 125 'long home,' with Plumptre's note), and the disembodied state is described by St. Paul as the being 'at home with the Lord' (2 Co 58).

There were, doubtless, numerous instances of beantiful domestic life among the Hebrews. The narratives (J and E) of the 9th and 8th centuries B.C. throw much incidental light on the family life of ancient Israel. There was apparently a tendency (except in the case of the monarch) towards monogamy; and, though paternal authority was absolute, and extended to the jus necis, we do not find instances of harsh or unjust treatment. The same remark applies to slaves. They were the private property of their masters, but despotic rights do not seem to have been as a rule abused. The duties of hospitality were held in honour, and guests were welcomed with kindness and liberality. The Book of Proverbs illustrates the high esteem in which family life and family duties were held in ancient Israel. As regards the later Judaism it has been said that 'there were no homes like those in Israel,' and two familiar Talmudical sayings are probably the fruit of common experience: 'Marriages are made in heaven,' and 'God dwells in a pure and loving home' (see A. Edersheim, Life and Times of Jesus the Messiah, London, 1883, bk. ii. ch. 9, and JE, s.v. 'Family and Family Life'). To a smaller extent the feeling for 'home' may be traced in classical antiquity (see, for instance, Hom. Od., passim; Soph. Ajax, 850-860, Phil. 492-496; Ovid, Trist. iii. 4.53 fi.; Virg. Edl. i.; Tib. Eleg. i. 1; Plin. Epp., etc.; cf. S. Dill, Roman Society from Nero to M. Aurelius, London,

<sup>\*</sup> In the face of Bertholet's extreme statement that ködesh and kadösh are nowhere to be found in the Psalter in the special sense of moral holiness (Bibl. Theol. des AT, Tübingen, 1912, ii. 249, footnote), it is at least obvious from Ps 15 and 513 that an schical as well as ceremonial connotation is implied.

760 HOME

1904, p. 188 f.; and, for the witness of Latin inscriptions, etc., see hints in C. Bigg, The Church's Task under the Roman Empire, Oxford, 1905, Lect. 4), and also in India (cf. the statement of the Panchatantra, v. 49, that even heaven is not so precious as one's birthplace, however humble it may be; see, further, Böhtlingk, *Ind. Sprüche*, Leipzig, 1870-73, nos. 1013, 1943, 6048, 6939); but it has

been said with truth that 'home is specially Teutonic, word and thing.... The life of home has become the great possession, the great delight, the great social achievement of our race; its refuge from the storms and darkness without, an ample compensation to us for so much that we want of the social brilliancy and enjoyment of our Latin brethren. Reverence for the household and for household life, which some of its duties a keen relief for its pleasures, this has a high sense of its duties, a keen relish for its pleasures, this has been a strength to German society amid much to unsettle it' (R. W. Church, The Gifts of Civilisation, new ed., London, 1880, p. 336 ff.).

In England the new conception of life which Puritanism introduced tended powerfully to raise

the standard of family life.

'Home, as we conceive it now, was the creation of the Puritan.
... The sense of spiritual fellowship gave a new tenderness and refinement to the common family affections' (J. R. Green, Hist. of the English People, London, 1880, iii. 19).

So Emerson, writing in 1847, testifies that 'domesticity is the taproot which enables the [English] nation to branch wide and high. The motive and end of their trade and empire is to guard the independence and privacy of their homes' (English Traits, London, 1856, ch. vi.).

The special development, then, of the homeforming tendency seems to be characteristic of the Teutonic race; but it is a common human instinct. and, as such, finds its peculiar consecration in the gospel. Naturally, the spread of Christianity in the pagan world was responsible for many trage-dies of domestic life. Christ's own words foreshadow the strain upon affection and conscience which would inevitably follow conversion (Mt 10<sup>21, 34, 37</sup>), and such a passage as 1 Co 7<sup>10</sup> indicates one class of problems that was bound to arise. In early Christian documents we read of wives embracing Christianity and refusing to live with their husbands (e.g., Just. Apol. ii. 2; cf. Eus. HE iv. 17); in the persecutions, frequent instances are recorded of parents pleading with their children, and children with their parents; of sons disowned by their fathers, and slaves by their masters; of wives divorced, and children disinherited (see Harnack, Expansion of Christianity, Eng. tr., London, 1904, bk iii. ch. 2, for references). But, where the gospel had free course, it issued in the consecration and elevation of family life—a fact of which the Apologists supply ample evidence.

The fundamental weakness of family life in Roman society was the exaggerated idea of the patria potestas. Domestic duty, it has been well said, was summed up in a single article—that of absolute submission to the head of the household. It was only by a very gradual process that the wife rose from being the chattel and slave to be the equal of her husband. Filial affection was the rarest of virtues under a system which placed the son at the absolute disposal, and under the despotic con-trol, of his father. In the early centuries of the Empire, various reforms tended to mitigate this state of things. Not only the sons, but the slaves, of the Roman householder found their position improved by a series of legislative reforms (see Lecky, Hist. of Europ. Morals, London, 1869, i. 297 ff.). But, as has been pointed out, the moral consecration of family life was the special task of Christianity.

This consecration may be said to begin with our Lord's subjection to the discipline of home life at Nazareth (Lk 251) and with His readiness to hallow family life by His presence and blessing (see Jn 21th 111th, Lk 10th). In his letters to the churches of Asia (Eph, Col., Philem.), St. Paul deals with the Asia (Eph., Col., Philem.), St. Paul deals with the leading principles of home life in some detail, possibly because 'in the social traditions of "Asia" a certain prominence appears to have attached to

the family idea' (H. C. G. Moule, Colossian Studies, London, 1898, p. 231 f.). Each natural relationship—that of husband and wife, that of parent and child, that of master and servant—is exhibited in the light of the Christian ideal. The teaching of 1 P 2<sup>18-37</sup> is similar in its tone, and is addressed to readers of the same race. Perhaps the leading idea of St. Peter is that the gospel confirms and sanctifies the element of order and subordination which lies at the root of stable social life. Both to wives and to servants he preaches the duty of 'subjection.' St. Paul's precepts (Eph. L.c.) seem also to apply, in the region of family life, the general duty of mutual submission (Eph 521); but he lays more stress on the principle of active love which subordinates self to the service of others. Both teachers appear to regard the family or home as the appointed sphere of moral discipline and probatom for the great majority of mankind, and St. Paul derives its sanctity from the fact that it reflects the mysterious relationships which subsist within the very being of Deity itself (cf. Eph 315 5226.). should also be remembered that to the mind of our Lord Himself the family presents the closest analogy to the new social order which it was His analogy to the new social order which it was his mission to reveal. God is the Father of a family; mankind are His children, and all are 'brethren' (Mt 23<sup>8-10</sup>; cf. the use of ἀδελφοί, ἀδελφότης in the Epp., and see Harnack, op. cit. bk. iii. ch. 3). In such early documents as Clem. αd Cor. 1, Polye. ad Phil. 4, we find echoes of this line of teaching and proofs of its actual influence.

and proofs of its actual influence.

It does not fall within the scope of a short article to deal with the social and economic tendencies, or the moral and scientific theories, which threaten the Christian home. It may suffice to point out that the purity and sanctity of Jewish homes was mainly due to the prevailing regard for the chastity of woman, and that, where there is any lowering of standard in this particular, the institution of home is threatened. In Rome the growth of moral corruption, avarice, the love of ease, and extravaganco led directly to the aversion for marriage, the perilous consequences of which Augustus strove to avoid by direct and drastic legislation (see Marquardt, Das Privatleben der Römer, Leipzig, 1879, p. 71 ff.). The rise of monachism and the passion for comobite and solitary life became the occasion of vchement and one-sided disparagement of family duties and the frequent rupture of family ties (see Lecky, op. cit. ii. 125). Nor can it be denied that the institution of family life is threatened in modern times by a spirit of individualistic selfishness which prefers the comparative freedom and ease of a celibate life to the duties and responsibilities involved in marriage. But, apart from considerations of this kind, we may observe that the possibility of home life, as contemplated by the NT writers, depends to some extent upon conditions which can no longer be taken for granted. The problem can no longer be taken for granted. The problem of the family is closely connected with the modern problem presented by the aggregation of masses of people in large cities; and it is certain that deeppople in large cities; and deeppople in large ci seated industrial causes are tending to undermine and break up family life. To a large proportion of the working classes in Enrope and America, anything like home life in its highest form is virtually prohibited by the conditions amid which they pass their lives. A further danger which threatens home life is involved in defective and unspiritual ideas of what constitutes true human well-being. It is the obvious duty of the Christian Church to encourage any corrective tendencies, any

HOME 761

housing of the poor, multiplication of suburban homes, improved sanitation, etc. (on this subject, see F. G. Peabody, Jesus Christ and the Social Question, London, 1901, ch. iii.). Further, family life is threatened by certain socialistic theories, which find in the family an insuperable obstacle to their cherished ideal of a corporate life in which personal interests are to be sacrificed to the welfare of the community. Such theories regard marriage and the family as a stronghold of individualism, hindering the citizen from 'complete devotion to the socialist ideal' (Peahody, op. cit. p. 140 ff.). On the other hand, the tendency of anthropological speculation seems to be in the direction of vindicating against socialistic attacks the permanent function of the family, regarded as the highest result of the historic process of social evolution. And, again, if it is true that the individual finds his true self-development in subordination to or co-operation with his fellows, if corporate life is in reality the great instrument for training character, it is obvious that the family has higher social significance than was once perceived. Home life is the fundamental form which life in common can assume. It involves precisely that training in social affections, that discipline in self-sacrifice and mutual service, which corresponds most closely to the Christian conception of worthy human life.

'The family exhibits in the simplest and most unquestionable types the laws of dependence and trust, of authority and obedience, of obligation and helpfulness by which every form of true activity is regulated. . . In the family we learn to set aside the conception of right and to place in its stead the conception of duty, which alone can give stable peace to peoples or to men' (B. F. Westcott, Social Aspects of Christianity, London, 1887, Lect. if.).

The gospel, then, gives a complete and final sanction to the institution of home. In the home, —'Charity begins at home'—Christianity finds the needful conditions for training men in the highest and most Christ-like of all graces (1 Co 13). In the home, character is trained and ripened for the wider service of man that lies beyond and outside its range. By a round of common duties and mutnal services, men and women are educated for the larger ministries of citizenship and church-manship. Thus the gospel transfigures the home by treating it as the ultimate type of the new society mich Christ came to establish on earth. God is a heavenly Father; men are His children, linked to each other by ties of brotherhood; the Church is His household (1 Ti 315), in which all have their mutual duties and peculiar calling, and all alike are dependent on the Father's gifts of grace (Mt 23<sup>85</sup>, 1 Co 12<sup>25</sup>, Eph 4 and 5). So St. Paul enjoins Timothy to treat those committed to his pastoral charge as relatives of the corresponding age—the aged men as fathers, the elder women as mothers, the young men and women as brothers and sisters (1 Ti 51st.). Again, it is noticeable that the gospel does not multiply directions in regard to the Christian's conduct in the larger spheres of the conduction of politics of the conduction of politics of human life—the world of business, of politics, of professional life. It confines itself to regulating family life with special minuteness and care; nor does it attempt so much to safeguard the rights of individuals as to enforce their duties. Thus, in Eph. and Col., St. Paul gives a summary of the simple but far-reaching rules which should control He addresses in turn husbands, wives, home life. children, and servants—that is, all members of the typical household. Each in his turn is exhorted to bear in mind his or her duties and the rightful claims of others, and thus there emerge the great principles that give to home life its sacredness and

importance.
(i.) There must be before all else the fear of God, the root and ground of Christian life with all its manifold relationships; the fear of God regulating

the desire for wedded life and controlling the choice of a partner (cf. 1 Co 7<sup>59</sup>); inspiring the 'nurture and admonition' of children and lending a sanction to their obedience (Eph 6<sup>1x.</sup>); imparting dignity to the necessary tasks of the household and even to the fulfilment of menial duties (Eph 6<sup>51</sup>, Col 3<sup>22</sup>). All is to be planned and fulfilled 'in the Lord,' in union with His mind and under the leading of His Spirit; all duties are to be discharged 'as to the Lord and not unto men,' in the consciousness of His continual presence and in single-hearted desire to serve Him.

(ii.) The home is to exhibit in its perfect beauty the working of the law of love. Love is the duty commended to the husband in particular. Mcn are to love their wives with reverent, tender Mcn regard; with them resides the element of authority. but the rightful exercise of authority is not to be allowed to become a 'root of bitterness' or cause of irritation. And love is to be kept true and pure by habitual recollection both of the entire dependence of the wife on her husband, and of the sacred mystery which wedded love symbolizes the self-sacrificing love of Christ for the Church (Eph 525). The mutual love of those who are brothers by birth (φιλαδελφία) is a type and earnest of that larger love of those who are brethren in the family of Christ, the family in the strict sense being an image of the Divine Kingdom, or, as it has been described, 'a State and a Church in little,' in which the binding and inspiring power of

affection may be first realized.

(iii.) St. Paul and St. Peter alike lay stress on the law of dutifulness. While the gospel recognizes woman's spiritual equality with man, it also guards the rightful responsibility and leadership of the man; on the other hand, nothing is said to favour the assertion of leadership on the part of the husband. On the children is impressed the duty of obedience; nothing is said to them of possible pretexts for resisting parental authority; on the other hand, the parent is warned against the misuse of anthority over either children or servants (Eph 64.9). Finally, servants are exhorted to show diligence and faithfulness; nothing is said to them of 'rights' or 'liberties' or of the 'indignity' of a dependent position. The master, for his part, is urged to keep alive in himself the sense of responsibility towards those who are his equals in the sight of the heavenly King and Judge (Eph 69; see Moule, Ephesian Studies, ch. xi.).

(iv.) Another principle implied, though not ex-

(iv.) Another principle implied, though not expressly indicated, in the NT treatment of the Christian home is the law of social service. Home love is in germ the love which is to fulfil its obligations in every relationship of life. It ineludes

'Loves filial, loves fraternal, neighbour loves And civic.'

The bome, in fact, lays the foundations of social morality in the wider sense. It is a school of humanity and Christ-like service. It has to be guarded from narrowness and exclusiveness by free intercourse with others, and especially by the fulfilment of the duties of hospitality—a virtue on which great stress is laid in the NT (cf. Ro 12<sup>13</sup> 16<sup>1</sup>, 1 P 4° He 6<sup>10</sup> 13<sup>2</sup>, 3 Jn <sup>52</sup>). In the earliest period of the Church's life, circumstances made this duty very urgent. It was the most direct and useful way in which members of the Christian brotherhood could aid the advance of the gospel (Harnack, Expansion of Christianity, i. 219). It is implied also in certain sayings of St. Paul that social intercourse is a duty and may minister to mutual edification (Eph 4°). Family life is, in short, intended to be a school of brotherly love in its widest sense, not developing a mere egoisme à

plusicurs, but training men in large-hearted sympathy and wide social affection.

The closer and warmer the home affection, the larger and stronger should become those social instincts which make life inconceivable except in a community; . . . And if they stop short at the domestic limits, and refuse to open out to their wider office, they sin against the home as much as against the State (H. S. Holland, in Lombard Street in Lent, London, 1894, p. 134 f.; see also J. S. Mackenzie, Introd. to Social Philosophy, Glasgow, 1890, p. 315 ff.).

Home life, in a word, fails of its divinely ordained purpose, if it does not educate and fortify the spirit of social service, if it does not awaken compassion, and deepen insight into the social needs

of mankind.

In this article we have been concerned with the ideals presented by the NT. But it should not be forgotten that, while the home is an institution which has been evolved by the needs of the race—an institution to which the Christian spirit has added new grace, lustre, and stability—modern conditions have brought us to what may be a period of re-construction, when it will be the task of Christianity to define anew the essential principles of 'family ethies.' Industrial conditions, new phases of religious thought, the movement for the higher education of women and their free admission to independent professions and occupations—these and such-like changes have materially affected the normal features of home life. 'Our democracy is making inroads upon the family, and a claim is being advanced which in a certain sense is larger than the family claim' (J. Addams, Democracy and Social Ethics, London, 1902, p. 77).

The position of boys and girls earning an independence at a comparatively carly age, the modern revolt against domestic service, the new ideals of social usefulness which have been inspired by a wider outlook and an improved education-these things have raised personal problems in family life, the solution of which depends upon submission to the progressive guidance of the Christian spirit. It must suffice to indicate the circumstances which, apart from the conditions which directly tend towards the decay of home life, render the fulfilment of home duty a less easy task than it was in the first age of Christianity (on this subject the work by J. Addams quoted above is interesting and suggestive). It remains true that the first of Christian social duties is 'to show piety at home' (1 Ti 54), and that home must always continue to be the school of those graces and virtues which men need for effectual service, whether in the State or in the Church.

LITERATURE.—Besides the various books mentioned in the body of the article, see the works of Harless, Dorner, Martensen, and Newman Smyth on Christian Ethics; C. Gore, The Epistle to the Ephesians: a Practical Exposition, London, 1898, pp. 211-236; HDB, art. 'Family,' I. 846.

R. L. OTTLEY.

HOMER.—The religion and ethics of Homer—whether they belong to an actual evanescent 'Achæan' period in the history of Greece, or are the result of a combination of older and newer elements effected as part of a general process of evolution and harmonization extending over many centuries—have at least a superficial aspect of consistency. This is, no donbt, partly due to the peculiar quality of Homeric art, its unexampled incidity and clearness of outline; to the Homeric spirit with its hatred of vagueness and mysticism. But this temper and art are themselves so characteristically Hellenic that we cannot look to them for an explanation of the startling divergence between the religion of the Iliad and Odyssey and that of historical Greece. For the beliefs of Homer are as distinctive as they are definite, and are now admitted by every one to be the product of historical causes. What those causes were is becoming every day more and more obviously the real

problem at the heart of the 'Homerie questien.' Till they have been discovered, we must be centent with a statement of the facts really within our knowledge, although it must be admitted that the whole significance of these is altered according as one does, or does not, regard them as representing an actual stage (to which the Homeric poems themselves are our only witnesses) in the development of Greek religious thought.

ment of Greek religious thought.

It will be understood that 'Homer' is used throughout this article as a synonym for the Iliad and Odyssey, without reference to the question of their authorship. The books of the Iliad are quoted according to the capital letters of the Greek alphabet, the books of the Odyssey by the ordinary letters.

I. RELIGION.—I. The gods.—These are, of

course, anthropomorphic, as all Greek gods were or tended to become. They are, indeed, taller and more beautiful, wiser and more powerful, than men, and are exempt from old age and death; but otherwise they are scarcely thought of as physically different. They are said to have 'houses on Olympus,' either as actually dwelling upon the Thessalian mountain-and this is certainly the original meaning of the phrase—or, as in the Odyssey, inhabiting a kind of heaven which has nothing of Olympus but the name (5 42 ft.). They form a somewhat insubordinate family-group under the government of Zeus, Olympian society being organized upon the same loosely patriarchal principles as society among Homeric men. They intervene constantly in human affairs, generally in human form, but sometimes in the semblance of birds. They are the sources of good and ill to men; although it is only some special skill or excellence that is regarded as the gift of a particular god, as skill in archery comes from Apollo (B 827; cf. E 51, 61, † 233). They are, theoretically, omnipotent and omniscient; or, at least, Zous is so. They are subject to human passions and actuated by human motives. All this is quite in accordance with Greek religion in its classical form, although the wealth and vivaeity of detail in which the anthropomorphie aspect of the gods is realized are peculiarly Homerie. What is really most importpeculiarly Homerie. ant and characteristic in the religion of Homer is the clear perception of a fundamental distinction between the luman and the divine. Whatever may have happened in the remote past, as when Ino was made immortal ( $\epsilon$  334 f.), in Homer's world no man is a god or can become a god. poet's special contribution to Greek religion, and, historically considered, it is one of the most important ever made; for the conception of the Divine King was one that died hard in the Egean world (G. Murray, Rise of the Greek Epic, 158 f.).

Andrew Lang makes a distinction between what he calls the ethical religion of Homer and his attitude to mythology (World of Homer, 120). So far as they are religious beings, Homer's gods are very grand and imposing figures, worthy of all respect and reverence. They are usually just, kindly, and placable, although their goodwill is often purchased and their wrath appeased, merely, it scems, by sufficient sacrifice. They are bound by their oaths, which they make by the water of Styx (O 38, \$\epsilon\$ 186). Their relation to Fate (Moira, Aisa) is apparently not consistently stated, no doubt because it has not been clearly thought ont. Sometimes the poet uses the language of fatalism (X 5; cf. Z 487 f.); but, speaking generally, Moira coincides with, or is, the will of the gods, more especially the will of Zeus. It is, in fact, in a quite literal way to begin with, his 'portion' (Ath abra)—the division of the tribe which belongs to him. This conception of Moira invests Zeus with a very real moral grandenr when he subduce his own feelings of love and pity in voluntary obedience to it, as when he allows his son Sarpedon to fall by the hand of Patroklos (II 431 ff.), and is moved by the

tragedy of the war (T21). It is to Zeus that the poor woman at the millstone prays in the palace in Ithaca, when she calls down his thunder upon her oppressors ( $\nu$  115 ff.). He is the protector of suppliants and strangers ( $\eta$  165; cf. 181,  $\iota$  270) and beggars (£ 57). He punishes those who give crooked judgments in the assembly and drive out Dike, the Right Way of things, disregarding the anger of the gods (H 387 ff.), who elsewhere are said to wander disguised over the earth observing the lawlessness and righteousness of men (ρ 485 f.). 'Evil deeds do not prosper' ( $\theta$  329), for 'the blessed gods love not heartless actions' ( $\xi$  83). The helplessness of man, which is so much in the mind of Homer, makes him dependent upon divine aid:

'All men feel the need of gods' (748). Such are the gods of Homer when be thinks of them religiously. Even so, they are apt to be vengeful and capricious, while from another point of view they are decidedly unsympathetic, being lifted so far above human needs and weaknesses. But they do move us to a half-unwilling respect and awe. One can understand the emotion evoked by the great statue of Zeus at Olympia which was inspired by a famous passage in the *Iliad*; for, as Lang has remarked (op. cit. 117), the Olympians of Homer are the Olympians of Pheidias. But, when the poet comes to deal with the gods of mythology, he adopts a very different tone. In his hands they cease to be moral. The charge of Xenophanes, that Homer attributes to the gods all that is accounted a shame and a reproach among mentheft and adultery and deceiving of one another (fr. 11, Diels)—can be literally justified (e.g.  $\tau$  396, the 'Lay of Demodokos' in  $\theta$ , the Deceiving of Zeus in  $\Xi$ ; cf. the 'Battle of the Gods' in  $\Phi$  385 f. -an episode on the verge of burlesque). Yet perhaps the protest of Xenophanes-admirable and tonic at the time it was made—is somewhat beside the mark. Homer is not preaching irreligion; ho is trying to solve a very difficult artistic problem. He could not avoid the mythology of his subject, but the gods as actors in that mythology he could A naive faith can jest at what it holds most sacred, but the religion of which we have quoted some instances was anything rather tban naive. Homer simply took the gods of mythology as be found them, much lower in the moral scale than any of his own heroic men and women, and treated them, as it were, decoratively (see Murray, op. cit. 280f.). The truth is that (see Murray, op. cit. 280f.). The truth is that Homer does not sympathize with, scarcely seems to understand, the old folk-religion of Greece which existed so long before and after him. Its leading divinities, Dionysos and the Mother and Maid, Demeter and Persephone, he barely mentions; the various Mysteries, which were so important a feature in it, he does not mention at all. Neither do we find in Homer any certain reference to the belief in heroes in the technical sense of the term, 'the divine race who are called half-gods,' as Hesiod describes them (Erga, 159), whose in-numerable cults sufficiently prove how ancient and influential their worship was in Greece; for the lines describing the divine honours paid to Erechtheus in Athens occur in the Catalogue of the Ships (B 546 ff.), and even there are perhaps an Athenian interpolation. Herakles, the typical 'hero,' is for Homer 'the man Herakles' ( $\phi$  26).

Certain important aspects of the gods who appear in the *Hiad* and *Odyssey*—and these the aspects which counted for most in the popular faith—are completely ignored. Homer will have nothing to do with the gods of the people, and makes light of the 'sacred stories' of which Greek literature is so full from Hesiod to Pausanias and Plutarch. Indeed, it is obvious that a religion Plutarch. Indeed, it is obvious that a religion like that which we find in the Homeric poems—a

religion of which we are tempted to complain that it makes too much rather than too little of reason and sanity-involves the criticism and ultimate destruction of the simple faith which could accept the myths as a decent account of the life and behaviour of the gods. That this is not due to the personal predilections of a single poet with an eclectic creed follows from the very nature of the Epos. Homer had to deal with the saga or heroic tradition; he had to retell an old tale. The fact that the story involves the prominence of certain gods and heliefs and the exclusion of certain others is ground for concluding that the former must have been prominent and the latter absent at all periods in the life of the saga. Without Zeus and Apollo, for instance, there could be no *Riad*; without Poseidon and Athena, no *Odysscy*. These, then, were in the saga from the beginning; that is to say, they were gods of the people whose beliefs were enshrined in it. If we apply this criterion to the Homeric poems, it leads to important historical conclusions. For it seems reasonable to hold that the divinities whose action is most vital in the organic structure of the poems were the 'Achæan' gods, while those whom Homer dislikes or disregards were non-Achæan. This conclusion is strengthened by a good deal of evidence from the history of Greek religion. We know now the the history of Greek religion. We know now the general spirit and character of the old Cretan and Mycenean religions—the worship of the Bull-god, the prevalent cult of the Earth-goddess, the care-ful tendance of the dead; and it is certain that, at a date which can only be conjecturally fixed, the ancient faith was overlaid and, for a time, evidently eclipsed by the worship of certain deitics clearly of Northern origin, especially the Father-god Zeus. That this worship was introduced by the tribes wbo, in the times of the Migrations, pushed down from the North into Greece is the obvious and accepted hypothesis. The Homeric poems elearly reflect a period of Northern ('Achæan') predominance, which implies and includes the predominance of the Northern religion over the native 'Ægean' worship of ghosts and goddesses. That the divini-ties of the Homeric pantheon are all gods of the invaders is not true; there has demonstrably been some fusion with, and affiliation to, certain divinities of the native peoples. But Homer does preserve more clearly than anything else in Greek literature the memory of a religion more distinctly Northern in character than that of pro-Homeric or classical Greece, and with an observable bias in it against the indigenous agricultural and chthonian cults. This is the historical basis of his 'Olympianism,' the root from which it has grown, although we must not assume that the flower represents the creed of any actual age or people. It grew ont of popular religion, but, as it people. It grew out or popular religion, but, as it appears full-blown in our *Hiad* and *Odysscy*, it is not itself popular religion. It is too selective for that, too systematic. 'It was Homer and Hesiod,' says Herodotus, 'who composed a "theogony" for the Greeks, and who first gave the gods distinctive titles, and defined their forms and functions' (ii. titles, and defined their forms and functions' (ii. 53). (For a description of the process by which the Olympian ideal was evolved by gradual differentiation from popular notions of divinity, see J. E. Harrison, Themis, ch. x. p. 445 ff.)

Of the Homeric gods, the most prominent in the Riad are (besides Zens) Apollo, Poseidon, and Ares; Hera, Athena, and Aphrodite; in the Odysscy (besides Zens), Athena, Poseidon, Helios, and Hormes

(1) Zous is the supreme god, the 'father of gods and men' (A 544), and, among men, in a special sense of kings, who often have the epithet Zeusborn. He is clearly the deity of a people with patriarchal institutions, and exercises a kind of

patria potestas among the other Olympians. anthority is effective, although not unchallenged, especially by Hera, his wife, the ancient goddess of Argos, whose rebellionsness towards him may possibly reflect some earlier conflict between their worshippers. Whether Zeus was a specifically Achean god from the first is not at all certain. There is evidence which indicates that he was worshipped at Dodona long before the coming of Achans there. But it is certain that he became the chief god of the people whom Homer ealls Achans, and his characteristies in Homer are nearly all 'Northern.' Nor is his earliest home in the far north-west forgotten, for Achilles prays to him as 'Zeus the Lord, God of Dodona, Pelasgian' (II 233). But normally he dwells upon Monnt Olympus; he is, indeed, pre-eminently 'the Olympian' (A 508, 583, 589). This also without doubt has its historical justification, taking us back to a time when his worshippers dwelt in North Thessaly, as tradition always maintained. Originally, then, 'the Olympian' meant 'he was dwells on Olympus' in Thessaly, although, as many mountains in Greece were named Olympus, and at least one famous seat of Zeus-worship was called Olympia, the epithet 'Olympian' gradually extended its connotation. Homer, indeed, speaks of the gods generally as 'the Olympians.' What is certain is that Zeus dwells by preference on the summit of a mountain (e.g.  $\Theta$  3). He watches the fortnnes of the war from Gargaros, a peak of Mount Ida in the Troad, where he has a precinct and fortnnes of the war from Gargaros, a peak of Mount Ida in the Troad, where he has a precinct and altar (0 47 f.; cf. X 171,  $\Gamma$  276,  $\Omega$  308). This explains why Zeus seems all through the *Riad* to favour the Trojans. He is the god of both sides, and the god of Ida is opposed to the god of Olympns (Murray, op. cit. 90). He is said to dwell in the upper air (B 412). This is natural in a divinity who is primarily a Sky-god, lord of the elements, above all of the thunderstorm, from elements, above all of the thunderstorm, from which he derives many epithets (τερπικέραυνος, έρλγ-δουπος, etc.; cf. A 580, II 298). He is armed with the thunderbolt and the ægis, and is himself a great war-god (ταμίης πολέμοιο, Δ 84). The Homeric Zeus is, in fact, an excellent illustration of the way in which certain primitive traits of a divinity may persist side by side with others which obviously belong to a totally different stage of religious thought. He never loses his original character of a Sky- and Thunder-god, but he is gradually moralized into the Zeus of certain great passages already quoted. (2) The same process has been at work in the

case of Apollo; but it has gone much further, and eliminated almost every trace of his original nature. The probability is that he was, to begin with, a Sun-god; but no one could infer that from Homer. He appears in the *Riad* as a great warrior, strong upon the side of the Trojans and Lycians. Apollo, as his cults testify and Homer well knows (A 37 f.), was the great divinity of the Trond; and his favour towards the Lycians would also be explained if we could accept as proved Wilamowitz's hypothesis of his Lycian origin, and translate his epithet λυκηγενής (\$\text{\Delta}\$ 101) by 'Lycian-born.' Outside Troy and the Troad, 'rocky Pytho' is already sacred to him (\$\text{I}\$ 405), and he has a consecrated grove at Ismaros in Thrace (1200) and in Ithaca (1278). But it is strange to find that one of the greatest of Greek gods in the estimation of Homer himself has so little connexion in the Epos with Greece proper. He is armed with the bow (A 45 f.)—an archaic touch. Hence his commonest epithet is 'the Far-Darter' (ἐκηβόλος, etc., A 14, 75, 385, 479, etc.). References to other aspects afterwards prominent in the Apolline religion are neither numerous nor important. But the ideal figure of Apollo in in the Apolline religion are neither numerous nor important. But the ideal figure of Apollo in Homer, rising at times to sublimity, exercised an (5) Ares and Aphrodite are associated in both the Riad (E 359 ff., \$\Phi 416\$) and the Odyssey (\$\theta 266 f.\$). They are treated unsympathetically by Homer,

incalculable infinence upon Greek art, and, through Greek art, upon modern notions of what is implied in Hellenism.

(3) Conjoined with Zous and Apollo in the recurring formula of appeal to the gods (B 371, A 288, etc.) is Athena (Aθηνη). The association is evidently significant, for it reappears in Athenian religion (see Harrison, Themis, 501 f.). Of all the gods, these are the three most highly honoured, Zeus, of course, in the highest degree (cf. 6 540). Athena is his daughter and favourite child, although reference is nowhere made to the legend of her birth from his head—not the kind of story likely to appeal to Homer. She earries the egis, like her father the Thunder-god (B 447, E 738); and the explanation of this scems to be found in her development, as Pallas, from the palladion (two round shields placed so as to touch at the rim and form the figure 8), which was regarded as a 'thunder-shield.' Hence she is a great wargoddess—indeed, the chief Achæan divinity of war, and more than a match for Ares. Her other name, 'Athene,' connects her with Attiea. Whether Homer thought of her as a specially Athenian goddess is not clear from the poems themselves, although the epithet 'Athenaië' is evidence enough of her historical association with Athens. Another of her historical association with Athens. Another of her epithets, 'Glaukōpis,' points in the same direction; for, although in Homer it evidently means no more than 'grey-eyed' or 'bright-eyed,' it must be derived from γλαῦξ, and the owl, as every one remembers, was the sacred bird of the Athenian goddess. So with the title 'Boöpis' applied to Hera, the ancient Cow-goddess of Argos (A 551). But these traces of primitive religion are But these traces of primitive religion are (A 551). not consciously realized, or are deliberately suppressed, in Homer, who imagines Athena in the form of a woman 'fair and tall and skilled in gleaming crafts' (v 289)—wise, also, and mighty in war. It is the Athena of Pheidias.

(4) The same idealizing tendency has been at work upon Poseidon; and it has been remarked that Apollo, Athena, and Poseidon, who are never made to appear mean or ridiculous like most of the other Olympians on occasion, were the chief deities of the Ionian race. Whatever inference may be drawn from that, the Poscidon of Homer is certainly an impressive creation, with something about him of the turbulence and splendour of the sea. For it is as god of the sea that he is consistently presented in both the *Iliad* and the *Odyssey*; although the Riad seems not unaware of his function as the god of horses ( $\Psi$  307, 584). The epithet tion as the god of horses ( $\Psi$  307, 584). The epithet 'Earth-shaker' ( $\ell$ rroolyaus,  $\ell$ rool $\chi\theta$ wr) does not help us, for it is at least as applicable to his power of making earthquakes as to his shaking the land with his waves; while the title γαιήοχοι is of uncertain meaning. For the most part Poseidon is a vehement partisan of the Aehæans. But he is wroth with them for building a wall that is like to eelipse the glory of that built for Troy by Apollo and himself when they toiled for Laomedon (H 448 ff.); and Zeus gives him permission to destroy the Greek fortifications after the war. To this there is doubtless some background of fact, and we become sure of it when the god resenes Æneas from Achilles, that the descendants of the Trojan hero may reign in Troyland (T 302 ff.). The persecution of Odysseus by Poseidon finds its postical mative in the blinding of Polyndames the poetical motive in the blinding of Polyphemos, the uneouth son of the god. But it, too, perhaps rests on some ground of actuality, since the injunctions of Teiresias seem to point to the foundation of some known cult of Poseidon among a people ignorant of the sea ( $\lambda$  121 f.).

especially Ares. The explanation seems to be that both are 'Thracian' divinities, and the Homeric Thracians are enemies of the Acheans. Ares at least is a Thracian in Homer (N 301, \$\theta 361\); while there is ground for thinking that Aphrodite was originally his wife; although in the fablian-like Lay of Demodokos she is represented as the wife of Hephaistos. On the other hand, the wife of Hephaistos in the Iliad is Charis hand, the wife of Hephiaistos in the Itaa is Charis ( $\Sigma$  382). Aphrodite is called the daughter of Zens and Dione (E 348, 370). She is named the 'Cyprian' (E 330, etc.), and has a sanctuary at Paphos ( $\theta$  363). This recalls her undoubted kinship with the Oriental Love-goddess whom the Greeks called Astarte (g.v.); for Cyprus early received a large Semitic element in its population. She is also named the 'Cytherean' ( $\theta$  288,  $\sigma$  193). She intervenes to says her son Energy from the large. She intervenes to save her son Æneas from the lance of Diomedes (E 311 ff.)—a reminiscence, perhaps, in the tradition of her original nature as a wargoddess. Homer, however, regards her as simply the goddess of Love, peculiarly unfitted, in fact, for the strife of battle (E 429). She serves for the standard of beauty, the 'golden' Aphrodite, and is already essentially the type embodied in the statue of Praxiteles. Ares, on the other hand, typifies the rage of battle, the war-spirit as a mere explosion of animal ferocity; while Athena represents the same spirit controlled and directed by reason

(6) Hermes and Iris are messengers of the gods, more strictly perhaps of Zcus. Hermes provides us with a vivid illustration of the contrast between Homeric and popular Greek religion. There is a whole world of difference between the ithyphallio idol worshipped by the Arcadians and Athenians and the god of Homer 'like a young man in the most gracious season of youth' (\$278). There is, however, one aspect of the Homeric god which accords with the popular conception of him, namely that in which he is *Psychopompos*, Conductor of the Dead to the under world; for in the cults Hermes has important chthonian functions (w ad init.; the passage, however, is late). His magic golden wand (e 47) belongs to him in this capacity. The epithets he bears (ξριούνιος, ἀκάκητα, διάκτορος, ἀργεϊφόντης) are all nnexplained. It is one of the distinctions between the High and the of the distinctions between the Riad and the Odyssey that in the former it is Iris who is normally the messenger of Zeus, while in the latter it is Hermes.

(7) Of the Olympians, Hephaistos is most definitely connected with a special locality—Lemnos (A 593,  $\theta$  283 f.). As Fire-god he appears sometimes to be almost identified with the element he controls (e.g.  $\oplus$  342 ff.). His skill as a craftsman is much celebrated (A 608,  $\Theta$  195, etc., esp.  $\Sigma$  478 ff.); but for the most part he is treated in a vein of

good-natured comedy.
(8) Helios ( $\mu$  376 ff.) is even more elemental in his nature, being simply the personified Sun, one of the ancient Nature gods dwelling in the background of Homeric religion. To this background also belong not only Dionysos and Demeter with certain minor divinities such as Aiolos, Kirke, Protens, Leukothea, but the great company of nymphs, river-gods, and the like, who have in all ages been very real to the imagination of the Greek people (see J. C. Lawson, Modern Greek Folklore, etc., Cambridge, 1910, p. 130 ff.). The essential nature of Dionysos and Demeter as spirits of the changing seasons prevented their becoming Olympians, for these do not suffer age or death, whereas the central fact in the ritual of Dionysos and Demeter was a drama of the death and re-birth

2. The world of the dead .- The Homeric conception of the soul and its destiny differs as much

from that which seems to have been at all times current in Greece as his Olympians differ from the gods of the people. Yet it is a logical accompaniment, either as cause or effect, of the Homeric practice of cremation, and it can be paralleled from history. In Homer the dead man is liabitually burned, and a mound heaped over his ashes. Only in this way can his soul  $(\psi \nu \chi \eta)$  be set free to enter the realm of Hades, from which the ghost of the unburned and unburied is excluded by the dead already there ( $\Psi$  71 f.). It is impossible for a race which burns its dead, consuming flesh and sinews ( $\lambda$  219) until only the charred bones are left, to have the materialistic conception of the soul natural to a primitive people accustomed to bnry its dead entire. So Homer imagines the soul as little more than a vapour exhaling from the pyre, and thereafter leading an apathetic life in the under world. a mere shadow (oxid) now. The essential thing about the Homeric ghost is its futility. It is the sense of this, and not any positive suffering, that calls forth the lament of Achilles, that it is better to be a poor labouring man on earth than king over all the dead ( $\lambda$  488 ff.). Life has lost colour and intensity for the dead, and their existence is a mere reflexion or parody of their earthly lives. This is most clearly brought out in the latter part of the eleventh book of the Odyssey (568 ft.)—a passage which is believed to show the influence of Orphic ideas, and at any rate contains other ideas than the rest of the Nekyia Here we find Minos dealing jndgments among the dead as he judged his people once in Knossos, and the pliantasm of Herakles with his bow as in life, and Orion hunting the wild creatures as he hunted them on earth. This conception of the life after death was perhaps the normal Greek onc (cf. Pind. fr. 129), and does not seem inconsistent with the Homeric doctrine of the soul. But in the 'Orphic interpolation' we also find certain great criminals—Tityos, Tantalos, Sisyphos—evidently being punished for their sins. There is probably some misunderstanding here of the original meaning of the myths of Sisyphos and the rest; and there is no mention elsewhere in the Nckyia of a separate abode or destiny for the good and the wicked; there is no Heaven and no Hell.

765

Archeologists have found no evidence of any period in historic or pre-historic Greece when inhumation was not the usual mode of disposing of the dead. We can only infer that, while crema-tion may have been universal among the Achæans when they entered the Hellonic lands, they quickly learned to bury their dead from the earlier inhabitants, who certainly buried theirs. The Homeric doctrine of the soul, which we may assume to have been the Achæan doctrine, since it goes with cremation, likewise speedily disappeared before the native belief in the effective powers of dead men. And, in fact, the language of Homer is not perfectly consistent (see Rohde, Psyche, i. 1-67). Odyssens digs a trench and pours into it the blood of a black ram sacrificed to Teiresias (λ 23 ff.; cf. Paus. ix. 39. 6). The shade of the prophet drinks of the blood before he speaks. This feeding of the dead was a ritual cat postdead was a ritual act performed by the Greeks throughout antiquity. But it has no meaning unless the dead man is there to be fed, that is, unless he is buried and not burned; for the feeding was literal enough, the blood being sometimes conreyed to the corpse through a hole in the tomb. As a matter of fact, Teiresias had a pre-historic tomb in Bœotia, where he was regarded as a prophet still capable of delivering his oracles. The sacrifice, which was properly offered at this tomb, is made in Homer to his shade at the limits of the earth. Again, the descriptions of finerals sometimes surprise us by details which look like survi-

patria potestas among the other Olympians. His authority is effective, although not unchallenged, especially hy Hcra, his wife, the ancient goddess of Argos, whose rebellionsness towards him may possibly reflect some earlier conflict between their worshippers. Whether Zeus was a specifically Achæan god from the first is not at all certain. There is evidence which indicates that he was worshipped at Dodona long before the coming of Acharans there. But it is certain that he became the chief god of the people whom Homer calls Achaens, and his characteristics in Homer are nearly all 'Northern.' Nor is his earliest home in the far north-west forgotten, for Achilles prays to him as 'Zens the Lord, God of Dodona, Pelasgian' (II 233). But normally he dwells npon Monnt Olympus; he is, indeed, pre-eminently the Olympian (A 508, 583, 589). This also without Olympian' (A 508, 583, 589). Anis also without doubt has its historical justification, taking us back to a time when his worshippers dwelt in North Thessaly, as tradition always maintained. Originally, then, 'the Olympian' meant 'he who dwells on Olympus' in Thessaly, although, as many mountains in Greece were named Olympus, and at least one famons seat of Zeus-worship was called Olympia the anithet 'Olympian' gradually called Olympia, the epithet 'Olympian' gradually extended its connotation. Homer, indeed, speaks of the gods generally as 'the Olympians.' What is certain is that Zeus dwells by preference on the summit of a mountain (e.g.  $\Theta$  3). He watches the fortunes of the war from Gargaros, a peak of Mount Ida in the Troad, where he has a precinct and altar ( $\Theta$  47 f.; cf. X 171,  $\Gamma$  276,  $\Omega$  308). This explains why Zeus seems all through the *Riad* to favour the Trojans. He is the god of both sides, and the god of Ida is opposed to the god of Olympus (Murray, op. cit. 90). He is said to dwell in the upper air (B 412). This is natural in a divinity who is primarily a Sky-god, lord of the elements, above all of the thunderstorm, from which he derives many epithets (τερπικέραυνος, έρίγ-δουπος, etc.; ef. A 580, II 298). He is armed with the thunderbolt and the ægis, and is himself a great war-god (ταμίης πολέμοιο, Δ 84). The Homeric Zeus is, in fact, an excellent illustration of the way in which certain primitive traits of a divinity may persist side by side with others which obviously belong to a totally different stage of religious thought. He never loses his original character of a Sky- and Thunder-god, hut he is gradually moralized into the Zeus of certain great passages already quoted.

(2) The same process has been at work in the case of Apollo; but it has gone much further, and eliminated almost every trace of his original nature. The probability is that he was, to begin with, a Sun-god; but no one could infer that from Homer. He appears in the Riad as a great warrior, strong upon the side of the Trojans and Lycians. Apollo, as his cults testify and Homer well knows (A 37 f.), was the great divinity of the Troad; and his favour towards the Lycians would also he explained if we could accept as proved Wilamowitz's hypothesis of his Lycian origin, and translate his epithet λυκηγενής (Δ 101) by 'Lycian-born.' Ontside Troy and the Troad, 'rocky Pytho' is already sacred to him (I 405), and he has a consecrated grove at Ismaros in Thrace (1200) and in Ithaca (1278). But it is strange to find that one of the greatest of Greek gods in the estimation of Homer himself has so little connexion in the Epos with Greece proper. He is armed with the bow (A 45f.)—an archaio toneh. Hence his commonest epithet is 'the Far-Darter' (ἐκηβόλος, etc., A 14, 75, 385, 479, etc.). References to other aspects afterwards prominent in the Apolline religion are neither numerous nor important. But the ideal figure of Apollo in Homer, rising at times to sublimity, exercised an

incalculable influence upon Greek art, and, through Greek art, upon modern notions of what is implied in Hellenism.

(3) Conjoined with Zeus and Apollo in the recurring formula of appeal to the gods (B 371,  $\Delta$  288, etc.) is Athena ( $A\theta\eta\nu\eta$ ). The association is evidently significant, for it reappears in Athenian religion (see Harrison, Themis, 501 f.). Of all the gods, these are the three most highly honoured, Zeus, of course, in the highest degree (cf. 6 540). Athena is his daughter and favourite child, although reference is nowhere made to the legend of her birth from his head—not the kind of story likely to appeal to Homer. She carries the ægis, like her father the Thunder-god (B 447, E 738); and the explanation of this seems to be found in her development, as Pallas, from the palladion (two round shields placed so as to touch at the rim and form the figure 8), which was regarded as a 'thunder-shield.' Hence she is a great war-Hence she is a great wargoddess-indeed, the chief Achean divinity of war, and more than a match for Ares. Her other name, 'Athene,' connects her with Attien. Whether Homer thought of her as a specially Athenian goddess is not clear from the poems themselves, although the epithet 'Athenaië,' is evidence enough of her historical association with Athens. Another of her epithets, 'Glaukōpis,' points in the same direction; for, although in Homer it evidently means no more than 'grey-eyed' or 'bright-eyed,' it must be derived from γλαῦξ, and the owl, as every one remembers, was the sacred bird of the Athenian goddess. So with the title 'Boōpis' applied to Hera, the ancient Cow-goddess of Argos (A 551). But these traces of primitive religion are not consciously realized, or are deliberately supnot consciously realized, or are deliberately suppressed, in Homer, who imagines Athena in the form of a woman 'fair and tall and skilled in

gleaming erafts' ( $\nu$  289)—wise, also, and mighty in war. It is the Athena of Pheidias.

(4) The same idealizing tendency has been at work npon *Poscidon*; and it has been remarked that Athena and Bossidon who are never that Apollo, Athena, and Poseidon, who are never made to appear mean or ridiculous like most of the other Olympians on occasion, were the chief deities of the Ionian race. Whatever inference may be drawn from that, the Poseidon of Homer is certainly an impressive creation, with something about him of the turbulence and splendour of the sea. For it is as god of the sea that he is consistently presented in both the *Iliad* and the *Odyssey*; although the *Riad* seems not nnaware of his function as the god of horses (¥ 307, 584). The epithet tion as the god of horses (¥ 307, 584). The epithet Earth-shaker' (ἐννοσίγαιος, ἐνοσίχθων) does not help us, for it is at least as applicable to his power of making earthquakes as to his shaking the land with his waves; while the title yautoxos is of nncertain meaning. For the most part Poseidon is a vehement partisan of the Achæans. But he is wroth with them for building a wall that is like to eclipse the glory of that built for Troy by Apollo and himself when they toiled for Laomedon (H 448 ft.); and Zens gives him permission to destroy the Greek fortifications after the war. To this there is doubtless some background of fact, and we become sure of it when the god rescues Eneas from Achilles, that the descendants of the Trojan hero may reign in Troyland (7 302 ff.). The persecution of Odyssens by Poscidon finds its poetical motive in the blinding of Polyphemos, the uncouth son of the god. But it, too, perhaps rests on some ground of actuality, since the injunctions of Teiresias seem to point to the foundation of some known cult of Poseidon among a people ignorant of the sea ( $\lambda$  121 f.).

(5) Ares and Aphrodite are associated in both the Riad (E 359 ff., \$\phi 416\$) and the Odyssey (\$\text{0}200 f.\$). They are treated unsympathetically by Homer,

especially Arcs. The explanation seems to be that both are 'Thracian' divinities, and the Homeric Thracians are enemies of the Achæans. Ares at least is a Thracian in Homer (N 301,  $\theta$  361); while there is ground for thinking that Aphrodite was originally his wife; although in the fabliau-like Lay of Demodokos she is represented as the wife of Hephaistos. On the other hand, the wife of Hephaistos in the Iliad is Charis ( $\Sigma$  382). Aphrodite is called the daughter of Zeus and Dione (E 348, 370). She is named the 'Cyprian' (E 330, etc.), and has a sanctuary at Paphos ( $\theta$  363). This recalls her undoubted kinship with the Oriental Love-goddess whom the Greeks called Astarte (q.v.); for Cyprus early received a large Semitic element in its population. She is also named the 'Cytherean' ( $\theta$  288,  $\sigma$  193). She intervenes to save her son Æneas from the lance of Diomedes (E 311 ff.)—a reminiscence, perhaps, in the tradition of her original nature as a wargoddess. Homer, however, regards her as simply the goddess of Love, peculiarly unfitted, in fact, for the strife of battle (E 429). She serves for the standard of beauty, the 'golden' Aphrodite, and is already essentially the type embodied in the statue of Praxiteles. Ares, on the other hand, typifies the rage of battle, the war-spirit as a mere explosion of animal ferocity; while Athena represents the same spirit controlled and directed by

(6) Hermes and Iris are messengers of the gods, more strictly perhaps of Zens. Hermes provides ns with a vivid illustration of the contrast between Homeric and popular Greek religion. There is a whole world of difference between the ithyphallic idol worshipped by the Arcadians and Athenians and the god of Homer 'like a young man in the most gracious season of youth' (κ 278). There is, however, one aspect of the Homeric god which accords with the popular conception of him, namely that in which he is Psychopompos, Conductor of the Dead to the under world; for in the cults Hermes has important chthonian functions (ω ad init.; the passage, however, is late). His magic golden wand (ε 47) belongs to him in this capacity. The epithets he bears (εριούνιος, ἀκάκητα, διάκτορος, ἀργεϊφόντης) are all unexplained. It is one of the distinctions between the Riad and the Odyssey that in the former it is Iris who is normally the messenger of Zeus, while in the latter it is Hermes.

(7) Of the Olympians, Hephaistos is most definitely connected with a special locality—Lemnos (A 593,  $\theta$  283 f.). As Fire-god he appears sometimes to be almost identified with the element he controls (e.g.  $\phi$  342 ff.). His skill as a craftsman is much celebrated (A 608,  $\theta$  195, etc., esp.  $\Sigma$  478 ff.); but for the most part he is treated in a vein of

good-natured comedy.

(8) Helios (μ 376 ff.) is even more elemental in his nature, being simply the personified Sun, one of the ancient Nature-gods dwelling in the background of Homeric religion. To this background also belong not only Dionysos and Demeter with certain minor divinities such as Aiolos, Kirke, Proteus, Leukothea, but the great company of nymphs, river-gods, and the like, who have in all ages been very real to the imagination of the Greek people (see J. C. Lawson, Modern Greek Folklore, etc., Cambridge, 1910, p. 130 ff.). The essential nature of Dionysos and Demeter as spirits of the changing seasons prevented their becoming Olympians, for these do not suffer age or death, whereas the central fact in the ritual of Dionysos and Demeter was a drama of the death and re-birth of the god.

2. The world of the dead.—The Homerio conception of the soul and its destiny differs as much

from that which seems to have been at all times current in Greece as his Olympians differ from the gods of the people. Yet it is a logical accompaniment, either as cause or effect, of the Homeric practice of cremation, and it can be paralleled from history. In Homer the dead man is habitually burned, and a mound heaped over his ashes. Only in this way can his soul  $(\psi \nu \chi \eta)$  be set free to enter the realm of Hades, from which the ghost of the unburned and unburied is excluded by the dead already there (4 71 f.). It is impossible for a race which burns its dead, consuming flesh and sinews ( $\lambda$  219) until only the charred bones are left, to have the materialistic conception of the soul natural to a primitive people accustomed to bnry its dead entire. So Homer imagines the soul as little more than a vapour exhaling from the pyre, and thereafter leading an apathetic life in the under world, a mere shadow (oxid) now. essential thing about the Homeric ghost is its futility. It is the sense of this, and not any positive suffering, that calls forth the lament of Achilles, that it is better to be a poor labouring man on earth than king over all the dead ( $\lambda$  488 ff.). Life has lost colour and intensity for the dead, and their existence is a mere reflexion or parody of their earthly lives. This is most clearly brought out in the latter part of the eleventh book of the Odyssey (568 ff.)—a passage which is believed to show the influence of Orphic ideas, and at any rate contains other ideas than the rest of the Nekyia Here we find Minos dealing indements among the dead as he judged his people once in Knossos, and the phantasm of Herakles with his bow as in life, and Orion hunting the wild creatures as he hunted them on earth. This conception of the life after death was perhaps the normal Greek onc (cf. Pind. fr. 129), and does not seem inconsistent with the Homeric doctrine of the soul. But in the 'Orphic interpolation' we also find certain great criminals—Tityos, Tantalos, Sisyphos—evidently being punished for their sins. There is probably some misunderstanding here of the original meaning of the myths of Sisyphos and the rest; and there is no mention elsewhere in the Nekyia of a separate abode or destiny for the good and tho wicked; there is no Heaven and no Hell.

Archæologists have found no evidence of any period in historic or pre-historio Greece when in-humation was not the usual mode of disposing of the dead. We can only infer that, while cremation may have been universal among the Achæans when they entered the Hellenio lands, they quickly learned to bury their dead from the earlier inhabitants, who certainly buried theirs. The Homeric doctrine of the soul, which we may assume to have been the Achæan doctrine, since it goes with cremation, likewise speedily disappeared before the native belief in the effective powers of dead men. And, in fact, the language of Homer is not perfectly consistent (see Rohde, *Psyche*, i. 1-67). Odysseus digs a trench and pours into it the blood of a black ram sacrificed to Teiresias (λ 23 ff.; cf. Paus. ix. 39. 6). The shade of the prophet drinks of the blood before he speaks. This feeding of the dead was a ritual act performed by the Greeks throughout antiquity. But it has no meaning unless the dead man is there to be fed, that is, unless he is buried and not burned; for the feeding was literal enough, the blood being sometimes conveyed to the corpse through a hole in the tomb. As a matter of fact, Teiresias had a pre-historic tomb in Bœotin, where he was regarded as a pro-phet still capable of delivering his oracles. The sacrifice, which was properly offered at this tomb, is made in Homer to his shade at the limits of the earth. Again, the descriptions of funerals sometimes surprise us by details which look like survi-

weight to be assigned to these indications is not easy to judge. They may qualify a little, but they do not alter, the fact that in Homer the dead are always burned, and that their souls exist in separation from their bodies in a world reached at the verge of Oceanus in the extreme West; whereas the normal Greek practice was to inhume the dead, and the normal Greek belief was that the sonl after death somehow maintained its connexion with the body, and that the realm of Hades was nnder the earth—as at least one passage in the Riad implies (T 61)—to be reached by certain known caverns or clefts in the ground. The contradiction is radical. Ghost-worship, hero-worship -the whole of that chthonian religion which meant so much to the Greeks of history-are steadily ignored in Homer; Hades and Persephone are mere names.

3. Ritnal and priests.—The gods are approached by men with prayer and burnt-offering. The two things naturally go together; and, when prayer is made to a god without sacrifice, it usually contains a reminder of sacrifices offered on previous occasions (cf. A 40). That is because the attitude of the worshipper is not unfairly expressed as do ut des. For the same reason a prayer usually includes a vow to make an offering to the god, if the request be granted. Doubtless there is in Homer some lingering feeling that the sacrifice is more than a mere business transaction, that the god of one's own tribe will be more disposed to accept it than an alien deity, perhaps even that the relation thus established between worshipped and worshipper has a certain mystical force. But he does not think of sacrifice as a sacrament. The ritual is think of sacrifice as a sacrament. The ritual is elaborately described for us, most fully in the third book of the *Odyssey*, when Nestor sacrifices an ox or cow to Athena (431 ff.). The victim had to be appropriate, as a bull to Poseidon ( $\Lambda$  728,  $\gamma$  6), a white male lamb to Helios ( $\Gamma$  103), and so on. The victim was expected to be unblemished, and the sacrificars must be corresponded. and the sacrificers must be ceremonially clean. Sacrifice offered in confirmation of an oath is exceptional in admitting a mimetic or at least symbolical element: 'whichever side breaks the oath first, may their brains be spilt on the ground like this winc!' (I 300); and the flesh of the victim was not caten (310). Since we have to do in Homer with burnt sacrifice to the heavenly gods, the altars he speaks of are the high bomoi. The low eschara, which served as altar in hero-worship, means in the Homeric poems simply a hearth (n 153). Temples are rarely mentioned, and then in passages whose evidential value is questioned (see Cauer, *Grundfragen*<sup>2</sup>, Leipzig, 1909, p. 297 f.). There are certainly many reminiscences of a time when temples did not as yet exist, and the altar of the god stood in the open air, in a grove or sacred enclosure (τέμενος), or by running water (B 305, 506, I 404, ζ 291, ctc.). Only one statue is mentioned—that of Athena in her temple at Troy, which must have represented the goddess as seated (cf. Z 303), although the earliest images of the gods were standing. As to pricets, they are always attached to some special sacred place and the service of some special divinity. There is no priestly caste in Homer any more than in historical Greece. Sometimes we meet with a priest of a very primitive type, like Maron who dwelt in the grove of Apollo (1200), like Chryses, who is called an apprip, or enrsing-man (A 11), like the Selloi at Dodona, who had unwashen feet and slept on the ground (II 235). These last were perhaps prophets rather than priests; and prophets, as we must expect in so becoming guilty of 'Hybris,' which is the violative every saga, play a considerable part in both the tion of Aidos and the object of Nemesis. In practice, Iliad and the Odyssey, especially Kalchas in the the limit is roughly defined by what is usual—custom

former and Teircsias in the latter. Theoklymenos had the gift of second sight (v 351 ff.).

There were also oracles to consult. Homer mentions two: that of Zens at Dodona ( $\xi$  327), and that of Apollo at Pytho (Delphi [ $\theta$  80]). We hear a great deal of omens, drawn mainly from signs of the weather and the flight of birds, but sometimes also from such things as a chance word (φήμη, κλεηδών [β 35, σ 117]) or a sneeze (ρ 541). There is no instance, however,—and this can hardly be accidental—of augury from the inspection of entrails or from the behaviour of the sacrifice as the fire consumed it. On the other hand, a dream comes from Zeus (A 63); and we hear of an interpreter of dreams (E 149), which may be false or true ( $\tau$  562 f.). Of magic, except in the fairyland of Odysseus' wanderings, where incredible things may allowably happen, there is practically no mention (see, however, E 845,  $\tau$  457). Cruses were addressed to Hades, Persephone, and the Erinyes (I 454, 569); to make them hear, the mother of Meleagros beat with her hands upon the earth.
II. ETHICS.—The morality of Homer has an

appearance of even greater uniformity and consistency than his religion. It is, on the whole, that characteristic of a feudal society. The cardinal virtue is. no doubt. Courage. Next to Courage virtue is, no doubt, Courage. Next to Courage comes Wisdom, the capacity for thought and speech. The praise of Achilles and Agamemnon is that they are the first of the Danaoi in council and in battle (A 258); and again Achilles was taught to be 'a speaker of words and a door of deeds' But it is in Odysseus that both virtues are most justly combined; and that example helps us to remember—what no Greek was likely to forget—that the mere possession of wisdom was not enough without the eloquence necessary to recom-

mend it.

Besides these special qualities, and, as it were, beneath them, we have to take account of a more comprehensive feeling, which, although scarcely conscious enough of itself to be in the full sense ethical, is the basis of nearly all the moral virtues in Homer. The classical Greek writers spoke of it as a feeling for the exact 'limit' or 'measure' to be observed in the quality of a man's actions. But in Homer it is still in what may be called its instinctive stage, and one detects behind it a greater reinforcement of emotion than goes with the Aristotelian doctrine of the Mean. It has both a positive and a negative side. That is to say, the feeling is positive enough, but it tends to take the form of a protest against excess. The positive emotion is called by Homer 'Aidōs'; Aidōs is what impels us to avoid the excess. The emotion stirred in us by the lack of Aidōs he calls 'Nemesis.' Thus Nemesis comes to be, as it were, the sanction of Aidos. But the good man may feel Aidos in a case where he need not fear the condemnation of gods or men. Then there enters something like the sentiment of Then there enters something like the sentiment of chivalry. Achilles would not despoil the dead Ection of his armour (Z 417 ff.); chieftains must not be laggards in the fight like a mean man (N 114 f.)—noblesse oblige. But Aidos and Nemesis together include more than the medieval ideal, although they have not all its heroic quality. They are applicable to pretty nearly all the relations in which human beings can stand to one another, but especially to that relation which forms the standing moral problem in a society in dissolution or frankly based upon physical force dissolution or frankly based upon physical forcethe relation of the stronger to the weaker. Aides and Nemesis step between conquered and conqueror, preventing the latter from abusing his advantage, from overstepping a certain limit and so becoming guilty of 'Hybris,' which is the violation of Aidos and the object of Nemesis. In practice,

('Dike'), to which time has brought the moral anthority of Law. To observe Dikē is to be just (δίκαιος). For Dikē, the Right Way, we may generally substitute 'Themis,' which is specialized to a slightly more ethical sense. It is the nearest word in Greek to what we mean by the Moral Law, but its roots lie in mere ancient ase and wont; the plural themistes means pronouncements of what is customary, and therefore right and just, in particular cases. In this way a body of precedents may arise, capable in time of being systematized into a legal code. But in Homer we have not yet reached that stage. Even on a point of tribal law there is room for diversity of private opinion—that judgment is best which obtains the applause of the assembled tribesmen (Σ 503 f.). Here public opinion counts for something. But it is only in an ordered society that public opinion can be brought to bear effec-Now, Homeric tively upon individual conduct. society is not highly organized; and so in it Aidos and Nemesis have a supreme value and importance, because, in the absence of an effective administra-tion of justice, it is to them alone in the last resort that the helpless can appeal with any hope of The entirely defenceless in this society consist of the dead, the aged, strangers, and suppliants, every one, in fact, who cannot assert his rights by force and has no one to assert them for Such people are aloofor; Aidos is due to him. them, even belongs to them, almost like an attri-bute. If a man violates Aidōs in dealing with them, they become for the first time dangerous, endowed with some baneful power over his life even in their own death. Homer expresses this by saying that they embody the wrath of the gods (θεῶν μήνιμα [X 358, λ 73]), and often speaks of Zeus as the protector and avenger of the stranger and suppliant. But that is only a more theological way of expressing the more primitive notion that the helpless are charged with a quality which contains in itself some mystic power of punishing its violation. And not only the helpless have this quality, but kings and even, to some extent, old men, the former because of the divinity that hedges them and in primitive communities (not, of course, in Homeric society) guards them by a tabu, the latter because of the sanctity attaching to the male heads of families in a patrilinear tribe. Hence, in Homer, kings and old men are alsoco, the latter for a double reason. Aidos and Nemesis, indeed, are found to inspire nearly the whole of Homeric morality: truthfulness, for instance, and the faithful keeping of a pledge or oath (opkos).

This morality at its best is singularly pure and noble, humane and at times even tender, in spite of the atmosphere of passion and struggle in which the poems are involved. This may easily be illustrated by quotations, from the ringing 'Hateful to me as the gates of Death is the man who hides one thing in his heart and says another' of Achilles (I 312 f.) to the words of Odysseus towards the end of the Odyssey: 'It is an unholy thing to boast over the slain' ( $\chi$  412). But individual quotations scarcely show it so well as the general tone of both epics. Nay, the mere working out of their plots reveals a profound ethical sense. No one can follow the tragedy of Achilles to its conclusion in the last book of the *Iliad* without an enrichment of moral experience; and, when in the Odyssey the suitors at last meet their doom, we feel that this is more than 'nection' instinct.

than 'poetic justice'; it is a kind of theodicee.

The morality of Homer, however, does not everywhere reach this high level. The declensions are rare, but their very rarity makes then instructive. They may be explained in two ways: as justified by the circumstances under which they occur, or as survivals of an earlier stage in the growth of the *Riad* and *Odyssey*, these being regarded on this

hypothesis as traditional poems. If, for example we take the treatment of the dead, we find side hy side with the thrilling humanity of the sentiment that it is an unholy thing to boast over the fallen, and with the implied condemnation of the mutila-tion of Hektor's body, instances of both kinds of brutality (A 146 f., N 202 ff., P 126 ff., E 177; hoasting over the dcad—N 374 ff., 414 ff., 445 ff., etc.). These things, it may be said, are done in hot blood; in his normal moments no warrior would be guilty of them. Perhaps it is because there was a certain deliberateness in the actions that Achilles' treatment of Hektor's body (X 395,  $\Psi$  24) and the sacrifice of twelve Trojan youths on the pyre of Patro-klos (¥ 176) offend the poet. There is only one klos (¥ 176) offend the poet. There is only one ease of torture in Homer (X 474 ff.), which would be justifiable, if torture were ever justifiable. But it is certain that Homer dislikes and makes as little as possible of these inhumanities of warfare; and, if we do find them here and there, it is because they were inherent in the tradition; for they are not romantic horrors invented by the poet, but relics of barbarism, the battle-customs of the Acheans. It has, in fact, been argued that the Homeric poems contain traces of actual expurga-

The Expurgation Theory is primarily Gilbert Murray's (op. cit. ch. v.). The evidence for this cannot he presented except in detail, since it is in minutime only that expurgation is likely to be detected. It may be, for instance, that the incident of the dragging of Hektor hehind the chariot of Achilles has been rehandled so as to make it clear that Hektor was already dead, and not, as another and evidently more primitive version insisted, still alive. There is a line in which it is said that Agamemnon 'drew on,' instead of 'drew oft' or some equivalent word, the tunics of certain men whom he had slain; stripping the dead and tearing their tunics heing regarded as permissible practices (Λ 100; cf. B 416, II 841). There has perhaps been expurgation of some outrage to the corpse of Hektor at Ψ 24 ff., where the language is not easily intelligible except on the supposition of an omission after line 25. Again, it is said in one passage that Odysseus obtained poison for his arrows (a 261). But this is repugnant to the general tone of the Epos. Accordingly it has heen thought that the mention of poisoned arrows elsewhere has heen suppressed, notahly in one passage where Menclaos is wounded by a shaft and Machaon sucks the wound (Δ 218).

But expurgation (it is pointed out) is not always successful: witness the instances given of mutila-tion and cruelty. At the same time it should not be forgotten that Homer is describing a society disorganized by war and recent conquest—the kind of society in which strangers were asked 'whether they were merchants or pirates' ( $\gamma$  73 f.,  $\epsilon$  252 ff.; cf. Thuc. i. 5). In times like those the morality even of good men is put to a searching test, and the surprise comes to be that the Homeric standard is so high. Moreover, it is what is best in the ethics of Homer that is most characteristic; for, as we have seen, its defects are largely traditional or conventional. It is the same with what may be called the domestic morality of the poems. is a wonderful tenderness in the relations of Hektor to Andromache, of Odysseus to Penelope, of Achilles to Thetis, of Alkinoos to Arēte and Nausikaa. One must, of course, allow a little for deliberate idealization, but the nature of the ideal helps us to understand the atmembers of the nature. understand the atmosphere of the normal Homeric household. Sometimes we catch sight of uglier possibilities. Helen and Paris are scarcely a happy pair. There is the extremely painful and pathetic story of Phoinix related in the ninth book of the mind (447 if.). Klytaimnestra figures prominently in the background of the Odysscy. Yet here again it is the more favourable picture that gives the truer view. The Odyssey might almost be called a celebration of the domestic virtues.

In essentials, Homeric morality is that of the great period of Athenian history, although there are things in Homer which shocked the moral sense, of philosophers at least, in Ionia and Athens, just as, on the other hand, there were certain

vals from an age of embalming and inhumation (e.g. use of  $\tau \alpha \rho \chi \dot{\nu} \epsilon \iota \nu$  [O 413,  $\omega$  65]). The exact weight to be assigned to these indications is not easy to judge. They may qualify a little, but they do not alter, the fact that in Homer the dead are always burned, and that their souls exist in separation from their bodies in a world reached at the verge of Occanus in the extreme West; whereas the normal Greek practice was to inhume the dead, and the normal Greek belief was that the soul after death somehow maintained its connexion with the body, and that the realm of Hades was nnder the earth—as at least one passage in the Riad implies (T 61)—to be reached by certain known caverns or clefts in the ground. The contradiction is radical. Ghost-worship, hero-worship -the whole of that chthonian religion which meant so much to the Greeks of history—are steadily ignored in Homer; Hades and Persephone are mere names.

3. Ritual and priests.—The gods are approached by men with prayer and burnt-offering. The two things naturally go together; and, when prayer is made to a god without sacrifice, it usually contains a reminder of sacrilices offered on previous occasions (cf. A 40). That is because the attitude of the worshipper is not unfairly expressed as do ut des. For the same reason a prayer usually includes a vow to make an offering to the god, if the request be granted. Doubtless there is in Homer some lingering feeling that the sacrifico is more than a mere business transaction, that the god of one's own tribe will be more disposed to accept it than an alien deity, perhaps even that the relation thus established between worshipped and worshipper has a certain mystical force. But he does not think of sacrifice as a sacrament. The ritual is elaborately described for us, most fully in the third book of the Odyssey, when Nestor sacrifices an ox or cow to Athena (431 ff.). The victim had to be appropriate, as a bull to Poseidon (A 728,  $\gamma$  6), a white male lamb to Helios ( $\Gamma$  103), and so on. The victim was expected to be unblemished, and the sacrificers must be ceremonially clean. Sacrifice offered in confirmation of an oath is exceptional in admitting a mimetic or at least symbolical element: 'whichever side breaks the oath first, may their brains be spilt on the ground like this wine! ( $\Gamma$  300); and the flesh of the victim was not eaten (310). Since we have to do in Homer with burnt sacrifice to the heavenly gods, the altars he speaks of are the high bōmoi. The low eschara, which served as altar in hero-worship, means in the Homeric poems simply a hearth ( $\eta$  153). Temples are rarely mentioned, and then in passages whose evidential value is questioned (see Caner, Grundfragen<sup>2</sup>, Leipzig, 1909, p. 297 f.). There are certainly many reminiscences of a time when temples did not as yet exist, and the altar of the god stood in the open air, in a grovo or sacred enclosure (\(\tau\ellipser\) (\(\tau\ellipser\)), or by running water (B 305, 506, I 404, \(\xi\) 291, etc.). Only one statue is mentioned—that of Athena in her temple at Troy, which must have represented the goddess as scated (cf. Z 303), although the earliest images of the gods were standing. As to priests, they are always attached to some special sacred place and the service of some special divinity. There is no priestly easte in Homer any more than in historical Greece. Sometimes we meet with a priest of a very primitive type, like Maron who 'dwelt in the grove of Apollo' (1200), like Chryses, who is called an departs, or enrising-man (A 11), like the Selloi at Dodona, who had neverther feet and sleept on the ground who had unwashen feet and slept on the ground (II 235). These last were perhaps prophets rather than priests; and prophets, as we must expect in every saga, play a considerable part in both the *Hiad* and the *Odyssey*, especially Kalchas in the former and Teiresias in the latter. Theoklymenos had the gift of second sight (v 351 ff.).

There were also oracles to consult. Homer mentions two: that of Zeus at Dodona (§ 327), and that of Apollo at Pytho (Delphi [\$\theta\$ 80]). We hear a great deal of omens, drawn mainly from signs of the weather and the flight of birds, but sometimes also from such things as a chance word (φήμη, κλεηδών [β 35, σ 117]) or a sneeze (ρ 541). There is no instance, however,—and this can hardly be accidental—of augury from the inspection of entrails or from the behaviour of the sacrifice as the fire consumed it. On the other hand, a dream comes from Zeus (A 63); and we hear of an interpreter of dreams (E 149), which may be false or true (7 562 f.). Of magic, except in the fairyland of Odysseus' wanderings, where incredible things may allowably happen, there is practically no mention (see, however, E 845,  $\tau$  457). Curses were addressed to Hades, Persephone, and the Erinyes I 454, 569); to make them hear, the mother of Meleagros beat with her hands upon the earth.

II. ETHICS.—The morality of Homer has an appearance of even greater uniformity and consistency than his religion. It is, on the whole, that characteristic of a feudal society. The cardinal virtue is, no doubt, Courage. Next to Courage comes Wisdom, the capacity for thought and speech. The praise of Achilles and Agamemnon is that they are the first of the Danaoi in council and in battle (A 258); and again Achilles was taught to be 'a speaker of words and a door of deeds' But it is in Odysseus that both virtues are most justly combined; and that example helps us to remember—what no Greek was likely to forgct—that the mere possession of wisdom was not enough without the eloquence necessary to recom-

mend it.

Besides these special qualities, and, as it were, beneath them, we have to take account of a more comprehensive feeling, which, although scarcely conscious enough of itself to be in the full senso ethical, is the basis of nearly all the moral virtues in Homer. The classical Greek writers spoke of it as a feeling for the exact 'limit' or 'measure' to be observed in the quality of a man's actions. But in Homer it is still in what may be called its instinctive stage, and one detects behind it a greater reinforcement of emotion than goes with the Aristotelian doctrine of the Mean. It has both a positive and a negative side. That is to say, the feeling is positive enough, but it tends to take the form of a protest against excess. The positive emotion is called by Homer 'Aidōs'; Aidōs is what impols us to avoid the excess. The emotion stirred in us by the lack of Aidōs he calls 'Nemesis.' Thus Nemesis comes to be as it were the spection of Aidōs. But comes to be, as it were, the sanction of Aidos. But the good man may feel Aidos in a case where he need not fear the condemnation of gods or men. Then there enters something like the sentiment of chivalry. Achilles would not despoil the dead Ection of his armour (Z 417ff.); chieftains must not be laggards in the fight like a mean man (N 114f.), pollegge align. But Aides and Namesia not be laggards in the light like a mean lifat (N 114 f.)—noblesse oblige. But Aidos and Nemesis together include more than the medieval ideal, although they have not all its heroic quality. They are applicable to pretty nearly all the relations in which human beings can stand to one another, but especially to that relation which forms the standing moral problem in a society in dissolution or frankly based upon physical force dissolution or frankly based upon physical force-the relation of the stronger to the weaker. Aid and Nemesis step between conquered and conqueror, preventing the latter from abneing his advantage, from overstepping a certain limit and so becoming guilty of 'Hybris,' which is the violation of Aidos and the object of Nemesis. In practice, the limit is roughly defined by what is nsnal—custom

('Dike'), to which time has brought the moral anthority of Law. To observe Dikē is to he just (δίκαιος). For Dikē, the Right Way, we may generally substitute 'Themis,' which is specialized to a slightly more ethical sense. It is the nearest word in Greck to what we mean hy the Moral Law, but its roots lie in mere ancient use and wont; the plural themistes means pronouncements of what is customary, and therefore right and just, in particular cases. In this way a hody of precedents may arise, capable in time of being systematized into a legal code. But in Homer we have not yet reached that stage. Even on a point of tribal law there is room for diversity of private opinion—that judgment is hest which obtains the applause of the assembled trihesmen (2 503f.). Here public opinion counts for something. But it is only in an ordered society that public opinion can he brought to hear effectively upon individual conduct. Now, Homeric society is not highly organized; and so in it Aidôs Now, Homeric and Nemesis have a supreme value and importance, hecause, in the absence of an effective administration of justice, it is to them alone in the last resort that the helpless can appeal with any hope of The entirely defenceless in this society consist of the dead, the aged, strangers, and suppliants, every one, in fact, who cannot assert his rights hy force and has no one to assert them for Such people are alooio; Aidos is due to him. them, even belongs to them, almost like an attri-If a man violates Aidos in dealing with them, they become for the first time dangerous, endowed with some haneful power over his life even in their own death. Homer expresses this by saying that they embody the wrath of the gods (θεων μήνιμα [X 358, λ 73]), and often speaks of Zeus as the protector and avenger of the stranger and suppliant. But that is only a more theological way of expressing the more primitive notion that the helpless are charged with a quality which contains in itself some mystic power of punishing its violation. And not only the helpless have this quality, but kings and even, to some extent, old men, the former because of the divinity that hedges them and in primitive communities (not, of course, in Homeric society) guards them by a tabu, the latter because of the sanctity attaching to the male heads of families in a patrilinear trihe. Hence, in Homer, kings and old men are alocio, the latter for a double reason. Aidos and Nemesis, indeed, are found to inspire nearly the whole of Homeric morality: truthfulness, for instance, and the faithful keeping of a pledge or oath (δρκος).

This morality at its best is singularly pure and noble, humane and at times even tender, in spite of the atmosphere of passion and struggle in which the poems are involved. This may easily he illustrated by quotations, from the ringing 'Hateful to me as the gates of Death is the man who hides one thing in his heart and says another' of Achilles (I 312f.) to the words of Odysseus towards the end of the Odyssey: 'It is an unholy thing to boast over the slain' ( $\chi$  412). But individual qnotations scarcely show it so well as the general tone of both epics. Nay, the mere working ont of their plots reveals a profound ethical sense. No one can follow the tragedy of Achilles to its conclusion in the last hook of the Niad without an enrichment of moral experience; and, when in the Odyssey the suitors at last meet their doom, we feel that this is more than 'noctic justice' it is a kind of theodists.

than 'poctic justice'; it is a kind of theodicee.

The morality of Homer, however, does not everywhere reach this high level. The declensions are rare, but their very rarity makes them instructive. They may he explained in two ways: as justified by the circumstances under which they occur, or as survivals of an earlier stage in the growth of the Riad and Odyssey, these being regarded on this

hypothesis as traditional poems. If, for example we take the treatment of the dead, we find side by side with the thrilling humanity of the sentiment that it is an unholy thing to boast over the fallen, and with the implied condemnation of the mutilation of Hektor's body, instances of both kinds of hrutality (Λ 146 f., N 202 ff., P 126 ff., Σ 177; boasting over the dead—N 374 ff., 414 ff., 445 ff., etc.). These things, it may be said, are done in hot blood; in his normal moments no warrior would be guilty of them. Perhaps it is because there was a certain deliherateness in the actions that Achilles' treatment of Hektor's body (X 395, 4 24) and the sacrifice of twelve Trojan youths on the pyre of Patro-klos (4 176) offend the poet. There is only one klos (¥ 176) offend the poet. There is only one case of torture in Homer (X 474 ff.), which would be justifiable, if torture were ever justifiable. But it is certain that Homer dislikes and makes as little as possible of these inhumanities of warfare; and, if we do find them here and there, it is because they were inherent in the tradition; for they are not romantic horrors invented by the poet, but relics of harharism, the hattle-customs of the Acheans. It has, in fact, been argued that the Homeric poems contain traces of actual expurga-

The Expurgation Theory is primarily Gilhert Murray's (op. cit. ch. v.). The evidence for this cannot be presented except in detail, since it is in minutia only that expurgation is likely to be detected. It may be, for instance, that the incident of the dragging of Hektor behind the chariot of Achilles has heen rehandled so as to make it clear that Hektor was already dead, and not, as another and evidently more primitive version insisted, still alive. There is a line in which it is said that Agamemnon 'drew on,' instead of 'drew off' or some equivalent word, the tunics of certain men whom he had slain; stripping the dead and tearing their tunics heing regarded as permissible practices (Λ 100; cf. B 416, Π 841). There has perhaps been expurgation of some outrage to the corpse of Hektor at Ψ 24 ff., where the language is not easily intelligible except on the supposition of an omission after line 25. Again, it is said in one passage that Odyssaus obtained poison for his arrows (a 261). But this is repugnant to the general tone of the Epos. Accordingly it has been thought that the mention of poisoned arrows elsewhere has heen suppressed, notahiy in one passage where Menelaos is wounded by a shaft and Machaon sucks the wound (Λ 218).

But expurgation (it is pointed out) is not always successful: witness the instances given of mutilation and cruelty. At the same time it should not he forgotten that Homer is describing a society disorganized by war and recent conquest—the kind of society in which strangers were asked 'whether they were merchants or pirates' (773 f., 252 ff.; cf. Thuc. i. 5). In times like those the morality even of good men is put to a searching test, and the surprise comes to be that the Homeric standard is so high. Moreover, it is what is best in the ethics of Homer that is most characteristic; for, as we have seen, its defects are largely traditional or conventional. It is the same with what may be called the domestic morality of the poems. There is a wonderful tenderness in the relations of Hektor to Andromache, of Odysseus to Penelope, of Achilles to Thetis, of Alkinoos to Arête and Nausikaa. One must, of course, allow a little for deliberate idealization, hat the nature of the ideal helps us to understand the atmosphere of the normal Homeric household. Sometimes we catch sight of uglier possibilities. Helen and Paris arc scarcely a happy pair. There is the extremely painful and pathetio story of Phoinix related in the ninth book of the Riad (447 ff.). Klytaimnestra figures prominently in the background of the Odyssey. Yet here again it is the more favourable picture that gives the truer view. The Odyssey might almost he called a celebration of the domestic virtnes.

In essentials, Homeric morality is that of the great period of Athenian history, although there are things in Homer which shocked the moral sense, of philosophers at least, in Ionia and Athens, just as, on the other hand, there were certain

practices tolerated by public opinion in Classical Greece with which Homer will have nothing to do. It must be admitted that he has no moral philosophy, in the same way and for the same reason that he has no philosophy of religion. One has but to think of Aschylus or even Pindar to realize how nuspeculative he is. But that was inevitable. Apart from the fact that a poet is not a moralist, a poem like the Riad must reflect the national point of view—at any rate the point of view of a dominant class in the nation—and not that of the individual artist. Hence the morality of the Homeric poems is popular morality, raised to a new power in virtue of the new splendour of expression given to it. For this reason they were for centuries regarded, in spite of an occasional protest like that of Plato, as a kind of handbook of ethics; as such they were taught in schools. It is impossible to exaggerate the positive influence of Homeric religion and morals in the ancient world and upon modern ideas concerning paganism. They do, in modern ideas concerning paganism. They do, in fact, constitute a great deal of what has hitherto been understood by that elusive word.

been understood by that elusive word.

LITERATURE.—Since the religion and cthics of Homer form an important chapter in the history of Greek religion and morality as well as one of the central problems of the 'Homeric Question,' the literature is very large. Of the older books, C. F. Nägelsbach, Homerischer Theologie?, Nüremberg, 1861; E. Buchholz, Die homerischen Realien, Leipzig, 1871-85 (iil. 'Die homer. Götterlehre,' etc.); and W. E. Gladstone's books on Homer have collected the facts. One may now use T. D. Seymour's Life in the Homeric Age, New York, 1907, in its relevant chs., and O. Gruppe's Griech. Mythol. u. Religionsgesch. (in Iwan Müller's Handbuch d. klass. Altertunswissenschaft), Munich, 1996. The evidence is discussed in L. R. Farnell, Cults of the Greek States, Oxford, 1896-1999; in J. E. Harrison, Prolegomena to the Study of Greek Religion, Camb. 1903, and Themis, do. 1912; in E. Rohde, Psychet, Tühingen, 1907; in Gilbert Murray, Rise of the Greek Epie? Oxford, 1911, and Four Stages of Greek Religion, London, 1912, ch. ii.; and in Andrew Lang, World of Homer, London, 1919.

The articles in Roscher and Pauly-Wissowa may also be consulted. Of the historians of Greece, perhaps E. Meyer has treated the subject most suggestively in his Gesch. des Alterthums, ii., Stuttgart, 1893, p. 42 t.

HONESTY.—Honesty, or the quality of being honest, is a virtue which belongs to the ethical genus justice. In common usage, it often approximates in meaning to honour (q.v.). As the original honestas is the character or repute attaching to the holder of an honos, or position of dignity, so honesty may be distinguished from honour as cause from effect, when the latter is used in its objective sense as the respect in which the individual is held by If we trace the nsage of the word in English literature, we find that it has various shades of meaning, including chastity, or virtue in the limited sense (cf. the famous passage in Shakespeare, Hamlet, III. i. 107, and also As You Like It, III. iii. 30), generosity, uprightness, truthfulness, and fidelity in one's relationships with others. Inasmuch as the virtue of honesty involves regard both for moral rights and for rights of property, it may equally well be classified under benevolence and under justice; for Aristotle's definition of justice as the practice of entire virtue towards one's neighborr (Eth. Nic. v. 13) is in modern ethics widened ont by the concept of benevolence (q.v.), which is the principle of seeking the good of the individual as man and not merely as a member of the same polis, or community (cf. J. H. Muirhead's classification of the forms of good in *Elements of Ethics*, London, 1910, p. 201). Breaches of the law of justice or benevolence, when these take the form of dishonesty, untruthfulness, or covetousness, are

commonly judged bad on the ground of the harm that they inflict on others. The essence of honesty as an other-regarding virtue consists in conduct based on the conviction that the interest of our neighbours is identical with our own. The Christian conception of 'the Kingdom of heaven' in its social aspect implies a standard of conduct in which the well-being of others is not distinguished from one's own well-being. Hence, in comparing the utili-tarian formula, 'every one should count for one and no one for more than one, with Kant's categorical imperative, T. H. Green (*Proleg. to Ethics*\*, Oxford, 1890, p. 224f.) prononness the latter superior as the rule on which the ideally just or honest man acts. Whether the summum bonum be defined as self-realization or 'the Kingdom of heaven' in the Christian scheme of life, humanity in the person of every one is always to be treated as an end and never merely as a means. Every one has a suum which every one else is bound to render him' (ib.

Cicero (de Offic. III. xxi. 83) identifies honestum (the Latin form of το καλόν) with utile, after the manner of the Stoic ethics (cf. 'honestate dirigenda ntilitas est, et quidem sic ut hacc duo verbo inter se discrepare, re unum sonare videantur'-a dogma of ancient philosophy which is perpetuated in the maxim 'honesty is the best policy'). The identification of honesty with expediency belongs to an

obsolete view of society.

'It is to the duties of Justice and Benevolence taken together that we should ultimately refer the duty of Loyalty to existing social institutions and particularly to the State; the duty of Honesty, which means respect for the existing laws of property so long as they are not capable of immediate improvement by the individual's own action' (H. Rashdall, Theory of Good and Evil, Oxford, 1907, ii. 273).

The scrupulous regard for the rights and possessions of others which honesty is commonly held to imply is capable of extension in various directions. There is, for example, the duty of producing (or trading with) nothing which is not what it professes to be. J. S. Mackenzie (Manual of Ethics\*, London, 1900, p. 221) refers to Ruskin's teaching on modes of artistic expression (see ch. 'The Lamp of Truth,' in the Seven Lamps of Architecture) and also to the knowledge of the 'crammer.' An 'honest day's work' means no shirking, just as an 'honest' piece of cloth means just length or breadth (see quotation from Bischoff, Woollen Manuf., 1862, ii. 95, in OED, s.v. 'Honesty'). There is also the duty of being honest with one's self, the courageous acknowledgment of failure or defect. Many problems of ensuistry arise ont of the suppressio veri or suggestion falsi adopted, e.g., by a legal advocate engaged in the attempt to save the guilty (see H. Sidgwick, Methods of Ethics, London, 1901, on 'Veracity'); or, again, out of the practice of subscribing to a formula or creed the terms of which can no longer be interpreted in their original sense; or out of the failure of individual members of a trade union to keep the obligation entered into by their leaders. Such cases are, in general, to be determined by the consideration of the effects of our action on the moral world of which we are members (cf. Mackenzie, op. cit., on 'The Commandments,' cxi., with quotations in the footnote, p. 206). The honest life, which includes honesty of speech and deed and motive, is not to be regulated by any outward code of duties; for, if in cthical theory it is based on respect for the social order, from the religious standpoint it owes its sanctions to the Divine ideal of perfection expressed by the Psalmist in the words, (Then during the first the instance of the first the first the instance of the first Thon desirest truth in the inward parts' (Ps 516). R. MARTIN POPE.

HONEY.—I. Honey was highly valued among the ancients, both as a food and on account of the inherent properties which it was supposed to pos-

The esteem in which it was held by the ancient Hebrews is indicated by the insistence upon the character of the Promised Land as a land flowing with milk and honcy (Dt 6s and often), while it is frequently used in simile or metaphor in the OT, especially in the Psalms—e.g. of the word of Jahweh, 'sweeter than honey and the honeycomb' (Ps 19<sup>10</sup>). The remembrance of a good man is 'sweet as honey in all mouths' (Sir 49<sup>1</sup>). Three different kinds of honey are mentioned in the Bible. Of these, however, the term d'bhash (very frequent) covers not only the glutinous bee honey frequent) covers not only the glutinous bee honey or vegetable honey, but a syrup of dates or dates themselves, and the syrup of grapes; the last, under the name of dibs, is still common in Arabia, and looks like coarse honey; indeed, since the spread of Islām it has become the principal form in which the grape is used. The other forms of honey mentioned are ya'ar (Ca 51), the honey of bees only; and nopheth (Pr 53 2418 277, Ca 411), asually associated with the honeycomb. Josephus mentions bees' honey as a natural product of the Plain of Jericho (BJ iv. viii. 3), probably referring to the honey of wild bees found in the rocks. Although there is no reference in the OT to the domestication of bees, it was of great antiquity in Syria; it is first mentioned by Philo, who says that the Essenes were fond of honey. The Jews took honey by smoking out the bees, but two combs were left for the winter. It was eaten alone as a delicacy (of. the use made by Samson of the honey taken from the lion [Jg 140]), or as a relish with other articles, sometimes with curdled milk. It was also used to sweeten cakes (cf. Ex 1631, Ps 119103). A drink resembling mead was composed of wine, honcy, and pepper. Honey also formed an important staple of commerce, being exported in jars through Tyre. With butter and milk it is still one of the favourite foods of the Bedawin.

2. Throughout the whole Mediterranean area, honey was used for sweetening purposes until the introduction of sugar under the Roman Empire. The ancient Egyptians made a sweet beer from honey; the Homeric heroes drank a liquor of which honey was an ingredient (cf. 11. xi. 630 f.). In later times, honey was used largely by the Greeks in making the many varieties of cakes (πλακοθντες, πέμματα) eaten as dessert, of which they were extremely fond, special varieties being made at Syracuse, Samos, Alexandria, and elsewhere (Athenœus, xiv. 645 f.). The Pythagoreans are said to have lived are diet of bread and honey (ib. ii. 47). The lived on a diet of bread and honey (ib. ii. 47). metheglin of the ancient Briton and the mead of the Teutonic races were compounded of honey; in the Chronicle of Saxo Grammaticus (tr. Elton-Powell, London, 1894, p. 393 ff.), Starkad includes the drinking of mead among the luxurious habits introduced into Scandinavia by the Teutons. A mead or honey ale is mentioned in the Rigyeda. The Roman mulsum, the Russian lipetz, and the clary and bragget of medieval England, are beverages in the composition of which honey was

3. At one period in Egypt and Assyria, honey was used for embalming the dead. The Muhammadan writer 'Abd al-Latif mentions the case of a child whose body was found in a sealed jar of honey. Anointing the dead with fat and honey for purposes of preservation is mentioned in Homer (N. xix. 38, xxiii. 170). The body of Alexander the Great was preserved by this method; and Josephus (Ant. XIV. vii. 4) says that the body of line Anistabula was last in the property of the control of the contr king Aristobulus was kept in honey until Antony sent it to the royal cemetery in Judea.

4. Honey forms an important element in the diet of many primitive peoples. In Australia, where food is frequently difficult to obtain, it is in great request.

VOL. VI.-49

When the honcy has been ladled out with mops from the hollow tree in which the nest is usually situated, it is mixed with water in wooden troughs, and sometimes left to ferment. In a children's game imitating the taking of honer, the piled-up hands are removed one by one to represent the lopping of tho boughs; if girls are playing, their arms are supposed to be lopped at the elbow, as women are allowed to touch only the honey from the lower limbs of the tree where the drippings are (N. W. Thomas, The Natives of Australia, London, 1905, pp. 111, 133). Honey is also obtained by digging out the nests of the honey and (Spencer-Gillen, Across Australia, London, 1912, t. 192), or direct from flowers by sucking or scaking.

Honey-beer or honey-wine is commonly drunk by most of the tribes of South and East Africa. In Nigeria, honey and millet is a favourite drink (A. J. N. Tremearne, 'Notes on the Kagoro and other Nigerian Head-Hunters,' JRAI xlii. [1912]

The honey of the wild black bec, which is used by the Bathonga for purposes of divination in magical horns, is obtained by digging out the nests, which are some two to three feet underground. Although any one may eat the honey, the nests can be found only by members of certain families (H. A. Junod, The Life of a South African Tribe, London and Nenchatel, 1912, i. 263).

The Anyanja of Central Africa, whose only bread is a roll called mkate made of maize flour, bananas, and honey, use honey from the nests of wild bees, found in hollow trees, but the river people hang cylindrical boxes on the trees in which the wild bees build. The cylindrical bee-box is in use as a hive for wild bees among most East African peoples. Rights of property in these boxes are recognized. Among the Atharaka, who cultivate honey in barrels similar to those in use among the Akamba, ownership is established by brands consisting of elaborate arrangements of dots and strokes. Honey is taken by smoking the bees, and is eaten or, more frequently, used for making beer (A. M. Champion, 'The Atharaka,' JRAI xhi. 81). Both the Akiknyu and the Akamba regard the theft of honey as a serious offence. The Akikuyu enforce strictly the equitable distribution of a dead man's property, of which honey forms an important part. After the death of a father, none of the sons may go into the woods to take honey from the father's hives until the paternal nucle has done so. Any who break the law become makwa, and can take honey only when the paternal uncle has provided a sheep to be sacrificed, after due observance of a ritual, by one of the elders.

It has been suggested that the custom has been devised to prevent appropriation of the honey before the estate has been regularly divided up (O. W. Hobley, 'Further Researches into Kikuyu and Kamba Religious Beliefs and Customs,' JRAI xll. [1911] 412).

The Rock Veddas of Ceylon recognized the rights of a family group to collect honey over certain lands from which other families were barred. With them, honey was used not only as a staple of diet, but also as the chief article of barter. The importance attached to it is indicated by the claborate ceremonial preceding the honey-getting to propi-tiate the spirits and seenre a good crop. It is recorded that in olden days a hollow bough containing a wild bees' nest was frequently kept in the rock shelter. The nests are usually found in clefts in the cliffs, and the honey is taken by men who swing down by ladders. Boys are systematically taught to collect honey (C. G. and B. Z. Seligmann, The Veddas, Cambridge, 1911, pp. 62, 91, 252 ff.,

326 ff.).

Honey is also need as an article of barter among the Suk of East Africa, honey-wine being part of the price for which a stranger may hire land, the other part being two goats. The meat is eaten by the fighting men of the tribe, while the elders drink the wine (31. W. H. Beech, The Suk, Cambridge, 1911, p. 17). The Masal youth opens negotiations for his marriage by sending a pot of honey to the parents of his future bride (J. R. L. Macdonald, 'Tribes met with during the Juda Expedition of 1897-99,' JAI xxxx. (1899) 233).

The custom of reserving the honey-wine for the elders also obtains among the Akiknyu, except at certain festivale, and the Masai. At the Masal circumcision ceremonies, the boney-beer, which forms an important part of the feat, may be drunk only

which forms an important part of the feast, may be drunk only

HONEY 770

by the elders (S. Bagge, 'The Circumcision Ceremony among the Naivasha Masai,' JAI xxxiv. [1904] 167, 169).

5. Honey was largely used by the ancient Egyptians as an ingredient in medicine, and appears frequently in the formulæ of the Ebers and other medical papyri. Pliny (HN xxii, 50) gives a long list of bodily disorders for which it was believed to be an efficacious remedy. The Greeks regarded a diet in which honey was the chief element as especially efficacious in securing longevity; and Deniocritus was said to have delayed his death some days by its smell or exhalation (drapopd) alone (Athenœus, ii. 47 f.). In Brand's Popular Antiquities (1870 ed., iii. 54), old honey is mentioned as a favonrite cure for cough or bile, and is said to increase strength and virility.

Medicinal and health-giving properties are attributed to honey by primitive races as well as by the ancients. The Veddas regarded the good health they formerly enjoyed as due to the fact that at one time their diet consisted largely of honey (Seligmann, 326). The Akikuyu medicine-man mixed honey with the decoction of herbs which he administered in cases of illness (H. R. Tate, 'Further Notes on the Kiknyu Tribe of British East Africa,' JAI xxxiv. 262).

Possibly the same idea underlies the custom followed by the Wa-Saria of British East Africa which decrees that, after the birth of a child, the mother during the period of seclusion shall eat only honey mixed with hot water. Male children after cirbirth of a child, the mother during the period of seclusion shall eat only honey mixed with hot water. Male children after circumcision, which takes place at the age of three or four years, for seven days eat nothing but honey mixed with a very little water (W. E. H. Barrett, 'Notes on the Customs and Beliefs, etc., of the Wa-Giriama of British East Africa,' JRAI xii. 28, 31). Nandi boys, after circumcision, must eat from honey-barrels, and not from their usual hide-platters (A. C. Hollis, The Nandi, Camoridge, 1909, p. 55). In Madagascar, before circumcision, a drop of honey is placed on the tongue (J. Sibree, The Great African Island, London, 1830, p. 314), while in India the Deccan Brahman drops honey into the mouth of the newborn child; the higher-class Hindus, especially the Brahmans, do the same, but use a gold spoon or a ring (J. M. Campbell, 'Notes on the Spirit Basis of Belief,' IA xxiv. [1895] 259). Honey is sometimes used among the Muhammadans of the Panjab as the chief ingredient of the ghuffi given frequently for a period extending over some days to a new-born child by the most respected matron of the family, as a part of the birth ceremonies, in order that the child may absorb her virtues (H. A. Rose,' Mihammadan Birth Observances in the Punjab,' JRAI xxxvii. [1907] 242). xxxvii. [1907]242).

6. Honey was regarded by the ancients as a substance of great purity, not unnaturally, in view of the supernatural origin and powers attributed to bees in primitive belief. Milk and honey in the early Christian Church was held to suggest conseeration, while a portion of milk and honey was placed in the mouth of the newly-baptized, in allusion to the name anciently given to Canaan (Augusti, Christl. Archäol., Leipzig, 1836, ii. 446; ef. also Drews, PRE<sup>3</sup> xii. [1903] 704). On the other hand, in some of the instances cited, honey was administered at critical seasons, namely, at initiation or soon after birth, when evil spirits might be expected to be specially potent. Honey and sweet things were believed to drive evil spirits In the ceremonies following birth among away. the Hindus of the Panjab, sweetmeats play an important part, and at one stage are passed around the head of the child for the stated purpose of driving away evil spirits (H. A. Rose, 'Hindu Birth Observances in the Punjab,' JRAI xxxvii. 231). Marriage is another occasion on which the influence of malignant powers is specially to be feared, and we may attribute the use of honey in marriage eeremonies to its power over spirits, even though mother explanation of the custom be offered by the people themselves—usually that it will seeme harmony in married life. Among the Decean Hindus, when the bridegroom comes to the bride's house, honey and eards are given him to sip. In Bengal the bride bas certain parts of her body anointed with honey. The gypsies and other peoples of the Balkan Peninsula follow the same custom.

Among the gypsies in Servia, in the course of the estemonies which last for several days preceding the marriage, the bride-groom sends the bride skeins of yellow silk, and the next day these are stuck all over her face with honey and purple stain. She then leaves her father's house, and is driven to that of her father-in-law in a cart. On her arrival, there is handed to her by her mother-in-law a sieve of oats and some liouey. She scatters the oats from the sieve and smears the honey on the door-posts.

In Croatia and Turkey a cup of honey is handed to the bride at the door. The Poles ornament the bride's lips with honey. At Vlach weddings, the bride is given honey and butter with which to anoint the door. It is also the custom among the Balkan peoples mentioned above for the bride and bridegroom to eat together, in the evening, a cake baked some days before, which is dipped in honey as it is eaten (E. O. Winstedt, 'Forms and Ceremonies, Journ. Gypsy Lore Soc., new ser., ii. [1909] 352 f.). Among the Bathonga, however, who regard honey as a 'mysterious thing,' a man visiting the relatives of his betrothed must avoid honey, and it must not be eaten in the presence of the bride in the first year of married life; if she per-ecived that her husband had eaten honey, she would return to her parents 'as honey flows' (Junod, op. cit. p. 239).

Among the Argives a cake made with honey was sent from the bride to the bridegroom (Atheneus, xiv. 645). In Modern Greece the priest, bride, and groom walk round the altar through the incense funes while the guests pelt them with sweetments, and among the peasantry honey is smeared on the lintel of the young bride's door (R. Rodd, Customs and Lore of Modern Greece, London, 1892, pp. 91, 96). In connexion with the power of honey over evil spirits, significance attaches to the belief in its cleansing powers held by the Hindus, who use it to wash their household gods.

7. An explanation of the power of boney as a protection against evil spirits may be sought in its use in connexion with religious ritual. Reference has been made to the belief in its purity. By this quality it was peculiarly litted to be the food of the gods. In the Rigyeda, it was regarded as of divine origin; the Asvins earry it to the bees (ef., further, Maedonell, Vcd. Myth. p. 49 f. [GIAP III. i. A. (1897); Hillebrandt, Vcd. Myth., Bonn, 1891-1902, i. 239-241). It is held to be the food of the gods and of divine origin by the Hindus; and, when they take the honey from the hive, they hold in their hand a plant (Ocymum nigrum) sacred to Visnu. Visnu, it will be remembered, was represented as a bee on a lotus leaf, while Krana has a blue bee on his forehead. Honey-mixture was employed in greeting a king, Brāhman, or other guest of honour (Mann, ii. 119 f.; Hillebrandt, Rit.-Lit. p. 79 [GIAP III. ii. (1897)]), and it is also employed in the Vājapeyn saerifice (Satapatha Brāhmana, v. i. 1. 6 fl.; Kātyāyana XIV. ii. 9, iv. 15-18; cf. on this Hillebraudt, 141-143). It is one of the substances given a new-born child in the Ayusya rite and at its first feeding with solid freed at the same forms. food at the age of six months, as well as, according to Kansika Sūtra, xxiii. 1, at the lirst meal eaten in a new home; and it is also enjoined as part of the sacrificial food at the Anvastakya in honour of the manes (Hillebrandt, 45, 48, 82, 95; see also Hillebraudt, Ved. Myth. i. 238-244). In Finnish mythology the bee is implored to fly over the moon and any into the dualities of the arcater and to inythology the bee is implored to by over the moon and sun into the dwelling of the creator and to earry health and boney to the good (de Gubernatis, Zool. Mythology, London, 1872, ii. 218). In Teutonic mythology, honey was the chief ingredient of the divine drink (Grimm, Teul. Myth., tr. Stallybrass, London, 1882-88, ii. 695f.), as was nectar among the Greeks. In the Edda a divine fall of honey trickled from the free Yandrasil. The trickled from the tree Yggdrasil. honey trickled from the tree Yggdrash. The Nandi believe that the Thunder-god takes have from their barrels from time to time (Hollis, 135),

HONOUR

while the Veddas invoke the yakina (the female spirits who form one of the chief elements in their religious beliefs) in the ceremony which precedes the taking of honey; they are closely associated with the bees, because they live at the top of high rocks, and some of the honey is poured on the rocks for them when the nests are taken—an ancient custom called 'to charm the drawing of honey' (Selignann, pp. 162, 252, 291).

Honey thus forms a peculiarly appropriate offering to the gods. It was, however, forhidden to the Jews to offer it on the altar (Lv 21), Maimonides says (J. Townley, The Reasons of the Laws of Moses: from the 'More Nevochim' of Maimonides, London, 1827, p. 275), because the heathen nations around offered honey to their gods; according to another suggestion, it was prohibited because it fermented and gave off an unpleasant smell when burnt (Aben Ezra), which was incompatible with a 'fire of sweet savour.' Firstfruits and honey, however, were offered for the support of the high priest (2 Ch 315). A papyrus fragment found at Oxyrhynchus, dating from the 2nd cent. A.D., contains a bill for, among other things, '16 cakes, oil, honey, milk, and every spice except frankincense,' supplied to the Strategus of the nome for 'the sacrifice of the most sacred Nile.' The offering of a honey cake is of frequent occurrence in Greek ritual, especially in connexion with chthonian deities, apparently because bees were regarded as the souls of the dead (Gruppe, Gr. Mythol. und Religionsgesch., Munich, 1906, p. 801; cf. 909 f.), and honey was also used in raincharms (ib. 801, 819).

charms (ib. 801, 819).

Athenmus (xiv. 645) mentions cakes offered to Artemis when the sun was rising and the moon setting. Though no mention is made of honey in their composition, it may be recalled that a priestess of Artemis and Deneter was known as Melissa. At Lehadea, at the shrine of Trophonios, the suppliant went with an offering of a honey cake in each hand for the prophetic snake. A honey cake was put in a hole for the goddess Ge when a certain medicinal herb was gathered in Attica. Cakes of barley and honcy were thrown down a chasm near the sanctuary of Ge in the tenenos of Zeus Olympios at Athons every year (L. R. Farnell, CGS iii. [Oxford, 1907] 10ff.). Sosipater at Olympia had, like Trophonios and Erechtheus, the snake's service of the honey cake (see Fausanias, VI. xx. 3, 5). The cakes were hrought for the serpent, the animal form of the god. Sosipater is apparently the fertility spirit (J. E. Harrison, Themts, Cambridge, 1912, p. 282), but the snake is usually associated with the chthonian aspect of Greek belief; and the other chthonian deities mentioned, though connected with tertility, were prominent in their connexion with the under world.

8. Honey was included in the offerings to the dead. The sweet beer of the Egyptians is mentioned in the Liturgy of Funerary Offerings as well as various kinds of sweetmeats. In view of the fact that the offerings as a whole were intended as food for the dead (q.v.), it would be unsafe to lay too much stress upon this custom as evidence for a peculiar connexion of honey with the spirits. There are, however, several customs followed in parts of Africa which suggest a course of development in which an offering, of which honey forms a part, becomes a protection. In Abyssinia, honeybeer is drunk before a solemn conference. the Suk, hefore drinking a fresh brew of honey-wine, the elder entrusted with the wine-jar fills a cup and pours the wine out on each side of the door, invoking the spirits of the dead to keep them in safety. The elders of the Kikuyu of East Africa, at a burial, pour some honey and cooked fat on the grave after it has been filled in, saying: 'We give you this to drink' (Hobley, JRAI xli. 419). Further, in the course of the ceremonial by which the kirume, or dying curse, is removed, the elders, or rather the members of the special class of clders competent to perform the ceremony, pour fat, milk, honey-beer, etc., into a hole in the ground. From other elements in the ceremony it appears that this is an offering to the spirit of the

departed, but in the underlying ideas propitiation and protection closely approximate. The identification of the two aspects appears to be complete in the folk-stories of the Ekoi of S. Nigeria, in which it frequently happens that the living who have penetrated to the land of ghosts are pursued on their return, and save themselves from further pursuit by spreading food across the entrance to their town (P. A. Talbot, In the Shadow of the Bush, London, 1912, p. 36).

[Bombay, 1895] 259. References for the use of honey in Ancient Palestine will be found in EB, and in McClintock-Strong's Cyclop. of Bibl. Literature, New York, 1872, s.v.

E. N. FALLAIZE.

HONOUR.—I. Ethics.—Honour is high regard or esteem, whether felt, given, or received. It implies, like honesty (q.v.), a sense of what is due or right, and fidelity to one's obligations; like 'honesty,' it is used from Gower onwards (see OED, s.v.) of clastity or purity; and, finally, it takes on a concrete, objective meaning as equivalent to exalted rank or position (or in plur. of marks of regard, distinctions, decorations, and the like). The word has passed into colloquial speech in such phrases as 'on one's honour,' 'honour bright,' etc. (see OED). In the phrase 'code of honour,' the word implies 'a certain system of reciprocal rights and obligations... and also the individual's recognition of these' (see DPhP, s.v.), and in such phrases as 'the honour of an artist' or 'a soldier,' or 'the honour of the army' or 'the church' and other institutions, we have a personal or collective connotation implying recognition of self as a member of this or that community or class or profession. Sometimes the phrase amounts to little more than reputation, e.g. 'the honour of a husband,' when impaired by conjugal infidelity or the failure to ohserve personal obligations.

The 'code of honour' is a species of etiquette

observed by particular classes, trades, professions, etc. It thus belongs to the department of 'minor morals' (see Mackenzie, Manual of Ethics', p. 7, who points out the ethical value of 'Mrs. Grundy' and other conventional laws as safeguards against wrong and injustice). Whether honour takes the form of high-mindedness in business or commercial transactions, or of politeness and good-breeding in society, or of loyalty to one's particular class or caste or denomination, it is to be placed among the virtues as a descendant of hencyolence ('justice touched with emotion'; see Muirhcad, Elem. of Ethics', p. 201). The duties imposed by the code of honour in graver matters, or the code of politcness or good-breeding in lighter matters, according to Sidgwick (Methods of Ethics, p. 31), are often undistinguished from moral duties by unreflective persons; e.g., there is the practice of duelling (q.v.)—a custom which is imposed by an unethical society and which an individual may reject on moral or religious grounds. His conduct would he classed by some as dishonourable, by others as a virtnous act. Thus 'honour' not infrequently involves a conflict with ethical right in certain stages of social development. No discrepancy is felt, e.g., in Hellenic civilization, where the idea of καλοκάγαθία, the code of honour, and the moral code are not differentiated as they are in mediceval and modern times. See the valuable discussion in DPhP already quoted, where the distinction is described as 'a purely sociological distinction quite independent of ethical theory,' and where reference is made to subtle points of casuistry arising ont of the distinction, as when a freemason betrays his country rather than a member of his own chapter (honour versus honour). find a similar conflict of duty in the well-known

couplet of the Elizabethan song-writer, Sir Richard

Lovelace, '1 could not love thee, dear, so much,

Loved I not honour more, where it is implied that the passion of love has to

be subordinated to the higher morality.

In Christian ethics the idea of honour is associated with belief in a moral Judge. So v. Haering (Ethics of the Christian Life, Eng. tr., p. 256 ft.) remarks that 'in the idea of "honour" there is the implicate of the splendour of the Good as exhibited to a judge, whether this judge is the person himself or another; or, finally, God as the reader of all hearts, and the sole Judge of all.' The same writer proceeds to argue that to strive The same writer proceeds to argue that to strive for recognition by a moral judgment is a task which the Christian cannot forgo, and quotes with approval Luther's saying at Worms: They have deprived me of fame and honour, but sufficient for me is my Saviour and Redeemer Jesus Christ. The honour of man is always subordinated by NT writers to the honour to be hereafter accorded by a Righteons Judge (cf. Ro 27, 'seek for glory and honour and immortality'; and 1 P 17, 'found unto praise and glory and honour,' where the idea of a future life is prominent). But the honour of the Judge property the honour of the ladge property to t the Judge perpetuates the honour of this world. The Pauline distinction (2 Ti 220) of vessels 'unto honour' and 'unto dishonour' implies a destiny belonging to time, whatever may be the final issues; it is the destiny of unselfish service, in which the particular ability of the individual is consecrated to the uses of the Master of the 'great house'. The only saintille of honour belonging The only scintilla of honour belonging to the sinner is, according to v. Hacring, the fact of his eternal destiny—a statement which largely defines the assumption underlying Christ's teaching regarding man; for to Him humanity, even in its most degraded form, is endowed with immortality.

2. Psychology.—We may derive some hint as to the psychological value of honour in Paulsen's definition of honour, social or political, as 'ideal self-preservation' (System of Ethics, Eng. tr., ch. vi.); or in v. Haering's remark that 'shame is the guardian of honour' (op. cit. p. 257), which implies that there is a connexion between the moral concept involved in honour and an emotion which, according to Macdongall (Social Psychology, p. 145), is 'second to none in the extent of its influence upon social behaviour.' The conduct of the man of honour is undoubtedly regulated by social blaine and praise. The very idea of 'honour' involves a reference to our social surroughings. involves a reference to our social surroundings, the circle in which we move, or the larger world to which our influence inevitably extends. Psychologically, this is an advance on an earlier stage in the development of self-consciousness when natural impulse is regulated by the system of rewards and punishments imposed upon us by external anthority, c.g. in the family or the school. It is a distinct advance when character and conduct are alike shaped by regard for the moral approval and disapproval of our fellows.

this regard leads on same men to the higher plane of conduct, conduct regulated by an ideal that may render them capable of acting in the way they believe to be right, regardless of the approval or disapproval of the social environment in which their lives are passed (Macdongall, op. cit. p. 202).

The nobler sense of honour which we associate

with the saint or with natures peculiarly sensitive and relined lifts such individuals far above the coarse consideration of the verdicts of the circle to which they belong. R. Browning's Rabbi

ben Ezra, with his conviction,

'All 1 could never be,
All, men Ignored in me,
This, I was worth to God,'

unaffected by the praise or blame of men. At the same time, no ideal of conduct can be perfect unless it is a synthesis of the self-regarding and altruistic sentiments. The life of honour is one which we aim at realizing for all men, while we seek its perfection for ourselves.

R. MARTIN POPE. HOOKER. — I. Life and works. — Richard Hooker, author of Of the Laws of Ecclesiastical Polity, was born at Heavitree, a suburb of Exeter, probably in March 1553-54. He was the son of Roger Hooker and his wife Joan. Roger and his elder brother John are described as the fifth in descent from Ingo Vowell of Pembroke, who married the daughter and heir of Richard Hooker of Hurst Castle, Southampton. Vowell is, therefore, probably the Welsh surnamo. Roger's father and Roger's father and grandfather, with the name Hooker, filled the posi-tion of Mayor of Exeter in the years 1529 and 1490. His brother John, as a result perhaps of his genealogical researches, described himself in early years as Vowell alias Hooker, and later in life as Hooker alias Vowell. This nucle's influence upon Richard's eareer was of such importance, and his work as an antiquarian and historian in originality and thorougliness has so much in common with the more famous achievement of his nephew, that some account should be given of him in any description of Richard's life.

account should be given of him in any description of Richard's life.

John Hooker's father dled when he was about ten years old, and John was educated by Dr. Moreman, Vicar of Menhenlot, In Cornwall. He proceeded to Oxford, to Corpus Christior to Exeter College, where he engaged In legal studies, but took no degree. From Oxford he went to Germany, pursuing his legal studies at Cologne and also at Strassburg, where he lodged in the house of Peter Martyr, and acquired a sympathy with his religious position. Further travels on the Contluent were stopped by war, and he returned to Exeter to devote himself to 'the reading of histories and seeking of antiquities and somewhat to armory.' He was made first chamberlain of the city in 1565. He has left large collections regarding the history of Exeter; but his chief literary monument is his edition of Holinshed's Chronicles in 1586-87, and his own contributions to that compilation. He is the author of a graphic account of the rebellion in the West country in 1549, and of recent Irish history. Ho went to Ireland as the agent of Sir Peter Carew of Mohun's Ottery, near Exeter, who claimed estates in Ireland, and found John Hooker's skill in deciphering and interpreting old deeds and records very inseful in promoting his claims. Hooker's first letter from Ireland, dated May 1508, priges Sir Peter to come to Ireland, and advises him to engage as his steward, to manage his Irish household, Roger Hooker, the writer's brother and the father of Richard. Roger had been 'sometime servant and steward to Sir Thomas Challoner,'and 'now dwelleth with the old Lady Mountjoy.' It is clear, therefore, that Roger's education and social status were below his brother's. Sir Peter brought Roger to Ireland in 1503, and we find him writing as steward from Leighlin, County Carlow, to ask for protection against rebel raiders. He is stated to have died in 1501. John outlived his more famous nephew, dying in November 1601. November 1601.

We can now turn to Isaae Walton's Life of Richard Hooker, which was undertaken at the request of Archbishop Sheldon, in consequence of the imperfections of the Life prefixed by J. Gauden to his edition of Hooker's Works, published in 1662. Walton's famous and beautiful biography appeared in 1665, and has become one of the classics of Eng-But in using it one ought to lish literature. keep in mind that Walton was born in 1593, and was therefore only seven years old when Hooker died, and allowance must be made for the 17th century tone and atmosphere of the biography, which is conveyed with such exquisite literary art. The facts we have given above explain why we hear nothing of Hooker's father in Walton's Life;

This, I was worth to God,'

This, I was worth to God,'

expresses devotion to a spiritual ideal which is

HOOKER

they also give a reason why a special effort should have been made to send Richard to college in 1568because both his father and his nucle were out of England. John Hooker had made the acquaintance of Jewel in 1559, when the Government appointed the latter a commissioner in the West, and it was natural that he should seek the Bishop's help in sending his promising nephew to college. Walton tells us that Richard's exceptional ability was discovered by the schoolmaster of Exeter Grammar School, who declared him a 'little wonder.' But it is Walton rather than the

schoolmaster who gives the description:
'At his being a schoolhoy he was an early questionist, quietly inquisitive why this was and that was not to be remembered; why this was granted and that denied! This being mixed with remarkable modesty and a sweet, serene quietness of nature.'1 Bishop Jewel's patronago obtained for the lad admission to Corpus Christi College, Oxford, probably at first as chorister, and afterwards as clerk; but on Jewel's death in 1571 his pension failed, and Richard's maintenance at college was difficult. His name occurs five times between 1570 and 1575 in the list of poor scholars helped by the London merchant, Robert Nowell.<sup>2</sup> In 1582 the 'Mayor and Chamber' of Exeter granted him a pension of This last assistance was, no donbt, obtained by the influence of John Hooker, who was not the 'rich uncle' Walton supposes him to have been. But the President of the College, W. Cole, out of regard for Jewel and also from a perception of the unusual gifts of his pupil, befriended him steadily. The appointment of the choristers and the elerks was in Colo's hands. It was not till December 1573 that Hooker was admitted one of the twenty discipuli, or scholars, of the College. To help towards his maintenance, pupils were obtained for him. Jewel's friend Sandys, Bishop of London in 1571; interested himself in this matter. His son Edwin, at about the age of twelve, was put under Hooker's charge (the tutor being nineteen), as well as a younger ind, George Cranmer, a great-nephew of Archbishop Cranmer. To the list of those who befriended Hooker in his need we must, no doubt, add his tutor John Reynolds, who came from the village of Pinhoe, close to Exeter.

A full account of the history of Corpns Christi College during Hooker's residence, with a eareful treatment of the question of his maintenance, has been written by T. Fowler, and it forms a valuable and important addition to the Life by Walton. The latter makes it clear that the chief influences upon the young student were those of the dominant school of evangelical roformers. His patron Jowel remained for Hooker 'the worthiest divine that Christendom hath bred for the space of some hundreds of years'; while his tutor Reynolds, who became President of the College in 1598 and the leader of the 'doctrinal Puritans' at the end of the century, was Hooker's critic and confident throughout the composition of the Ecclesiastical Polity. is, therefore, of special interest to find in Fowler's History the point established that there existed in Corpus Christi College 'the leaven of secret Romanism . . . long after the Reformation was definitely settled, certainly through the reign of Elizabeth.' This fact may in part explain Hooker's reliable and reason of Roman Catholic hooks and an enlightened use of Roman Catholic books and authorities. Among his fellow-collegians were men of ability and scholarship who sympathized with the old religion, but had yet learned of necessity to respect and tolerate the now. Hooker's natural passion for truth and tolerance would make him instinctively appreciate and assimilate this attitude of mind.

There is extant a short Latin tract, written probably hetween 1652 and 1655, by a certain Nieholas Morice, one of the Fellows of Corpus Christi College. It is an account of the yearly journey of the President and Fellows to collect the rents of their estates, and is written with amusing viraeity and humour. The writer sympathizes with the old religion: 'A good Papist 1 love; for an honest Protestant 1 can die the death; but an aged trimuer, as I live, I abominate.' He gives us one glimpse of Hooker. A steward has made a foolish speech; 'if keynolds had been listening, 'says Moriee, 'he would have averted his eyes at many parts; if Hooker, he would have smiled, with bent head.' Walton testifies in famous words to Hooker's bashfulness at the end of his life, when 'his poor parish clerk and he did never talk but with their hats both on or off at the same time'; hut his biography does not take lnto account Hooker's humour his blography does not take into account Hooker's humour which Moriee's remark recognizes. William Nutt, for whom Morice wrote his dialogue, was another Fellow of Corpus, obviously of kindred tastes and sympathies. This party in the College was not without its influence on Hooker's development. It ought perhaps also to be remembered that Corpus Christi College was founded in the early part of the century by Bishop Foxe when the 'new learning' of Erasmus and Colet was influencing educational ideals. Foxe appointed a lecturer in Greek, and attempted in theology to replace mediæval schoolmen by the Greek and Latin Fathers of the early centuries. Hooker's rationalism may have been fostered by the traditions of his College and his study of Theodoret and Augnstine.

Hooker graduated B.A. in 1574, M.A. in 1577, and was made a full Fellow of his College in 1579. His special work was to lecture in Logie; and from this, according to Wood, 'his fame grow.' His writings, both in their vocabulary and in general form, retain throughout signs of his early preoccupation with logical terms and logical analysis. In 1579 the Regius Professor of Hebrew was ill from some obscure mental discase, and Hooker was appointed his deputy, and delivered the Hebrew lecture while he remained in Oxford. There is no record when he took orders; but it was before 1581, when he preached in London at St. Paul's Cross. It is probable that his reputation at Oxford was the reason of his being invited to preach this sermon, which was in a true sense the beginning of his career. It contained a distinction between God's 'antecedent' and 'consequent' will, which was supposed to contradict a pronouncoment of Calvin (Inst. iii. 24, § 16), that 'nothing is less accordant with the nature of God than that He should have a double will.' Hooker was, therefore, branded as a man who refused to treat Calvin as infallible. He had probably no intention of opposing Calvin, but from the first the spirit of his preaching and teaching was free, and acknowledged no master but the truth.

The visit to London resulted also, according to Walton, in Hooker's unfortunate marriage to Joan Churchman. R. W. Church has shown reason for doubting the accuracy of Walton's picture of Hooker's married life. It was not till December 1584 that Hooker was presented to the vicarage of Drayton-Beanchamp in Buckinghamshire, and it seems probable that his decision to give up his Oxford life was come to when he was ordained, and was not forced upon him by Mrs. Churchman, as Walton would have us believe. If Hooker had acted with the ludicrous weakness of Walton's story, his friends could hardly have recommended him to Whitgift for the position of Master of the Temple. Hooker was not Whitgift's first choice. His candidate was a certain Dr. Bond, whom tho Queen considered too old for the post. Lord Burghley supported Walter Travers, already the afternoon lecturer at the Temple. Hooker was ap-Hooker was ap-I Dialogus de lustratione Geitonica, qui inscribitur Nuttus.

HOOKER

pointed Master on 17th March 1584-85, perhaps by the support of Archbishop Sandys and Bishop Aylmer; but all the circumstances indicate that he was a man whose ability, learning, and piety were well known, and from whom much might be What immediately followed upon his appointment was a pulpit duel between himself and Walter Travers, the afternoon lecturer, which increased in intensity until, in about a year's time, Travers was inhibited by the Archbishop. Travers at once wrote a 'Supplication' to the Privy Council in defence of his conduct. Hooker replied in an 'Answer,' which he addressed to Whitgift. Besides these documents, there are extant certain sernions in Hooker's Works which contain those opinions of Hooker which Travers specially attacked. These are the sermon of the Certainty and Perpetuity of Faith in the Elect, and the Learned Discourse of Justilication. They were printed by Jackson in 1612; and, while the first can be identified satisfactorily with a sermon objected to by Travers, the second is not a sermon, but an amalgamation of several sermons which cannot be quite certainly related to those mentioned by Hooker and Travers. From these doeuments it is clear that the first eause of difference between the two men was Hooker's refusal to be a party to Travers' attempts to introduce surreptitiously into the congregation his own Presbyterian methods and practices. Travers wished Hooker to submit to some ceremony of 'allowance' by the eongregation, because he held that Hooker had been ordained 'by virtue only of a human creature'; he objected to Hooker praying before his sermon instead of after, to his mentioning bishops in his prayer, and to his kneeling at the reception of the Holy Communion. On these points the two rivals conferred together without coming to any result, so that, as Hooker says, quoting from Travers, it was natural enough that 'many of my sermons have tasted of some sour leaven or other.' Travers' complaints against Hooker's preaching deal with three occasions. He brought up again the sermon of 1581 already referred to; he objected to a position of Hooker, 'that the assurance of that we believe by the Word is not so certain as of that we perceive by sense'; but, thirdly, the matter which finally roused Travers to deliver 'three public invectives' against the Master's teaching was a remark about Roman Catholics. The mothersentence whereof I little thought that so much trouble would have grown' was 'I doubt not but God was merciful to save thousands of our fathers living in popish superstitions, inasmuch as they sinned ignorantly.'

Travers understood Hooker to say 'the fathers,' but his outery eaused Hooker to attempt that

774

summary of the good and bad in the Roman Church which is contained for us in the extant 'Discourse of Justification.' He was, no doubt, unaware of the strength of the fanaticism against which he was measuring himself. He was anxious

to be fair to his Roman adversaries, and not to 'give them an occasion to say, as commonly they do, that, when we cannot refute their opinions, we propose such instead of theirs as we can refute.'

Hooker therefore outraged the prevailing Puritan views on two crucial points: he declined to accept Calvin's opinion as final, and he insisted on giving even Rome a fair hearing. His originality on these two points has not been justly appreciated. Even to-day his point of view is not fully accepted by controversialists. We must realize upon what broad grounds his practice was based. Travers complained that Hooker had said to him that his best author was his own reason'; Hooker replied indignantly:

1 Sermon i., in Church and Paget, iii. 469.
2 Sermon ii., ib. iii. 483.
3 Travers' 'Supplication,' ib. iii. 559.

'I alieged therefore [because Travers had objected to the quotation of authorities] that which might under no pretence in the world be disallowed, namely, reason; not meaning thereby mine own reason, as now it is reported, but trus, sound, divine reason; reason whereby those conclusions might bound, divine feason, reason whereby those concusions migna be out of St. Paul demonstrated, and not probably discoursed of only; reason proper to that science whereby the things of God are known; theological reason, which out of principles in Scrip-ture that are plain, soundly deduceth more doubtful inferences, in such sort that being heard they neither can be denied, nor in such sort that being heard they neither can be denied, nor anything repugnant unto them received, but whatsoever was before otherwise by miscollecting gathered out of darker places, is thereby forced to yield itself, and the true consonant meaning of sentences not understood is brought to light. This is the reason which I intended.'!

Passages like this and many others in the Discourse of the constant of the

eourse of Justification' reveal to us the ardent enthusiasm which burnt beneath the shy exterior of the lecturer in Logic. And to his passion for truth and for the search after truth a second characteristic has to be added which in all Hooker's

writings is felt by the reader:

writings is felt by the reader:

'I take no joy in striving, I have not been nuzzled or trained up in it... There can come nothing of contention but the nutual waste of the parties contending, till a common enemy dance in the ashes of them both... Things of small moment never disjoin them whom one God, one Lord, one Faith, one Spirit, one Baptism, bands of great force, have linked.'

These are the chief points of the dispute with Travers at the Temple. It is to be noted how important they were for the subsequent Church of England. Without the treatise 'Of the Laws of Ecclesiastical Polity' they might not have effected much; but, enlarged and expounded in the first five much; but, enlarged and expounded in the first five books of that work, they made the Church of England neither Rome nor Geneva, but a Church distinet from both. Hooker's treatise did for the Church of England what Calvin's Institutes had done for the Genevan Church; it gave it a voice and a character. It is tempting to dwell on the many anticipations of the Polity which are to be found in these early writings of Hooker, and it is necessary to insist upon their importance, both as historical documents and as revelations of Hooker's mind and disposition. But there is a difference between his point of view in the dispute with Travers and in the composition of the *Polity*. Hooker distrusted 'extemporal dexterity'; he believed time to be 'the only mother of sound judgment and discreet dealing'; and in this spirit he began to examine the questions that Travers had raised. But he found his position at the Temple incompatible with profound and concentrated study. He wrote to Whitgift that he was 'weary of the noise and oppositions of this place'; his contest with Travers had been

the more unpleasant to me because I believe him to be a good

the more unpleasant to me because I believe him to be a good man; and that belief bath occasioned me to examine nine own conscience concerning his opinious; and to satisfy that I have her laws, both human and divine, and others of his judgment ought so to alter our frame of Churchgovernment, our manner of God's worship, our praising and praying to him, and our established ceremonies, as often as his and others' tender examination I have If, but have begun a of the Laws of our to provoke any.

and others' tender
examination I have:

Treatise, in which I
Ecclesiastical Polity.

My meaning is not to provoke any, but rather to satisfy all tender consciences, and I shall nerer be able to do this, but where I may study, and pray for God's blessing upon my endeavours, and keep myself in peaceand privacy and behold God's blessing spring out of my mother earth, and eat my own bread without oppositions.

He asks Whitgift to appoint him to a country living. Another draft of this letter speaks of his desire 'not to provoke your adversary Mr. Cartwright, nor Mr. Travers, whom I take to be mine (but not mine enemy).' When we read the Polity, we find, after the first book, that continually 'T. C.' is quoted as the recognized champion of those opinions for which Travers and his party at the Temple contended. Thomas Cartwright is Hooker's antagonist; Walter Travers is forgotten. This means that Hooker's book is a continuation and review of a controversy that had been going and review of a controversy that had been going 1 Hooker's 'Answer,' to, iii 594.

on since the beginning of Elizabeth's reign. Cartwright returned from Geneva to England in November 1572, probably in time to assist in the writing of 'A Second Admonition to the Parliament'; the first had appeared earlier in the year. In these appeals to Parliament the writers frankly declare their hostility to the English Church as established, and demand a reformation; they insist that the controversy is not 'for a cap, a tippet, or a surplice, but for greater matters concerning a true ministry and regiment of the Church according to the Word. The tracts made a great impression, and Whitgift, with Archbishop Parker's approval, was called upon to reply to the Admonitioners. Before the end of 1572 he published 'An Answer to a certain Libel entituled An Admonition to the Parliament'; a second edition, augmented, was ready in 1573. Whitgift had been Vice-Chancellor of Cambridge University when Cartwright was deprived of his professorship 1 and his fellowship. T. C. therefore came forward as the eliampion of the Admonitioners against Whitgift. By the middle of 1573 he issued 'A Reply to An Answer made of M. Doctor Whitgift against the Admonition to the Parliament.' It was a book so much more considerable than the Admonitions that Whitgift could not leave it unanswered. In a folio of 800 pages he went over the whole cona folio of 800 pages he went over the whole controversy again, producing the work in 1574 and calling it 'The Defenee of the Answer to the Admonition against the Reply of T. C.' The length of the book is partly due to Whitgift's fairness in printing large portions of the arguments of his opponents. Next year (1575)<sup>2</sup> Cartwright was ready again with 'The Second Reply of Thomas Cartwright,' which he followed up in 1577 with 'The Rest of the Second Reply.' To the 'Second Reply' of Cartwright, no answer was made by Reply' of Cartwright no answer was made by Whitgift or by any other representative of the Church as established. Whitgift's friends thought that he had written all that was necessary on the controversy, and his appointment in 1577 to the see of Worcester left him no time for literary controversy. He was made Archbishop of Canterbury in 1583, and in his primacy the attempt to introduce a disciplinarian or consistorial system into the English Church was resisted and defeated. was, therefore, providential for Whitgift that such a champion as Hocker appeared, to remove the reproach that Cartwright's last book had not been answered, and to review the whole controversy with a mastery of logical analysis, a breadth of learning, and a dignity of style beyond the reach of any other disputant. Hooker's book was the last word in the long controversy between Cartwright and Whitgift, but when the first instalment of it appeared in 1594 it was in spirit something altogether new. The sober Hallam declares that Hooker 'mingled in these vulgar controversies like a knight of romanee among caitiff brawlers.' Because he was by temperament and conviction 'no mere champion,' he proved himself the judge and unipire of the lists.

Whitgift did not move Hooker from the Temple till 1591, when he appointed him to the parish of Boscombe, six miles from Salisbury, making him in the same year prebendary and sub-dean of Salisbury Cathedral. In 1595 he was presented to the Crown living of Bishopsbourne, near Canter and the Crown living death. bury, where he remained till his death. A chill

oury, where he remained the mis death. A cillift taken in his passage by water hetwixt London i He was made Lady Margaret Professor in 1509.

In the same year Walter Travers' celebrated treatise was published in both Latin and English, with a letter from Cartwright in its praise. It is called in English, A tull and plain Declaration of Ecclesiastical Discipline out of the Word of God, and of the Declining of the Church of England from the same.

History of England 1, London, 1850, 1, iv. 214.

and Gravesend' brought on his last illness. made his will, 'though sick in body, yet sound in mind, on 26th October 1600; it was proved on 3rd December. There is, therefore, no reason for doubting the Latin note in Archbishop Laud's copy of one of the books of the Polity, which states that Hooker died about 2 o'clock in the afternoon on 2rd Nov. 1600. His will made Lore afternoon on 2nd Nov. 1600. His will made Joan Hooker, 'my well-beloved wife,' sole executrix, and 'my well-beloved father, Mr. John Churchman and my assured good friend,' Mr. Edwin Sandys, overseers. The inventory was £1092, 9s. 2d. It is probable, therefore, that Isaac Walton's account of Hooker's marriage is a distortion of the facts. That Hooker's faculties were unimpaired at the end of his life is clearly shown by the vigour, acuteness, and erudition of the notes he scribbled upon his copy of 'A Christian Letter,' an anonymous attack, published in 1599, npon bk. v. of the

Polity.

2. The 'Ecclesiastical Polity.'—Only five books

1. The 'Ecclesiastical Polity.'—Only five books

2. The 'Ecclesiastical Polity.'—Only five books of the work entitled, 'Of the Laws of Ecclesiasti-cal Polity, Eight Books,' were published in the author's lifetime. The Preface 'to them that seek, as they term it, the reformation of laws, and orders ecclesiastical in the Church of England,' and the first four books, without date, were published in 1594.\(^1\) At the end of the Preface there was a short summary of the proposed eight beoks, indicating that in some form they were nearly complete at that date. It is probable that the defence of the Prayer-Book in bk. v., which is longer than all the others combined, became more elaborate than Hooker at first intended. final description of the fifth book is different from that in the summary of 1594; Hooker linds he must resist the accusation that there is 'much superstition' in the Prayer-Book, and this nocessitates a detailed examination of it. But for the effect which Hocker's book produced upon the public mind it was an advantage that it came out in instalments. The portion published in 1594 was in several respects so counter to popular tendencies, that, if there had been more of it, readers might have found it too much to assimi-The Preface, just at the time when the infallibility of Geneva was becoming almost a dogma among the reformed Churches, reviewed Calvin's character and career impartially, recognizing him as 'incomparably the wisest man that ever the French Church did enjoy,' and praising 'his exceeding pains in composing the Institutions of Christian religion,' and 'his no less industrions travails for expesition of holy Scripture,' but in-sisting that 'wise men are men,' and that what Calvin did for the establishment of his discipline was 'more commendable than that which he taught for the countenancing of it established.'
The Preface has not received the praise which it deserves as a piece of historical literature. If we compare it with the notes upen Calvin made in 1599 on the margins of the 'Christian Letter,' we shall realize that Hooker's account of Genevan affairs was founded upon a careful reading of Calvin's letters and other documents, and shall appreciate the restraint of its style. It is to be regretted that Hooker did not live to expand his note, 'Remember to make a comparison between Calvin and Beza. . . For Beza was one whom no man would displease, Calvin one whom no man durst.' But in the Preface the touch of irony and humour which Hooker allows himself is more effective than direct invective, and runs through his whole exposition of the claims and teaching of the disciplinarian party.

1 They were entered in the Stationers' Register, 29th Jan 2592-03. 2 Church and Paget, L 134.

The most famous book of the Polity is the first. It deals with 'laws and their several kinds in general.' It shows that man is subject not to one It shows that man is subject not to one law, but to many, and insists that the welfare of society depends upon the proper adjustment and correlation of these kinds of law. The inquiry is impressive in its scope and in the range of authorities upon which it is founded. There is a true imaginative grandeur in Hooker's vision of the whole universe of angels and men subordinated under God to the reign of law, which is in all its various forms essentially an expression of the Divine reason. Aristotle and the philosophy of Greece, the Greek and Latin Fathers, and, finally, St. Thomas and the schoolmen, are co-ordinated with the teaching of the Bible in support of an analysis which leads up to the position that 'to measure by any one kind of law all the actions of men were to confound the admirable order, wherein God hath disposed all laws, each as in nature, so in degree, distinct from other. Hallam has pointed out that Suarez, writing on the Continent about the same time as Hooker, arrived at nearly identical conclusions. Raleigh, in his History of the World, starts from Hooker, as an authority already recognized, and the famous passage on law is re-echoed on the stage before 1611. In the latter half of the century, Locke's theories of civil government are founded npon quotations from 'the judicious Hooker.'3

The second book resists the Puritan assertion that Scripture is the only rule of all things which in this life may be done by men. Hooker, admitting that Scripture is an infallible guide, denies that it is the only guide by which men are led, and carries the war into the enemies' camp in the remarkable passage which describes the results which would follow from the extreme Puritan

position:

'For in every action of common life to find out some sentence clearly and infallibly setting before our eyes what we ought to do (seem we in Scripture never so expert) would trouble us more than we are aware. In weak and tender minds we little know what misery this strict opinion would breed, besides the stops it would make in the whois course of all men's lives and actions.'

The third book deals with the view 'that in Scripture there must be of necessity contained a form of Church polity, the laws whereof may in nowise be altered. Hooker does not insist that the polity of the Church he is defending is contained in Scripture; the special point and merit of his argument is that he refuses to allow Scripture to be made a code strangling growth and reasonable freedom. Although he believes episcopal government to be Scriptural, he does not refuse to the Scottish and the French Reformed com-munions the title of Churches. He argues from the controversy on re-baptism in the African Church, in the time of Cyprian, that 'heretics are not utterly cut off from the visible Church of Christ.' All visible Churches, being human, have their blemishes and failures.

The fourth book concludes the general argument by considering the allegation that the English Church 'is corrupted with Popish orders, rites, and ceremonies, banished out of certain reformed Churches.' It therefore treats generally what the

fifth book considers in detail.

The fifth book was published in 1597. It contains 81 chapters. The question of the manner of the ordination of ministers is not reached till ch. 76. The first 75 chapters review public worship as it was regulated by the Elizabethan Book of Common Prayer. In the dedication of the book 1 H. Hallam, Literature of Europe, London, 1837-39, In. iv.

20.

2 In Lodowick Barry's Ram Alley, London, 1611; W. C. Har-litt's Dodstey 4, do. 1874-76, x. 288.

8 H. Hallam, op. cit. II. iv. 40.

to Whitgift, Hooker complains that the controversies concerning 'complements, rites, and ceremonies of church actions are in truth for the greatest part such silly things that very easiness doth make them hard to be disputed of in serious manner.' His treatise, therefore, at every pointwhether he is discussing the use of the apocryphal books, or set prayers, or the use of the psalms, or the celebration of matrimony—strives to discover the first principles upon which practice is founded, and can never lose its interest while public worship is a part of religion. But the most important and masterly chapters are those in which he discusses sacraments and the Lord's Supper (chs. 50-57, and ch. 67). He rejects as discredited the extreme view that the bread and the wine are 'bare signs,' and claims that the 'Sacramentarian' or Reformed Churches have reached a 'general agreement concerning that which alone is material, namely, the real participation of Christ and of life in His body and blood by means of this sacrament. The Lutherans and Papists also accept this 'general agreement'; and the only matter of dispute is 'about the subject where Christ is.' As to this, 'no side denieth but that the soul of man is the receptacle of Christ's presence.' Lutherans and Papists agree so far, but insist further that 'His bedy and blood he also externally in the very body and blood be also externally in the very consecrated elements themselves, either by con-substantiation or by transubstantiation. Hooker, therefore, makes the proposal, which is still too broad in its toleration to be accepted by the Churches: 'Let it be sufficient for mc presenting myself at the Lord's table to know what there I receive from Him, without searching or enquiring of the manner how Christ performeth His promise.

It can hardly be doubted that Hooker left the last three books of his treatise finished at his death, but the finished copies were lost or made death, but the finished copies were lost of made away with, and the books as printed have not received final revision. The sixth book as we have it is not the examination of lay eldership promised in 1594, but a quite different treatise on penance. The genuine sixth book has disappeared. Books vii. and viii. are the rough copies of the promised discussions of episcopacy and the relations of Church and State. Books vi. and viii. were printed in 1648, book vii. in 1662.

LITERATURE.—The standard edition of Hooker's Life and Works is the revision by R. W. Church and F. Paget (7th ed., 8 vols., Oxford, 1888) of Keble's ed. of 1836, in 4 vols. Bk. l. of the Polity has been edited with notes and introduction by R. W. Church, 2nd ed., Oxford, 1876; bk. v. by R. Bayne, with notes and prolegomena, including a life of Hooker, in the English Theological Library, London, 1902. F. Paget prespared for the Clarendon Press an introduction bk. v. (Oxford, 1899). The first five books with two sermons are reprinted, with an introduction by R. Bayne, in Everyman's Library (London, 1907). A careful Bibliography of early editions, Lives, general criticism, and literature is given in the Cambridge History of English Literature (Cambridge, 1909), ill. 547. Consult the Life in DNB, and the art. 'Richard Hooker,' in EBril. The latest criticism of Hooker's styls is in G. Saintsbnry, History of English Prose Rhythm, London, 1912, ch. v. RONALD BAYNE.

HOOLIGANISM .- The word is derived from hooligan, a street rough. Subjectively, it is a spirit or temper; objectively, an outbreak of law-lessness. It is usually applied to lads, sometimes to men and women, and always as a term of opprobrium for lawless behaviour.

i. Origin of the name.—Various origins have r. Urigin of the name.—Varions origins have been suggested, some of them fanciful. (1) It is said to be due to the blunder of a policeman in describing a gang of young roughs as 'Hooly's gang'; (2) it is traced to a fictitious Irish character called 'Hooligan' (Irish for 'Hoolihan'), who figured weekly in a comic paper called Nuggets (NQ, ser. ix., vol. ii. [1898] pp. 227, 316). His German counterpart appeared in the Garland as 'Schneider.' According to NQ (15th Oct. 1898), 'Hooligan' and 'Schneider' had then been familiar personages for about five years. (3) It has been derived from a popular music-hall song which (about 1890) described the doings of a family named Hooligan. A writer in the Evening News of 21st Nov. 1900 said he had often heard the song sung, and quoted the following:

"There's a family living near us—
The Hooligans!
Always in some terrible fuss
Are the Hooligans.
Never known to tell a lie,
They'd sneak yer teeth, and say "Goodbye,"
They could drink the Carlton Brew'ry dry,
Could the Hooligans.

Hooliganism is an international phenomenon. Witness the 'hoodlum' of California, the 'larrikin' of Australia, the 'khuligani' of St. Petersburg, the 'Hooligane' of Germany, and the 'Apaches'

of France and Italy.

2. Characteristics.—Lack of self-control, love of malicious mischief, indifference to the comfort or suffering of others, idleness passing into dishonesty and crime, horseplay passing into violence—mark the hooligan. In one sense, hooliganism is no new thing. We read of it in the Fortunes of Nigel, and in the accounts of the street fights which took place between the apprentices for the 'crown o' the eausey.' University students have always given themselves over periodically to a form of hooliganism—smashing lamps, breaking seats, and turning the Graduation ceremony into pande-monium. In Norman Macleod's day the Glasgow students were declared to be a 'disgrace to the High Street,' and yet a well-marked distinction is always drawn between them and, say, the Govan rivetters who are out to 'paint the town red.'
3. Classification.—Modern hooliganism may be

classified under various heads.

(1) Mob hooliganism, the conduct of the population on occasions of public rejoicing and national victory, as on 'Mafeking' nights. Then the people seem to lose their heads altogether and become disorderly and reckless. Viewed as a support of the province of the people seem to be a support of the symptom of growing instability in the national character, such conduct is serious. Mob mind is a malady of our time (Ross, *The Foundations of Sociology*, New York, 1905, p. 113). Mob hooliganism varies with the density of the crowd. 'The way in which hooliganism asserts itself all depends npon the atmosphere in which the hooligan finds himself' (Westminster Gazette, 6th April 1900,

(2) Political hooliganism, the glaring illustration of which is the conduct of the militant suffragettes. Smashing shop-windows, defacing monuments, setting fire to theatres, throwing hatchets, and assaulting Cabinet Ministers cannot be described as anything but hooliganism of a very bad type. There is manifest lack of self-control, love of malicious mischief, and callous indifference to the sufferings of others. It is only fair to say, however, that militants are in a minority in the Snilrage movement, and that their tactics are strongly disapproved by many as unworthy and unwise, and calculated to hinder rather than help

their cause.

(3) Industrial hooliganism, seen during strikes in assaults upon fellow-workmen, over-zealous picketing, and the destruction of goods, rolling-stock, and property. The workers, as a whole, are not lacking in self-respect or self-control, and the vast majority condemn violence. They showed the most exemplary patience and self-control during the big strikes in Great Britain amongst the miners and dockers (1911–12). When workmen indulge in hooliganism, it is due either to a passioned access of the strike in the st sionate sense of wrong or to the sinister infinence

of the baser sort who mingle with the workers and exploit them for their own nefarious ends.

(4) Literary hooliganism, manifested in savage eriticism of books, of policies, and of parties. The classic examples of the first are the Quarterly's attack on Tennyson, Macaulay's attack on Robert Montgomery, and Blackwood's attack on John Keats. The reviews in those days frequently led to duels, such as that between Jeffrey and Tom Moore. For sufficiently savage and hooliganesque attacks on policies and parties one has only to read the popular magazines and newspapers—especially religious—of the present day.

(5) Criminal hooliganism.—This is the most

serious phase. In all great cities there are gangs of hooligans with sensational names, such as the 'Porty Thieves,' the 'Pontoons,' 'Velvet Caps,' 'Tim Malloys,' 'San Toys,' 'Crush Boys,' 'Plug Uglies,' 'Cop Beaters,' 'Tongh Kids,' and 'Crook Gang.' Jacob Riis, writing of New York, says that 'a bare enunciation of the names of the bestknown gangs would occupy the pages of this book' (How the Other Half Lives, 229). Every street-corner has its gang, with a programme of defiance of law and order. In the United Kingdom things are not quite so bad, and Charles Booth thinks that in London there is a decided improvement (Life and Labour of the People in London, final vol., London, 1902, p. 201).
4. Causes of hooliganism.—The great root-cause

is the undisciplined life, revolt against all authority, human and Divine, which characterizes the lower orders to-day, Roman Catholic as well as Protestant. The present writer's experience as a Prison Chaplain enables him to say that, contrary to a prevailing impression, hooliganism is as rife in Roman Catholic circles as in Protestant. This undisciplined life, however, is itself an effect, the resultant of many causes, some of which may be

here indicated.

(1) Defective education .- Street lads have, as a general rule, managed to slip through the meshes of our educational system with the minimum of instruction. Reading remains for them an irksome task. They find no pleasure in it, and so are cut off from one of the greatest helps to a good life, one of the strongest safeguards against temptation. But their education is defective on the moral side as well as on the literary. Onaracted has not been developed and strengthened, the will has not been taught. They enltured, self-control has not been taught. are children of impulse and passion, and ill fitted to stand amidst the complex conditions of modern eivilization.

(2) Wretched housing is another potent cause of hooliganism. Growing lads and girls in the poorer parts of our big cities are shamefully overcrowded. They have literally no room to live a decent human life, no opportunity of self-realization, no home life to speak of, and so they are driven out to the streets. Home to them means simply a place to eat in and sleep in, and not a place for social recreation or happy fellowship, still less for mental or spiritual culture. The loss is infinite, and

tragic in its results npon character.
(3) Lack of playgrounds and open spaces for wholesome recreation.—When the children are sent out of doors to make more room in the house, they are turned into the street or backalley. The slnm is their playground, and there is no finer breeding-place for young hooligans and criminals. Everything there, the whole environment, conspires to degrade and ruin the boy and girl. The process is sure, and the waste of young fe and capacity is awful.

(4) Misdirected energy iollows naturally. There is nothing wrong with the energy, any more than there is with steam or electricity. What it needs

is guidance into proper channels-not repression, but proper expression. It is easily misguided, misdirected; and the result is hooliganism.

(5) Parental inefficiency must also be named as a rause. The home is to blame as well as the school. Home training is at a discount. Obedience is a lost habit. The parental example is often bad. The parents themselves are largely the creatures of circumstances, the resultant of our social, educational, and industrial system. The children take after their parents, follow the only example they know, and so the vicious circle continues to be

(6) Mental and moral defect.—A very moderate first hand knowledge of hooligans will convince any one that many of them are mentally and morally weak. They are defectives; and experience shows that defectives soon become delinquents. Mental instability is frequently found associated with hooliganism and crime. As already hinted, hooliganism may fairly be described as a byproduct of our civilization. Our social system is largely responsible for it. It is, therefore, a social problem. We must cease to manufacture

hooligans.
5. Cure of hooliganism. — The first serious attempt to deal with it was made in 1788, when the Philanthropic Society was formed in England by Robert Young. In 1806 the Dalston Refuge was founded, and in 1815 the Prison Discipline Society. Parliament began to tackle the subject in 1793, when l'itt brought in a Bill which, how-ever, proved abortive. In 1811 and again in 1819 Parliament condemned the imprisonment of children for lawless conduct. Royal Commissions dealt with the matter in 1834 and 1837. The The Edinburgh Review for Oct. 1851 said:

'The young offender gains ground upon us, the plague of the policeman, the difficulty of the magistrate, a problem to the statesman, and a sorrow to the philanthropist.'

That same year a Committee of the House of Commons recommended the establishment of Reformatory Schools, and in 1857 the Industrial Schools Act was passed. Its results were remarkable. In 1856, no fewer than 13,981 children under seventeen years of age had been committed to prison. In 1897, thanks to Industrial Schools, the number had fallen to 1688. Up to 1901 (according to figures given by John Trevarthen, Secretary of Redhill Farm School, in an article in the Ninetcenth Century for Jan. 1901), out of 3511 reported on by Reformatories, 2666 were in regular employment, 123 in casual employment, 541 had been convicted, and 181 were unknown. Of 8233 reported on by Industrial Schools, 6379 were in regular outployment, 430 in casual employment, 460 had been convicted, and 964 were unknown; i.e. nearly 80 per cent were doing well, and only some 15 per cent had been convicted—a very satisfactory record. The charge, then, that 'Reformatories are hooligan manufactories,' is singularly unjust and ill-informed. Considering the material supplied, the proportion of failures is surprisingly small, and a good many of the failures are caught up and reclaimed by the Borstal system. One-third of our burglars are bys from 16 to 21, and 20 per cent of crimes against morals are committed by those under 21. In 1852, Dickens visited the Philanthropic Society's Farm School, Redhill, and wrote an interesting article about it in Household

Words, ending as follows:

'The system must be devised, the administration must be reared, the preventable young criminals must be prevented, the State must put its Industrial and Farm Schools first, and its pris as ast—and to this complexion you must come. You may put the time off a little, and destroy (not irresponsibly) a few odd thousands of immortal souls in the meantime, but the change must come.

These words were prophetic. The change has come. We are now putting our schools first, and our

prisons last, that is, educative methods are displacing punitive methods. Hence the new treat-ment of juvenile offenders, wise and firm, known as the 'Borstal.'

6. Preventive measures. — Reformatory and reclamatory treatment, however necessary and valuable, does not go to the root of the matter, and will not eradicate hooliganism. preventive measures must more and more be adopted. Generally, whatever makes for social amelioration makes for the extinction of hooliganism, and the production of a law-abiding, well-behaved, self-respecting population. The following reforms, however, have a special bearing upon the social phenomenon which we have been Hooliganism will never disappear considering. until we have-

(1) An improved system of education which will aim deliberately at moral training, the disciplining of the will, the formation of character .- To secure this we could well afford to drop much with which the curriculum is at present overloaded. Boys especially are ruled by ideals, and we must instil into them higher ideals than that of the robber

knight and the pirate chief.
(2) Industrial training.—Much of our hooliganism is due to casual labour, blind-alley occupations, unemployment, and consequent street-loitering and larking. H. Dyer, a leading educational expert, truly says that

trilly says that
'one of the most important problems of the day is the deliberate
and complete organization of the whole field of boy labour, as it
is recognized that many of the most serious social problems
have their origin in the degeneration which takes place in the
years of adolescence 'Education and National Life, London,
1012, p. 77).

(3) Reter haveing—The pation is waking up to

(3) Better housing.—The nation is waking up to the need for the better housing of the poorer classes. So long as the children of the pour are deprived of the advantages of a true home life and home conforts, so long will hooliganism be a blot upon our civilization. That is part of the price we

must inevitably pay for our folly.

(4) Sufficient playgrounds.—Next in importance to a good home is a good playground. It is here that the modern city, in its shortsightedness and parsimony, has sinned most grievously against the child. All over the city, and especially in the poorer districts, there should be ample open spaces,

poorer districts, there should be ample open spaces, well-lit at night, where the abounding energy of adolescence may find safe and legitimate outlet. Let us not forget that 'Waterloo was won on the playing fields of Eton.'

(5) Helpful agencies.—Boys' Brigades, Life Brigades, Boy Scouts, and Lads' Clubs, with their educative, social, and recreative departments, are invaluable for the suppression of hooliganism. They fill the empty life with wholesome interests, and provide centres of fellowship and intercourse, and provide centres of fellowship and intercourse, where pure and uplifting friendships are formed. They furnish stimulating ideals, and appeal to what is high and chivalrous, the best side of the boy's nature. They also satisfy the gregarious instinct of yonth. It has been well said that we never see one boy, but always two or three. The gang spirit is deep and strong, and we must utilize it for the redemption of youth. Physical training is also of the utmost value, and many social reformers believe that universal military training would act as a powerful corrective to hooliganism. Finally, all cflorts will stop short of the highest and best which do not bring our youth under the sway of religious faith. That is the work of the churches. It is for them to see that our growing boys and girls are won to the service of Christ, who is the supreme maker of manhood and woman-

bood. LITERATURE. -G. Stanley Hall, Pouth, Chicago, 1906; R. A. Bray, The Town Child, Philadelphia, 1910; E. J. Urwick, Studies of Boy-Life, London, 1908; Jacob A. Riis. How the HOPE (Christian). - Hope is the name of a grace which is characteristic of the religion of the Bible. St. Paul sums up the misery of the Gentile world in a single sentence, when he speaks of them as ελπίδα μὴ εχοντες και άθεοι ἐν τῷ κόσμῳ (Eph 212). The Bible, on the other hand, is the book of hope. One strange book (Ecclesiastes) reflects the deep melancholy which was a pervading note of ancient literature; but hope cherished in the darkest times, hope continually kept alive by the labours of the prophets, hope of a future never abandoned and ever shining out anew in spite of every conceivable discouragement—this is the dominant note of the OT. Whatever is written therein was written for our learning, that through patience and through comfort of the scriptures we might have hope' (Ro 15'). The God whom the OT presupposes is 'the God of hope'—the Anthor and Giver of hope (Ro 15<sup>18</sup>). The 'hope of Israel' (Ac 28<sup>20</sup>; ef. 26<sup>6</sup>) might be understood in widely different senses. For St. Paul at stood in widely different senses. For St. Paul at least it included not only the complete fulfilment of the Messianic expectation in its widest sense, but the fulfilment of the true destiny of the individual in the glory of the resurrection life. To many modern Jews it may mean little more than the expectation of a brighter day for their oppressed and down-trodden nation—an expectation based on faith in God's justice and His unique relation to Israel. But in any case, hope—the boundless expectation of good—is the deepest note in the poetry and prophecy of the OT; in a transfigured form, corresponding to the light shed npon the purpose and character of God by the Gospel, it re-appears in the NT. (For the meaning and use of the word in the OT and NT it may suffice to refer to HDB, s.v.; and JE, s.v.).

Hope, like faith and love, is a Scriptural virtue. It cannot be said to have a place in heathen ethics. There are isolated passages in praise of hope. A fragment of Menander is quoted by Jeremy Taylor,

Life of Christ, pt. 3, § 15:

ἄνθρωπος ἀτυχῶν σώζεθ' ὑπὸ τῆς ἐλπίδος, and Enrip. Herc. Fur. 105 may be compared : οῦτος δ' ἀνὴρ ἄριστος, ὅστις ἐλπίσι κέποιθεν ἀεἶ, τὸ δ' ἀπορεῖν ἀνδρὸς κακοῦ.

Bnt heathen hope was low or aimless. 'Thon dost not hope,' says Augustine to the Christian, 'as the Gentiles hope.' 'Sperent illi inania saeculi, speres tn aeternam vitam cum Christo' (Serm. exeviii. 2). In both Testaments, indeed, the duty of hope is based on the revealed character of God: (a) as omnipotent and therefore able to fulfil His purposes, even against human expectation (Ro 4<sup>18</sup>); (b) as specially pledged to be the Saviour and Sanctifier of His elect people (Jer I4<sup>8</sup> 17<sup>18</sup> 50<sup>7</sup>, Ps 46<sup>2</sup>, etc.); (c) as the righteous moral Governor and Judge of mankind, whose ways are destined to be finally vindicated in spite of all the enigmas which burden the just man with a sense of unfathomable

The exact objects of hope differ to some extent in the two Testaments. The Anglican article (VII.) expressly denies that 'the old fathers did look only for transitory promises.' The hopes of merely temporal good, which were characteristic of prinitive men, were doubtless characteristic and purified by the discipline of calamity, so that hope itself became spiritualized (cf. Ps 63° 171° etc.). On the other hand, the gospel is the religion of the 'better hope' (He 71°), because it is the religion 'through which men for the first time enter into intimate fellowship

with God' (see Bruce, Ep. to the Hebrews, Edinburgh, 1899, p. 271 f.). Thus the hope of the Christian is a 'good hope' (2 Th 215), a 'blessed hope' (Tit 215), a 'hope of glory' (Col 127); a 'hope of righteonsness' (Gal 55), of 'salvation' (1 Th 58), of 'eternal life' (Tit 37). It is an expectation of spiritual blessings already realized and potentially conveyed to man in Christ. Nay, Christ Himself is 'our hope' (1 Ti 11), the living pledge that the divine promises of life, immortality, and glory will find their fulfilment for all who are lovingly united to Him. His resurrection is the ground of hope because it is an earnest of the fulfilment of man's destiny (1 P 12-21). So Aug. (c. Faust. xi. 8) strikingly says that the Christian expectation of future bliss and immortality in Christo iam non spes sed res erat.' The believer, he adds, 'in Christo iam habet quod in se sperat.' The present article will deal with the function of hope in the moral life of the Christian.

1. The object of hope is, of course, some form of future good, the true blessedness of which man is capable. The object of hope is the highest good—'bonum futurum, ardnum, possibile haberi' (Aquinas, Sum. ii. 2. xvii. resp.). This is described in various ways in the NT. In the Synoptic Gospels the summum bonum is the Kingdom of God or of Heaven; in the Pourth Gospel, eternal life; in St. Panl's Epistles, the right-cousness of God; in Hebrews, access to God and unrestricted fellowship with Him. All these are simply different descriptions of one supreme blessing, viz. that spiritual state which results from the very presence of God in the human spirit. In a true sense, then, God llimself is the supreme object of hope; 'bonorum summa Deus nobis est' (Aug. de mor. Eccl. 13; cf. de Trin. viii. 4. 6). God, says T. H. Green, 'is all which the human spirit is capable of becoming' (Proleg. to Ethics, Oxford, 1833, § 187). The final 'beatitude' for which we look is the reign of God in man, i.e. that perfection of our nature which results from His indwelling presence in man. 'Non alind aliquid a Domino Doe tuo speres, sed ipse Dominus tuns sit spes tua' (Aug. Enarr. in Ps. 39 [40]). So Aquinas, Sum. ii. 2. qu. xvii. art. 2, says: 'Proprium ac principale spei objectum est ipsa acterna beatitudo.'

2. We may next discuss the claim of hope to be a Christian virtue. We must remember that man's nature, being disordered by the l'all, can be restored only by an act of Divine power. The revelation of God in Christ, making known Ilis character, purpose, and requirement, necessarily affects the normal springs of human action. Thus, for a Christian the primary springs of action—the affections, appetites, passions, sentiments—yield to certain higher principles directly resulting from man's changed relation to God. These are the 'theological virtues,' Faith, Hope, and Love, so called because they bring man into a right relation to God and are Divinely communicated to him.' The Gospel revelation of God is, in fact, a new inspiration; it develops in man a new attitude towards God, and, consequently, a new disposition or character. It sets before him a new end or aim of action, viz. union with God. Hence the necessity of faith, which appropriates the revealed facts —the good-will and Fatherly love of God, the Divine victory over sin, the possibility of blessedness; of love, which responds to the goodness of God, and embraces in union with God the Divine aim of creation—an end which is wider than any merely personal good, and includes the well-being of others; and, finally, of hope, which, in reliance on the revealed character of God, looks forward with confidence to the fulfilment of the Divine

1 Aquinas, Sum. i. 2. qu. lxii. art. 1 resp.

pnrpose; which waits for the 'coming' of the Kingdom, for the perfection of which man's nature is capable, and for the complete manifestation of

God (Ro 52).

These three principles are inseparably connected (see Aug. Enchir. 8, on this point), and hope not less than the other two is a principle of moral action, acting directly upon the will (Aquinas, Sum. ii. 2. qu. x "iii. art 1 concl. '[Spes] in voluntate est nt in suo proprio subjecto'). It inspires endurance and self-control, stability and firmness. It colours man's intellectual outlook upon life. It hits the due mean between shallow optimism and pessimism. It fortifies the will and nerves it for the task of self-conquest, and for that 'patience' which, according to NT conceptions, is itself a form of moral energy, demanding the output of strength (Col 111). It is the chief element in perseverance. 'Spes facit Deo adhaerere . . . in quantum scilicet per spem divino auxilio innitimur ad beatitudinem obtinendam' (Sum. ii. 2. qu. xvii. art. 6).

obtinendam' (Sum. ii. 2. qu. xvii. art. 6).

Thus hope forms a great part of heroic virtne. It is related to faith 'as the energetic activity of life is related to life . . . Hope gives distinctness to the objects of faith '(Westeott on He 3°). Hence the heroes of faith in the Bible are also patterns of hope: Abraham (Ro 4¹8), the Psalmists, the Prophets, the Apostles, the martyrs and saints of the OT and NT (He 11; cf. Wis 3⁴, 2 Mac 7¹⁴, 2 Es 7⁵⁰, Bar 4²²). And, being a virtue, hope is accordingly a duty, and is a frequent topic of exhortation in both Testaments. (See esp. the First Epistle of St. Peter, 'the Apostle of liope,' and note the frequency of the word in the Pauline Epp. and

Alberews.)

3. The moral fruits of hope may be summarized as follows. (1) The joyous temper which St. Paul describes as 'joy and peace in believing' (Ro 15<sup>18</sup>), the confidence which springs from the assurance that God controls and overrules for good all that dismays or perplexes the soul, and that 'all things work together for good to them that love God' (Ro 82<sup>3, 50π</sup>. 12<sup>12</sup>, 1 Th 5<sup>16</sup>, Ph 1<sup>20</sup> 4<sup>4</sup>, He 3<sup>6</sup>).—(2) Perseverance in prayer. 'Without hope it is impossible to pray; but hope makes our prayers reasonable, passionate, and religious; for it relies upon God's promise, or experience, or providence, and story. Prayer is always in proportion to our hope zealous and affectionate' (J. Taylor, Holy Living, eh. iv. § 2).—(3) Patience and endurance in the duties and trials of common life. 'Patience worketh experience, and experience hope' (Ro 5<sup>3π</sup>.). The Bible is the book of hope, because it is a record of sufferings endured, surmounted, and overruled for good. The special value of the OT lies in the fact that throughout its pages the Hebrew mind is, as it were, being prepared for the appearance on the stage of human life of the Man of Sorrows. The Bible shows us the various methods by which man is disciplined for the service of God and humanity; it discloses in repeated instances 'the end of the Lord; that the Lord is very pitiful, and of tender mercy' (Ja 5<sup>11</sup>). In all these, hope finds its unfailing encouragement and support.

4. It remains to say something of the chief vices opposed to hope. The excess of hope, ill-grounded or immoderate confidence, is presumption. The promises of God, which constitute the ground of hope, are not unconditional. He has not, for example, promised forgiveness to those who persevere in sin or who cease from well-doing. Presumption may spring from pride—inordinate trust in one's own powers or in the mercy of God, that is to say, from an exaggerated estimate of self, or from a defective sense of the difficulty of goodness, or from that self-ignorance which induces us to forsake without necessity the ordinary path of duty, and so involve onrselves in self-induced difficulties.

Such conduct is contrary to the spirit of the pctition, 'Lead us not into temptation' (see W. H. Mill, Five Sermons on the Temptation, Cambridge, 1844, no. 5; Bernard, in Ps. 'Qui habitat,' Serm. xiv.), The remedy against presumption is the spirit of hnmility and holy fear, and attention to the warning implied in 1 Co 9266 1012, He 316-41 645, Jude (see Taylor, Holy Dying, ch. v. § 6; and Aquinas, Sum. ii. 2. qu. xxi.).

The defect of hope, on the other hand, is despair, which springs not necessarily from infidelity but from lack of confidence in God and servile fear. The Heb. verb for 'despair' (En') is an uncommon one (Ec 2<sup>20</sup>; see also 1 S 27<sup>1</sup>, Job 6<sup>25</sup>, Is 57<sup>10</sup>, Jer 2<sup>21</sup> 18<sup>12</sup>). The conception occurs in the NT only to be negatived (2 Co 4<sup>8</sup>; the exception in 2 Co 1<sup>8</sup> is, as the context shows, only apparent). Despair is, in fact, incompatible with the spirit of faith (2 Co 4<sup>18</sup>). It is, as Aquinas points out, a principle of sin (cf. Eph 4<sup>10</sup>), and that for three reasons. (1) Just as hope is based on a true conception of God's character, so despair results from a false and unworthy one, by which God is robbed of His due honour. (2) Despair acts on the will and leads to recklessness of living. 'Sublata spe irrefrenate homines labuntur in vitia et a bonis laboribus retrahuntur.' (3) Further, despair implies that 'aversion from the unchangeable good' which is the very essence of sin' If sin is the death of the sonl, despair is its descent into hell' (Isidore, qnoted by Aquinas, Sum. ii. 2. qu. xx. art. 3; cf. Aug. Enarr. in Ps. 144<sup>11</sup>). The causes of despair are various. Moralists

The causes of despair are various. Moralists specially mention two sins: luxury and 'accidie' (q.v.)—that spiritual sloth which robs a man of hope and so casts him down that he thinks the good unattainable. To these may be added the lack of gratitude for God's benefits, impatience, and culpable 'weakness of spirit' (Taylor, Holy Living,

ch. iv. § 2).

The remedies suggested for despair are at the same time means for sustaining or augmenting hope. Taylor advises (loc. cit.): (1) Soberness and moderation in our expectations, and consequent indifference to the changes and chances of human life. (2) Reflexion upon the character of God 'in whom there are all those glorious attributes and excellences which in the nature of things can possibly create or confirm hope'; the soul must contemplate the power of God and His fidelity to His promiscs. (3) Recollection of Christ's travail for our redemption, as witnessing to the infinite willingness of God to save and pardon. In this connexion Augustine (in Joan. Evang. tract. xxxiii. 8) refers to Ezk 18<sup>27</sup> as a text of comfort for the despairing. (4) Remembrance of the past mercies of God, and of His providential care for the soul. This is implied in St. Paul's words, 'experience worketh hope' (Ro 5<sup>3</sup>). To these may be added (5) the abiding and continuous spirit of penitence—contrition for sins already forgiven and often repeated acts of repentance. 'Spes sua cuique est in conscientia propria, quemadmodnm se sentit ad dilectionem Dei et proximi cognitionemque proficere' (Aug. de Doct. iii. 14).

R. L. OTTLEY.

HOPE (Greek and Roman).—The etymological association of  $\epsilon \lambda \pi ls$  with voluptas, 'pleasure,' 'will,' 'desire,' is perhaps illustrated by Pindar, Pyth. ii. 49; but the neutral meaning 'expectation,' whether of good or evil, common from Homer to

Herodotus, is still for Plato the normal one (Laros, 644 C [which Liddell and Scott, s.v. ελπίς, II., mismnderstand] and Philebus, 39 E). The verb throughout Homer seems to mean 'expect' or 'deem'; the noun occurs twice in the Odysscy (xvi. 101 and xix. 84), in a formula, in the sense of 'hope.' There is no personification of hope in Homer.

In the myth of Pandora (Hesiod, Works and Days, 96), Hope remains in the jar when other evils have flown forth and been dispersed among The natural and traditional interpretation of this is that hope stays with man as his sole consolation (Campbell, Pleasures of Hope, i. 30-40; Shelley, Masque of Anarchy, xxii.-xxiv.; Cowley, The Mistress). On this view the jar contained a mixture of good and evil, corresponding vaguely to the two jars in the Homeric apologue (Il. xxiv. 527-533). Further confirmation is found in a fable of Babrius (58), in which the jar contains only blessings, hope remaining when the others are dispersed and lost. But, if we may press the logic of a myth, it can be plausibly argued from the phrase 'other evils' that hope too is an evil.\(^1\) It is the delnsion which, in Cowper's words (Hope, 153), 'sets the stamp of vanity on all, That men have deemed substantial since the fall,' and there is abundant confirmation of this view in the many passages of the moralizing poets which warn the too easily elated Greek against the special danger of his temperament, 'the chase of a cheating prey with hopes that shall never be fulfilled' (Pind. Pyth. iii. 23). Another ingenions mediating interpretation makes the blessing to consist in the absence of hope in the sense of foreknowledge of fate. This would do for humanity what the Prometheus of Æschylus (Prom. Vinct. 250) boasts that he did by implanting in them 'blind hopes that they might hide with thin and rainbow wings the shape of death' (Shelley, Prom. II. iv. 62). (O. Gruppe [Gr. Mythol. und Religionsgesch., Munich, 1906, p. 1025 n. 1] is inexact in saying that  $\partial x = \partial x = \partial x$  is an evil in Æschylus; and Walz's eitation of Persæ, 803, is equally irrelevant. So in Pindar, 1sth. ii. 43.  $\partial \theta \partial x = \partial x = \partial x = \partial x$ Isth. ii. 43, φθονεραί . . . ελπίδες, which means merely the hopes of envious enemies, is misunder-stood by Schmidt and many others.) The question stood by Schmidt and many others.) has been much debated of late, but there is little prospect of agreement (see Paul Girard, 'Le Mythe de Pandore,' REG xxii. [1909] 217 ff., and Walz, 'A propos de l'Elpis hésiodique,' ib. xxiii. [1910] 49-57). There is no interpretation of the myth that will satisfy all requirements of a captious logic. Why, for example, should Zens in the accomplishment of his revenge wish to console accomplishment of his revenge wish to console mankind? And how, on the other hand, can in the one ease the escape from the jar and in the other the remaining behind in it consistently symbolize the presence with mankind of a blessing or a bane?

In post-Hesiodic literature we may distinguish, though we cannot keep apart, (I) the idea already glanced at that hope is an illusion and an evil; (2) the topic of the better hope of the initiated or the good; (3) the anticipation of such modern ideas as the duty of hopefulness; (4) the personification

of hope.
(1) 'Creatures of a day,' says Simonides of

Amorgos (i. 3-7),

'They live like cattle, knowing not how God Shall hring each thing to its appointed cnd. But Hope and sussive confidence maintain The agitation of their vain desires.'

(See on this Wilamowitz, Sappho und Simonides, Berlin, 1913, p. 272 ff.)

1 By the Sanskrit poets hope was classed among the evils which the true sage must renounce to secure perfect tranquillity of mind (cf. Böhtlingk, Ind. Sprücke<sup>2</sup>, St. Petersburg, 1870-73, nos. 1046-52, 1477, 2448, 2609).

Solon re-echoes the thought (xii. (iv.) 33 ff.): 'We mortals think alike, the good and had : Anticipation maketh all men glad, Till cvil strikes, then we deplore our fato Who gaped on airy hopes in vain clate.'

This general moral he applies to every trade and vocation in turn, in illustration of the ample proposition that hope makes in all designs begun

proposition that hope makes in all designs begun on earth below' (Shakespearc, Troilus and Cressida, I. iii. 3). In similar vein, Theognis writes (637):

'Hazard and Hope, two cruel gods are they,
Who equally on all mankind do prey,
Men's fortunes prosper oft beyond their thought
And hope, and oft good counsel comes to naught.'

After Theognis, Pindar (Nem. xi. 46) and the
dramatist (Soph. Antig. 616; Eurip. Sup. 479)
take up the parable. Thneydides incorporates it
in his cynical philosophy of human motives (see in his cynical philosophy of human motives (see P. Shorey, Transactions of Amer. Phil. Assoc., vol. xxiv. [1893] p. 71; F. M. Cornford, Thucydides Mythistoricus, London, 1907, p. 167 f.). 'Hope easily led astray' is one of the elements of which the mortal soul is compounded by the divinities that came to the making of man in Plato's Timeus, 69 D, and hope is a motive of crime in Antiphon (fr. 58, Diels) and Democritus (fr. 221).

This is the prevailing tone. But, of course, hope is also described as a blessing and a consoler, and there are parallels with most familiar quotations, from Pope's 'Hopesprings eternal' (Theognis, 1135) to Gay's 'While there is life there is hope' (Theoc. iv. 42), and Prior's 'For Hope is but a dream of those that wake' (Pindar, ap. Stob. Flor. 111. 12). Æschylus' Exiles feed on hope' (Ag. 1668) became a proverb. (For a collection of commonplaces, see Stob. Flor. 110 ff.; C. F. Nägelsbach, Nachhomer. Theol., Nüremberg, 1857, p. 383 f.; L. Schmidt, Ethik der alten Griechen, Berlin, 1882, ii. 70-75.)

(2) The better or fairer hope is almost a technical term for the assurance of a blessed immortality which the mysteries brought to the initiated (see C. A. Lobeck, Aglaophamus, Königsberg, 1829, i. sect. 11, pp. 69-73; Pindar, in Plato, Rep. 331A, and Plato, Phædo 63 C, where Burnet comments, Elpis is Orphic for faith'). This better hope extends to worldly prosperity also, and is sometimes the reward of moral and not merely ceremonial purity (cf. Isocr. iv. 28 with viii. 34-35, i. 39, and xv. 322). In Antiphon, vi. 5, it is a sanction of the oath and of the righteous admini-

stration of justice.
(3) The friendly exhortation not to despair but to eling to hope (Soph. Trach. 125) passes by insensible transition into the affirmation of the duty of hopefulness (Pind. Isth. vii. [viii.] 16; Enr. Herc. Fur. 105; Horace, Od. II. x. 13). The transition and the blending of the idea with the better hope of the righteous appears in a notable passage of Plato's Laws (732 C). More simply Demosthenes (de Cor. 97), in an often imitated passage, declares

to the Athenians:

'Good men should attempt all honourable things, casting before them good hope as a shield and bearing bravely what God gives.' Similarly Menander (fr. 572, Kock):

When thou dost well, thrust forth to cover theo Good hope a shield, in confidence that God To righteous boldness lends a helping hand.

But there is a wide gap between these sayings and Emerson's optimistic Americanism: 'We judge of a man's wisdom by his hope.' To Epietetus (fr. exlv., Didot) and Democritus (fr. 185, Diels) is attributed the saying that 'The hopes of the educated are better than the wealth of the ignorant.' The saying, 'The hopes of right-thinking men are attribuble those of the foolish thinking men are attainable, those of the foolish not' (Democr. fr. 58, Diels), may be ultimately derived from Plato's Philobus, 40 A-B.

(4) Hope is freely personified in Greek poetry, and Clytemnestra's 'My hope shall never tread

the halls of fear' (Æsch. Ag. 1434) is as bold as Lady Macbeth's 'Was the hope drunk, whercin you dressed yourself?' Hope is represented on a marble vase in Rome and on coins, holding a branch in the left hand and a pomegranate flower in the thumb and first finger of the right, the symbolism of which is doubtful (see Roscher, s.v. 'Nemesis,' and Müller-Wieseler, Denkmäler der alten Kunst, Göttingen, 1835-81, ii. fig. 670). But there is no evidence of an actual cult in Greece. Theognis' admonition to pray to Hope first and last (1146) proves as little as the association, in Anth. Pal. ix. 146, of Elpis with Nemesis, or with Tyche in Anth. Pal. ix. 49 (cf. Roman Sepulchral Inscriptions, xi. 6433) and 134, or the plural Elpides in Anth. Pal. x. 70 and vii. 420. Any half-personified abstraction may be a 'god' in Greck poetical rhetoric from Euripides down.

It is otherwise with the Roman Spes, to whom a temple was erected in the Roman Spes, to whom a temple was erected in the forum holitorium in 258 B.C., and who perhaps had a still earlier worship indicated by the term Spes Vetus, referred to a district near the Porta Labicana. She first appears in literature in Plantus (Cist. 670, 'Spes sancta'; cf. Bacch. 893, Pseud. 709, Merc. 867, Rud. 231). The theory of Preller that she was originally a garden-goldess, the furner's hope originally a garden-goddess, the farmer's hope of harvest, is rejected by Wissowa and Axtell (Deification of Abstract Ideas in Roman Literature, Chicago, 1907, p. 18). Whether the more specific Bona Spes is an essential part of the conception, or a later development, or a mere literary epithet, is open to debate. She was worshipped at Ostia and Aricia by the Emperors, and appears once in the prayers of the Arval Brothers. The Romans made more of the cult of personified abstractions than the Greeks, but even in Latin literature the line is hard to draw. In Horace (Odes, 1. xxxv. 21) and Tibullus (I. i. 9, and II. vi. 20-28), there is little to choose between poetic personification and cult. The insistent repetition of the name at the beginning of the line in the Tibullus passage may be nothing more than a literary motif common in Latin elegy, and traceable as far back as the speech of Nestor in *IL*. xxiii. 315 f.

The relation between these Greek and Roman ideas and the Christian virtue of hope does not seem to have been adequately studied. It is sometimes stated that the symbolism of the anchor of hope is classic. But the auchor on Greek coins does not appear to be associated with hope, and the association in Greek poetry is rare. In Aristophanes, Knights, 1244, 'the frail hope on which we ride' is apparently a raft.

In Æschylus, Ag. 505, 'when many hopes are broken' or torn away, the scholiast says that the

broken' or torn away, the scholiast says that the metaphor is from an anchor. Epictetus said (fr. xxx., Schenkl), 'We should not moor a ship from one anchor, or life from one hope.'

LITERATURE. -This is given in the article.

PAUL SHOREY. HOPI.—A body of American Indians, numbering 2218 in 1912 (as compared with 1839 in 1896 and 1878 in 1904) and occupying, within a reservation of 2,472,320 acres in N.E. Arizona, the six pueblos of Walpi and Sichumovi on the 'East Mesa,' Shongopovi, Mishongnovi, and Shipaulovi on the 'Middle Mesa,' and Oraibi on the 'West Mesa,' to which must also be added the Tewan pueblo of Hano, a little N. of Sichumovi. Practically the sole way of the region is the one herewith cally the sole map of the region is the one herewith reproduced from JAEA iv.
The language of the Hopi belongs to the Sho-

shonean stock; yet in their ritual many Keresan words occur, and Zuñian influence is potent, while

1 Special abbreviatione employed in this art.: AmAn= American Anthropologist; FCMAS=Field Columbian Museum, Anthropological Series; JAEA=Journal of American Ethno-logy and Archæology.

there are marked analogues with Nahuatl culture. The composite character of the Hopi is also substantiated by their legendary history,

represents different portions as coming from widely

separated parts of the country.

The term 'Hopi,' which these people prefer, and which alone should be applied to them, is a contraction of *Hopitáh*, 'peaceful ones,' or *Hopitáh-shinumáh*, 'peaceful all people'; and the common appellation of *Moqui* (with many variant spellings), which means 'dead' in Hopi, is an offensive misnomer.

As a tribal name Moqui 'is seemingly of allen origin and of model tribal name Moqui 'is seemingly of allen origin and of model tribal and in Acona, Motel in Sia, Cochibl, and o's "Mohace" and "Mohoce" (1583) and Onate's "Monoqui" (1598) '(Fewkes, HAI i, 560). They are known to the Apache also as Earke ('live high up on the mesas'), and the Zuni sometimes derisively call them Amukwikwe ('smailpox people') and Ilapeka ('excrement people'). The name for their country is Tusayan (Apache, 'place of isolated buttes'; for further synonyms, see Fewkes, op. cif. 567 th.) 567 1.).

1. History. — The districts from which the phratrics came were, according to Fewkes (19 RBEW, 582): Tokonabi (S. Utah)—Chua, Ala; Palatkwabi (S. Arizona) and the Little Colorado Patung, Lengya (?), Patki, Knikuch, Piba, Tuwa, Tabo; the Muiobi (Rio Grande valley) and New Mcxican pueblos (Zuñi, Acoma, Jemez, etc.)—Honau, Kokop, Pakab, Asa, Buli, Honani. The order in which these clans reached Tusayan is very nncertain (Fewkes, 19 RBEW, 585 f.; for the native traditions, cf. the very full account by Stephen, ap. Mindeleff, 8 RBEW, 18 ff.; also Voth, FCMAS viii. 22 ff.), but perhaps the most reliable summary is that of Fewkes (AmAn, new series, ii. 694 f.).

Of the existing Hopi pueblos, Walpi, Shongopovi, Mishongnovi, and Oraibi (the Oraibi colonized from Shongopovi) were established before 1629; Sichumovi (colonized from Walpi) and Shipaulovi (colonized from Walpi and Mishongnovi) were founded about 1750; and Hano was built early in the 18th cent. (Fewkes, AmAn vii. 414, and 19 RBEW, 581 f.; see, further, *HAI* ii. 901, 553 f., i. 871, ii. 142 f., 564, 551, i. 531). The inhalited pueblos are elaborately described by Mindeleff (8 RBEW, 61-79), who also describes the ruins of Old Walpi, Old Mishongnovi, Shitainiu, Awatobi, Kokopki (called by him 'Horn House'), Chackpahu (called by him 'Bat House'), Kawaika (called by him Mishiptonga), Moen-kapi, Kwaituki, Tehugkihu, Chukubi, and Payupki (op. cit. 45-60; for the tradition regarding Payupki, see Stephen, ap. Mindeleff. 40 f.). Mindeleff, 40 f.).

These are only a few of the ruined sites, and to them may be added Chubkwichalobi, Honanki, Kachinba, Kisakohi, Kukuc-

<sup>1</sup> The spelling of Hopi names is by no means uniform; in the present art. the vowels have their Continental value; u=u in 'but'; p and b, and t and d, are indistinguishable; tc=ch in 'chink'; n=n in 'finger'; c=sh in 'shall';  $q=German\ ch$ . 2 For the Hopi tradition of 'be destruction of Palatkwabl, see Voth, FCMAS viii. 43-63.

3 On this clan, traditionally said to be Tewan in origin, and to have migrated to Zunii and thence to the Hopi, being one of the components of the population of Awatobi, see Fewkes, AmAn, new ser., xii. 576-594.

homo, Lengyanobl, Lululongturkwi, Tukinobi, Wukoki, and Wukopakabi; as well as the legendary sites of Etipsikya and Hushkovi, and viliages mentioned by the early Spanish writers, such as Cuarrabi and Quiana (cf. HAII. 293, 559, 633, 703, 733, 764, 778, ii. 834, 976, i. 442, 551, 369, ill. 339, and the references there given). Mindeleff (19 RBEW, 644) doubts whether any of the ruins of Tusayan are more than 400 years old.

In 1774 or 1775 the Hopi population numbered, according to Fr. Escalante, 7494, of whom two-thirds were at Oraibi; in 1780 they had been reduced by famine to 798. In 1850, M'Call estimated their number at 2450 (Bancroft, Hist. 261, 266, 462, note 28). The first visit after the American occupation of Arizona was by Ives in 1858, and in occupation of Arizona was by Ives in 1868, and in 1869 an Indian Agency was established for the Hopi. See Fewkes, in *HAI* i. 560-562; Bancroft, *Hist.*, esp. 46 f., 87 f., 154, 173, 201, 221 f., 225-230, 234, 239, 246, 256, 349, 363-367, 391-398, 547 f.

2. Culture and organization.—The Hopi are

essentially agricultural, and, at least in its preseut form, their religion centres in the need for rain and in ceremonies designed to promote the growth of the harvest. It is maintained by Fewkes (AmAn) ix. 172) that, the further back they are traced, the closer is their resemblance to the general culture of the so-called cliff-dwellers (cf. ERE i. 685°), and their history indeed suggests, in its stories of the moving of pueblos from low ground to the tops of the mesas (as after the massacre of the Spanish priests in 1680), the way in which the cliff-dwellings came to be constructed. The pueblos themselves (on which cf. ERE, loc. cit.) are, as Mindelett points out (19 RBEW, 639 ff.), essentially a product of the plateau eountry into which the migrations of the Hopi led them. They learned the custom of storing grain to provide both against drought and against the forays of hostile tribes, such as the Apache and the Ute, and this forced the small villages to amalgamate, at first on the foothills, and later on the summits of the mesas. Yet the necessities of continued agriculture-or, rather, horticulture—obliged them to construct summer villages near their fields, a notable example being the present village of Moen-kapi, about 40 miles N.W. of Oraibi (see Mindeleff, 8 RBEW, 77-79).
Within the villages the Hopi are divided into

'clans,' or wingwu, these being descendants of sisters; and into groups of wingwu from the same female ancestor and possessed of a common totem. or myúmu (Stephen, ap. Mindeleff, 8 RBEW, 16). The whole Hopi system is, as will be seen (below, § 4), matriarchal, and the form of the Hopi pueblo is materially affected by this fact. Accordingly,

as Mindeleff notes (19 RBEW, 647),

as Mindeleff notes (19 RBEW, 647),

as the men who are adopted into it by marriage take up their quarters in the family home and children are born to them, more space is required. But additional rooms, which are still the family property, must be built in the family quarter, and by a long-established rule they must be built adjoining and connected with those already occupied. Therefore in each village there are constant changes in the plan; new rooms are added here, old rooms abandoned there. . . It is not unusual to find in an inhabited village a number of rooms under construction, while within a few steps or perhaps in the same row there are rooms vacant and going to decay. Since, moreover, care is taken, when first laying out the pueblo, to secure sunny exposures for entrances and terraces, as well as protection against cold and wind, the general growth of the pueblos has been N.W. or S.E. (Fewkes, AmAn, new series, vill. 83 ft.).

In the building of the houses all the heaviest work is done by the men, but the women normally

work is done by the men, but the women normally do the plastering and all else that their physical strength allows, both in the houses and in the kivas, or chambers for ceremonial gatherings and the general purposes of a club-house (Mindeleff, 8 RBEW, 100 ff., 111 ff., where the simple rites

connected with building are also given).

An instrument peculiar to the Hopi among the American Indians is the putshkolu, or 'rabbit stick' (represented in the accompanying cut from a specimen in the collection of the U.S. Government), which

is delivered in the same way as the Australian [boomerang], and its course after it strikes the ground often brings it to the right or left of the thrower and nearer to him than the farthest point reached in its flight. It makes one or more revolutions in its flight toward a rabbit, and if it does not strike the animal directly, its rapid gyration when it touches the

ground makes probable the hitting of any object within several feet. So far as is known this is the only aeroplane club used in America. The material is Gambell's oak (Quercus gambelit), and a branch of the proper curve is selected for its manufacture. One end is cut to form a handle, and the club is usually varnished with resin and painted with an invariable design in black, red, and green. Of late years a rabbit figure is frequently painted thereon. The weapon has a religious significance, probably arising from its use in ceremonial rabbit buuts' (Hough, HAI ii. 348). The putshkohu constitutes part of the equipment of the Makto and Tcilikounato kachinas (Fowkes, 21 RBEW, 113, 116, plates xlix, li.).

3. Birth, naming, and initiation.—The parturieut mother is usually attended by her mother (or, if her mother is dead, by her aunt or other femalo relative), who is not, however, generally present during actual parturition, except in a case of difficult labour or the like. The inther likewise remains away under ordinary circumstances. After the child has been born, its head and the head of the mother are washed with amole suds, and the infant's body is rubbed with ashes, after which an ear of maize is placed in its cradle to guard it. The care of the new-born child devolves mainly upon the paternal grandmother (or, if she is dead, upon her sister or other female relative on the father's side), and until the 5th day the mother must not see the sun or receive any solar light. On the 5th day the washing is repeated, as well as on the 10th, 15th, and 20th. During this period the mother may eat no meat or salted food, and all sastenance must be prepared, at least in part, with a decoction of juniper leaves; and for these 20 days the mother is, furthermore, forbidden to be barefoot. Shortly after birth four horizontal lines are drawn upon the wall of the room, these being called the child's 'house,' and ou each of the days of washing one of these lines is solemnly effaced-a ceremony whose real meaning is still unknown 2-and is offered to the rising sun with a prayer for old age.

The 20th day marks the purification of the mother, the naming of the child, and its presentation to the sun. Ou this day both mother and child are again solemnly washed, the former also being obliged to stand over a steaming vessel into which juniper is thrown, thus receiving the final purification. The bowl with its contents, together with sweepings and everything connected with the mother during her ritual impurity, is then thrown away without ceremony. The afterthen thrown away without ceremony. The after-birth, which has been kept until this time, is sprinkled with sacred meal, a feather is added, and the whole is rolled together, waved over the mother's head, and carried away to be shaken out or buried by the paternal godmother. When the latter returns, she rubs the mother's arms, neck, and face, and the child's face (on the Middle Mesa she takes ears of maize and makes four passes over the front of the child, without touching it, from head to foot), and with prayer-meal and ears of maize she makes some such prayer as, 'May you live to be old, may you have good maize, may you keep well, and now I name you N.' All the other

1 On kachinas see artt. Calendar (Americau), vol. iil. p. 67, and Drama (American), vol. iv. p. 871 f.

2 It may be queried whether these lines do not represent the four 'houses,' or stages, of the Hopi creation legends. On the child's 'bouse,' see Yoth, FCMAS vi. ii. 49.

women belonging to the father's clan do likewise, one of the many names thus given being finally selected to be borne until initiation into one of the The child is now placed in its eradle, fraternities. and, when the father (whose presence or absence during these ceremonies has been immaterial), announces sunrise, the infant is earried by the godmother, escorted by the mother, bearing prayer-The face of the child is uncovered, and the godinother and mother pray over the meal and cast it towards the rising sun (on the Middle Mesa the godmother plants two bahos [on which see below, § 11]—one for the mother and one for the child).

Meanwhile, provision has been made for a feast, in which nugkwibi (stew of mutton and shelled maize) and pikami (sweet mush) are indispensable. The first morsel of each food is given in sacrifice to the sun, and the child then receives a small bit. After the feast, when the mother has returned a larger portion of maize meal than was given her for her child, the guests return to their own homes.

About the age of eight or ten, children undergo what may be the survival of an initiation rite. the course of the Powamû eercmony the children are led into the presence of the two Tuñwup kachinas either by their mothers or by their godfathers (godmothers in the ease of girls). The children, who carry ears of maize, a handful of prayer-meal, etc., are then flogged by the kachinas with yucea whips, the boys severely, the girls more gently. After them the godfathers (but not the godmothers) are whipped, and then men with various ailments. Previous to this whipping the children have believed that the kachinas are real; after it they know that they are in reality only personations (Fewkes, 15 RBEW, 283-285, 21 RBEW, 36, 69; Voth, FCMAS III. ii. 103 f.).

Children are initiated into the various fraternitics at about the age of fifteen or eighteen, and they then receive the names by which they are permanently known (for the initiation rites of permanently known (for the initiation rites of the Antelope fraternity, see Fewkes, Stephen, and Owens, JAEA iv. 62-65). 'All Hopi proper names have some reference to the name of the Name Giver, never, unless ecincidently, to the clan totem of the Bearer of the name' (Voth, FCMAS VI. iii. 68). The real meaning of these names varies according to the clans which give them; and, even when the meaning of the individual components of proper names is known, grammatical vagueness often renders precise determination of the meaning

of the whole very doubtful.

4. Marriage. — The matriarchy of the Hopi comes strongly to the fore in their marriage customs. The choice of partner usually depends upon the youth and maiden concerned, but the actual proposal is generally broached by the girl or by her representatives. Gifts are exchanged, but there is no marriage by purchase. Marriage is rare in summer or late spring, but is common in autumn or winter, when agriculture is at a standstill. Escorted by her mother (or, if she is dead, by her aunt), the girl goes to her future husband's house, where she grinds maize for three days, during which time she is expected to talk as little as possible. On the morning of the fourth day the heads of the pair are washed by their respective future mothers-

pair are washed by their respective future mothers-in-law, after which they pray, casting the sacred meal towards the dawn. After a wedding breakfast a mixture of lime, black stuff, etc., is thrown 1 At Oraibi, after this first washing separately, 'usually the hair of the young couple is then washed thoroughly together in each bowl, and this hair washing, and especially the washing of the two heads in the same bowl, is said to be the "crueial nument" in which the two are supposed to "become one" (Voth, FCMAS xi. il. 148; in one instance observed by Voth the groom refused to have his head washed, this fact giving rise to jocular doubts whether he could be regarded as really married).

at one another by the older female relatives of the pair, especially of the bride, and by the father of the groom, this solitary representative of the sternor sex soon having the worst of the encounter. A few days later it is announced that the cotton for the bride's garments is to be spun. This work is performed by the men in the kivas, their food being cooked by the women in the bride's house. Her costume itself is made by the groom, assisted by his male relatives, especially the father. After it is completed—a task that may require several weeks-the bride, whose hair has meanwhile been dressed in the married women's style of two coils hanging down in front instead of the girls' side whorls in imitation of squash blossoms, returns to her mother's house, whither she is followed, during the day, by her husband. She is required to give his family a large compensation, usually in ground maize. The newly wedded pair live with the bride's mother until they can provide a home of their own. When sick, the groom returns to his mother's house, and he is even frequently regarded as an outsider in his wife's home. Among the Hopi pre-nuptial life is usually chaste, but, though unchastity is disapproved, it is condoned if marriage follows. If, however, illegitimate children are born, they enjoy the same legal status as others, in consequence of the matriarchal system

in vogue among the Hopi.

The average Hopi family consists of 5.5 persons, and the population is gradually increasing; sterility is somewhat rare; eases of voluntary abortion are not unknown (A. Hrdlička, *Physiological and Medical Observations* [=Bull. 34 BE], Washington, 1908, pp. 42 f., 6, 52, 164). A remarkable pathological feature is the prevalence of albinism. which is restricted almost entirely to the Hopi and the Zuni, the proportion among the former being 5.5 per 1000, and no marked increase or deercase being perceptible. Although albinos are not despised, and may marry those of normal colour, they themselves are very sensitive. Their marriages are frequently barren or their families are unusually small (ib. 191 ff.); and it is believed that albinism may be a punishment for the mother's violation of some tabu (54). According to the report of Dr. Jacob Breid, dated 4th Feb. 1905 (reproduced by Hrdlička, Table 9), out of a Hopi population of 1878, there were then 5 cases of company of the state of plete albinism for each sex (2 each of children and 3 each of adults), 4 of goitre (female adults), 2 of epilepsy (1 child of each sex), 4 of idiocy for each sex (3 each of children and 1 each of adults), 1 deaf and dumb female child, 5 cases of spinal curvature (3 males and 2 females), and 67 of tuberculosis—24 pulmonary (males: children 3, adults 9; females: children 4, adults 8); 26 of bones and joints (males: children 10, adults 5; females: children 8, adults 3); 17 glandular (males: children 4, adults 1; females: children 8, adults 4).

5. Burial.—The hair of the corpse is washed and dressed; the chin and the lower checks are painted black; the brow is bound with a cotton cord; the black; the brow is bound with a cotton cord; the face is covered with a rain-cloud masque; the body is bent together, tied, and wrapped; and prayer-sticks are placed in the hand. There is erying and mourning after death, but no screaming or loud lamenting, although there is wailing during the washing of the body and on anniversaries of the death, professional mourners being not unknown (A. C. Fletcher, in HAI i. 952). The adult dead are buried at night or early morning in a sitting posture, facing the east, in graveyards on sitting posture, facing the east, in graveyards on the slope of the mesas or of hills near them, or they may simply be laid in crevices in the rock; the former is the normal practice at Mishongnovi and Oraibi, the latter at Shongopovi. The soul is afforded communication with the outer world by

stick touching the body and projecting above the ground; and dishes, often filled with food, as well as a few pctty ornaments, are placed by the grave, which usually has some mark indicating to what fraternity its occupant helonged. The graveyards are utterly neglected. The faces of children dying before initiation into any of the fraternities are not painted, nor do their foreheads have the cotton cord. Their hodies are thrust into rock-crevices.

On the 3rd day after death the last food- and prayer-offerings are prepared for the dead. The latter consist of a double green baho, a single black baho (the chochokpi, or 'seat'), an eagle breath-feather (the pühu, or 'road'), and about six nakvakvosis (a sort of prayer-bearer). The 'road' the father, hrother, or uncle of the deceased

ceased

places on the ground west of the grave, the thin string pointing westward. From this road he sprinkles a meal line westward denoting the continuation of the road. According to a helief of the Hopi, the hikvsi (breath or soul [on which see below, § 15]) of the deceased ascends early the next morning from the grave, partakes of the hikvsi of the food, mounts the hikvsi of the seat, and then travels along the road to the masski (skeleton house), taking the hikvsi of the soulhs haho along as an offering. In the case of the death of a small child that has not yet heen initiated into any societies, the road is made from the grave towards the homes of the child, hecause it is helieved that the soul of that child returns to the house of its parents and is reincarnated in the next child that is horn in that family. Until that time the little soul is helieved to hover over the house. It is said that when an unusual noise is heard in the louse, for instances a crackling in the roof, they think the little soul is moving ahout, and the mother then often secretly deposits a pinch of food on the floor in some part of the house for her departed child. When I asked one time what hecame of that child-soul in case no further birth took place in the family, I was told that in such a case the soul remained near the house until its mother died, who then took the little soul with her to the other world '(Voth, FCMAS xI. ii. 103).

6. Religion: general character; ancestorworship.—Hopi religion is hroadly characterized by Fewkes (JAFL xi. 180 ff., 19 RBEW, 625) as based on a composite totemism overlaid with rites for rain and eorn, the two prime necessities of the arid environment. There is also some trace of a form of ancestor-worship in so far as the dead are apparently represented by the gnclüpki, or crooks, placed ahout the altar of the Antelope fraternity—the shortest being for the oldest, since old age is most bowed—and the use of the gnclüpki by the supervisor of snake-racers may have a similar implication (Fewkes, Stephen, and Owens, JAEA iv. 23, 75; Voth, FCMAS III. iv. 311). Again, at the feast connected with the Hnmiskachina and Nimankachina one of the kachinas, who are also connected with the ancestor-cult, collects from the howls of food given by each woman a pinch of every sort, this being placed in a shrine in a rock-crevice 'as food for the "early dead" (Fewkes, JAEA ii. 43); while during the building of a house the future owner takes some food and places it in a niche of the unfinished wall (Fewkes, JAFL x. 198 f.).

7. Sympathetic magic.—All Hopi ritual is permeated with the concept of sympathetic magic. Fewkes observes (AmAn, new series, iii. 211) that every Hopi clan owns sacred objects which 'are thought to possess magical powers by the use of which the priests can obtain sacred results, are almost universally totenic, and are intimately connected with the ancients, the worship of whom runs through all Hopl ritual.' Hs happily compares these objects—called twimi—with the Australian churinga (on which see ERE il. 2449). When the clans combined, the wimi passed into the possession of priest fraternities, and are revered by several clans, although still owned by the descendants of the clans which introduced them.

Fowkes also suggests that in the dramatic attack npon the bearers of the sun-shield in the Soyaluñya rite there is a representation of an onslaught on the sun by hostile powers, and that the purpose of the dramatization is to draw back the luminary from its threatened disappearance (15 RBEW,

271 f., AmAn xi. 102). In like manner the drenching with water and filth in the course of the Wüwüchimti ceremony is probably a rain-charm (Fewkes, Proc. Boston Soc. of Nat. Hist. xxvi. 436, 448). Again, smoking is

448). Again, smoking is

'a cercmonlal religious custom; the pips is the O'mow-uh (cloud-god), and the smoke the rain cloud.' 'The smoke carries the prayer from the chief; it transfers the wish of the smoker to the object; moreover, it is a cloud, and is symholically efficacious in hringing that which clouds producs—rain' (Fewkes, JAEA il. 124, AMAn, new series, iv. 504, note 2; cf. ili. 222, 445). Moreover, as Fewkes says (AmAn x. 144), 'the most prominent symhols and figurines on several Tusayan altars of widely different societies refer to the sun, rain-clouds, and the fertilization, growth, and maturity of corn. Masked performers represent supernaturals connected with the production of the latter. The ceremonial acts shout the altars or in the public exhibitions have one intent, to affect the gods who control these necessities. In their complicated rites the priests believe they can do this hy reproducing ancestral ceremonies, and are guided in their presentation by current legends. Personifications, masked or unmasked, are therefore introduced that the performance may be more realistic—a more accurate reproduction of the ancient.' The whole principle of the Hopi altar' is hased upon this concept of sympathetic magic (see ERB i. 830). Women do not enter the kivas except to renovate them annually at the Powama, and in the course of some of the other festivals when their presence is necessary (Mindeleff, & RBEW, 129, 134).

8. Mythology.—It is scarcely possible, in one

8. Mythology.—It is scarcely possible, in one present state of knowledge, to give any list of the worshipful beings of the Hopi. We have, for instance, Cotokinuñwû ('Sky-heart'), this being also the Hopi name for the Christian God (l'ewkes, JAFL xv. 24, note 2; on the possible influence of Christianity upon the concept of Cotokinuñwû, see Fewkes, Proc. Boston Soc. Nat. Hist. xxvi. 445); Müyinwû, the god of growth; Omowûh, the raingod of the cardinal points; Palülükoñ, the l'lumed Serpent; the war gods Püükoûhoya and l'alnûahoya; Masauû, the god of the under world; Kokyānwüqti, the Spider-Woman; Huzrüwüqti, the 'Woman of Hard Substances'; Habaiwüqti, the Old Woman, etc. Yet, as Fewkes declares (AmAn, new series, iii. 214),

(AmAn, new series, iii. 214),

'although apparently very complicate' The sample, as not of the names of Especially is this true of the Sky and which are numerous and perplexing. 'that every clan had its own name for each of these geds, and it is this multiplicity of names which makes a proper identification very difficult. Every clan had a great Sky god and an Earth-god or goddest, the former being the father, the latter the mother of all minor gods. Each clan also had its totenic ancestral members—the ancients, male and female—resembling each other in type hut not in name. Three supernaturals, differing in name and personation, appear in connection with most Hopi altars. These three are (a) Sky god, (b) Earth-god, and (c) Cultus hero or heroine. They are personated symbolically and may be represented by a human heiug, a graven image, or a picturs, or hy all these combined.'

An important feature of Hopi mythology is the

An important feature of Hopi mythology is the pairing of divinities into male and female, so that Stephen (ap. Fewkes, JAEA ii. 153, note) could observe that

observe that 'there are numerous dual gods. These are not good and had, hut male and femals, as expressing essential completeness. There is no mals deity without a corresponding female counterpart, but there are one or two which would seem to indicate that the two were united in one being... In one or two instances two male deities are associated, but each of these has also a corresponding female delty known by the termination  $m\bar{a}\cdot n\bar{a}$  ('maid']...  $D\bar{a}'\cdot w\bar{a}$ , the sun, and bis male relative, Tai-o-wā, divids the task of bearing the shining shield across the sky, each carrying it four days alternately.' Furthermore, Fewkes suggests (AmAn v. 17, note 3) that the Plumed Serpent (Palülükon) is the dualistic counterpart to the earth.

o. Totemism.—It has already been observed (above, § 6) that the basis of the Hopi religion is totemistic—a totemism which

'has become the worship of anthropomorphic parents, male and female, a reverence which amounts to worship of the souls or tho dead; of beasts or animals as sharing in part a supernatural element possibly due to metempsychosis; and of the great elements foreign to simple totenism (Fewkes, JAFL xl. 194).

The principle of totemism comes conspicuously to the fore in the famous snake ceremony, where, according to Fewkes (19 RBEW, 1008 f.), the presence of snakes

'Is generally supposed to show that this rite is a form of snake worship. It is rather a worship of the ancestors of the Snake claus, which are anthropo-zoömorphic beings, called the Snake youth and the Snake maid; but neither of these represents the Great Snake, nor has their worship anything to do with that of this personage, who was introduced into Hopl mythology and ritual by the Rain-cloud claus.'

This totemism is also the keynote of the ceremonial washing of the snakes in the kivas before the public celebrations (on this see Fewkes, AmAn

xi. 313-318).

10. Nature-worship.—Like Hopi mythology in general, and like their altars, their conception of the Sky-god is, at least in its present form, com-posite. The general system of 'Sky-God Persona-tions in Hopi Worship' has been discussed in detail by Fewkes (JAFL xv. 14-32). The sun is his shield or masque, 'a visible symbol of the magio power of the Sky-god conceived of as an anthropomorphic being' (14). Ahüla, the Sun-god of the kachina clans, returns in the Powama; and, when Eototo, the Germ-god and the ruler of the under world, leads these clan-ancients in their westward departure at the Nimankachina, he can only be deemed the same deity under another aspect (19, 24). Indeed, the kachinas in general are connected with the solar cult. In the bird-men represented in the Soyaluña we again see a personation of the Sky-god (26f.); and, when feather designs are found on almost three-quarters of all ancient Hopi decorated ware, while over two-thirds of the animal pictographs on pottery represent avian forms, we are here to find yet another mode of representation of the same deity (Fewkes, AmAn xi. 1-14), and it is for this reason that turkeys and, next to them in importance, eagles (in ancient times probably parrots as well) are kept for their feathers, which are used in the preparation of bahos (on which see below, § 11) and in countless ceremonies (Fewkes, AmAn, new series, ii. 690-707). The Plumed Snake (Palülükoñ), which in the Palülükoñti religious ceremony emerges from sun-symbols and knocks over a symbolic field of maize, is a representation of the Sky-god wielding the lightning (Fewkes, JAFL xv. 29); and the Bird-Snake personation in the Soyaluna at Walpi represents the return of the Sun-god (28), for

the serpent represents the lightning, one attribute of the Skygod, and the bird, another; combined we have the Bird-Serpent,
the great Sky-god of those Hopi clans whose ancestors once
lived in the "far south" [i.e. Paiatkwabi]' (31).

An extremely interesting cult in this connexion is that of the Alosaka, the ancestors of the Aaltû ('Horn-Men'), who, in their personations—especially at Mishongnovi, where the cult was introduced by the Patun, the founders of the pueblowear close-fitting wicker caps bearing large curved projections of buckskin, painted white, and re-sembling the horns of the mountain sheep, which the Aalta imitate in some of their actions. In Walpi the cult survives in the ceremonies of the Lenkapi, Wüwüchinti, and Soyaluna (see Fewkes, AmAn, new series, i. 524). Like the other horned gods—Ahüla, Calako, Tuñwup, and the Natackas -the Alosaka are intimately connected with the sun. At the same time, they represent the mountain sheep, and their cult is a highly modified form of animal totemism, while the purpose of the rites performed in this cult is the germination and growth of seeds—particularly maize—and the bringing of rain.

11. Sacrifice and prayer.—Reference has been made above (§ 6) to cases of sacrifice to the dead; but the most important form of Hopi sacrifice is that to the deities. At many feasts the first morsel is taken by the head priest and set on one

1 All the full-grown eagles in the pueblos are killed, by choking only, on the day after the Nimankachina, and whistles of eagle bone are used in many ceremonies (Voth, FCMAS x1. ii. 1081.).

side, probably as a sacrifice (Fewkes, JAEA ii. 29 f.; cf. above, §§ 3, 6). When departing from or returning to the pueblo, a stick or stone is thrown on a pile of such objects, especially at shrines of Masauu, the god of the under world (Fewkes, JAFL x. 195, JAEA iv. 41, note 1), for whom bits of food are placed in the rafters of the house, that he may not hasten the departure of any of the family to the under world (Mindeleff, 8 RBEW, 102); the 'prayer-meal,' which is so important throughout Hopi ritual, is also to be considered a form of sacrifice, as is the baho, which is presently to be noted (Fewkes, JAFL x. 196-200). In 1892, Fewkes witnessed a dog sacrifice at Sichumovi; and certain details in the treatment of rabbits after their death in the ceremonial rabbit-hunts may point to a former system of animal sacrifice. At the present time such sacrifice is rare; and, if it does occur, its type is highly modified (ib. 189). It is also noteworthy that the Hopi have a tradition of human sacrifice in connexion with their deluge legend.

An interesting object, which seems to be the medium between sacrifice and prayer, is the baho, or 'prayer-stick,' which bears the prayers to the deities. These 'prayer-sticks' are not confined to the Hopi, but are found also among the Navaho and Apache, with analogues among many other stocks (Hough, HAI ii. 304; Solberg, AA xxxii. 73). These bahos, which range from a few cm. to 1 m. in length, are ordinarily double, 'male' and 'female,' bound together, and are made of sprigs of various sorts of willow and cottouwood with pine needles eagle trees, being adorned with pine needles, eagle feathers, etc., and painted in various colours.¹ They are prepared with fasting and other purifications, but are seldom made for the personal advantage of their manufacturer, being rather for others (cf., for an example, above, § 3), the personal prayer-bearer, or nakvakvosi, being somewhat similar; after they have been used, their sanctity is at an end. The bahos are placed in clefts in the recks in seared enote and shripes etc. usually the rocks, in sacred spots and shrines, etc., usually in honour of specific deities or by special societies, and on certain ceremonial occasions. While they are being made or set in place, prayers are murmured over them, and, in their symbolism of colour, components, etc., the Hopi see a medium between him who prays and his god, so that they are a strengthening of the verbal prayer and the bearer of the petition in permanent form (Solberg,

Like the prayer-meal, the bahos are regarded by Fewkes (16 RBEW, 297; cf. JAEA ii. 30, note 3) as 'sacrifice by symbolic substitution'; and he

continues:

\*\*Offerings of corn or mesl would be natural among an agricultural people like the Hopi. Substitutes for human sacrifice to the gods were sometimes made by the Aztecs in the form of dough images, so that the method of substitution, common in Europe, was not unknown in America [see, further, ERE til. 60b]. . . . In these days sacrifice has come to be a symbolic substitute of products of the field—corn, flour, or pahos—still retaining, bowever, the names "male" and "female," and with a human face painted on one end of the prayer-stick.' The snake-whips are also to be regarded, according to Fewkes (loc. cil.), as true bahos.

Vet another form of substitutional sacrifice is

Yet another form of substitutional sacrifice is seen by Fewkes (JAFL x. 193) in the tihus, or dolls, which, carved especially at the Powami, Palülükonti, and Nimankachina, and presented to the little girls, are 'simulacra of the gods,'

to the little girls, are 'simulacra of the gods,'

1 The pine needles are brought from the San Francisco Mountains; certain seeds from the region south of Holbrooke, Arizona (100-110 miles from Walpi); ochre from Tefka (several days distant); and the colouring materials—red hematic and green malachite—often from the Havasupal (N.W. Arizona), etc. On the sites of Homolobi, Shakwabaiyaki, and Chubkwichatobi, Fowkes (AmAn ix. 359-367) found Pacific coast shells, such as Petunculus giganteus, Conus princeps, Haliotis fulgens, Oliva hiatula, and O. biplicata, which he believes to have been brought by the Hopl in their migrations from the sonth.

and are analogous to the dough images of the Aztecs.

As a single example of the many verbal Hopi prayers may be cited the following, used at the Snake and Flute ceremonies and recorded by Dorsey, FCMAS iii. 213:

'Now we joyfully and encouraged are going to perform a ceremony here. May these clouds from the four world quarters have pity on us! May the rain-water meander through our felds and our crops! And then the corn, quickly having seeds, our children will eat; and they heing satisfied, we shall also eat and he satisfied. And then after that it shall mature and we shall gather it in and put it up in our houses, and after that wo shall eat and live on it. Therefore we are happy, and heing strong shall perform this ceremony.'

12. Purification.—Ritual purity is as necessary to the Hopi as to any other people. Before many ceremonies continence is obligatory. At the con-At the conclusion of some ceremonies, particularly the Snake ceremony, before there can be a return to the ordinary mode of life, it is requisite to remove all that has been associated with the individual during the sacred period, this being accomplished by the taking of a strong emetio. It must also be noted that expectoration forms a portion of a number of rites, apparently with a religious signification (Fewkes, JAEA ii. 76, 93, 98, 103).

13. Symbolism and sinistration.—Symbolism,

here a side of sympathetic magic (see above, § 7), runs through all Hopi ritual. The connexion of feathers with the sun has already been noted (above, § 10). Passing mention may be made of the representation of lightning by the snake (see above, § 10), as well as of the numerous rain-clond symbols, such as the terraced forms found on many of the kachina masques, and the rich symbolism of the altars. To give a full account of Hopi symbolism would practically be synonymous with detailing the entire ceremonial system of this people (cf. Fewkes, AmAn v. 9-26).

As a single concrete example of Hopi symbolism we may cite that of the sipapuh, the representa-tion, in the floor of the kiva, of the aperture through which mankind reached the surface of the earth.1 According to Mindeleff (8 RBEW, 135),

'The sipapuh, with its cavity beneath the floor, is certainly regarded as indicating the place of heginning, the lowest house under the earth, the abode of Myningwa, the Creator; the main or lower floor represents the second stage; and the elevated section of the floor is made to denote the third stage, where animals were created. Mr. Stephen observed, at the New Year festivals, that animal fetiches were set in groups upon this platform. It is also to be noted that the ladder leading to the surface is invariably made of pine, and always rests upon the platform, never upon the lower floor, and in their traditional genesis it is stated that the people climbed up from the third nouse (stage) by a ladder of pine, and through such an opening as the kiva hatchway; only most of the stories indicate that the opening was round. The outer world is the fourth world, or that now occupied.'

Symbolism likewise attaches to the cardinal 'The sipapuh, with its cavity beneath the floor, is certainly

Symbolism likewise attaches to the cardinal points, of which the Hopi recognize six: north, west, south, cast (in the order named), above, and The north really lies between the true north and west, being determined at Tusayan

'by the notch on the horizon from which the sun sets in the summer solstice; the second (west) hy its setting in the winter; the third hy its rising in winter; the fourth by its rising in summer' (Fewkes, JAFI vi. 270, note). Each of these cardinal points has its own symholic colour; north, yellow; west, blue or green; south, red; east, white; ahove, all colour; helow, hiack (HAI i. 325).

A remarkable feature of Hopi ceremonial is the fact that circumambulation (q.v.) is performed sinistrally—north, west, sonth, east. This extremely curious phenomenon has been studied by Fewkes (JAFL v. 33-42), his conclusion being that This exthe north forms the initial point because, according to Hopi tradition, the sipapuh of the creation legend is far away to the north, whence even those

<sup>1</sup> The sipapuh is associated, in the Indian mind, with the orifice through which individuals are horn (Fewkes, JAEA ii.

races which, according to tradition, came from the south originally emerged.1

787

If this he so, it may perhaps be suggested that the reason why the west was taken as the next point, instead of the customary east, was because the legends of the cult-heroesnotably the Snake—represent them as journeying toward the west, the region associated with the dead (Voth, FCMAS III. iv. 311, note 5).

14. Fire, bull-roarer, games.—The ritual pre-paration of fire among the Hopi, as at the Wüwüchimti and Sumaikoli, is by the drill method, and, as in India, the sticks are 'male' and 'female' (Fewkes, AmAn, new series, iii. 445; cf. ERE vi. 26b, 29a).

The bull-roarer (q.v.) is an important feature of Hopi ceremonies. It is regarded as a prayer-stick of the thunder and its whizzing noise as representing the wind that accompanies thunderstorms. The Hopi make the tablet portion from a piece of lightning-riven wood, and measure the length of the string from the heart to

the tips of the fingers of the outstretched hand' (Hough, in HAI 1, 1701.). As is shown by the accompanying cut of the huli-roarer from a Hopi painting of the Toolawitze kachina, the Hopi huli-roarer is, in many cases, markedly of the rain-charm type, having a terraced top to represent rain-clouds and bearing the lightning-snake (see Fewkes, 21 RBEW, plates iii., xxx., xxxv., xlvi., xlviii., lviii.).

The games of the Hopi have been fully considered by Culin, in his 'Games of the N. Amer. Indians' (=24 RBEW [1907]), among these games being archery (390), ball race (666, 678 f.), bean shooter (760), bnzz (755), cat's cradle (774; said by the Zufii to have been taught by the Spider Woman to her children, the twin War Gods [761, 779]), dice (160-165) double ball (649), hidden ball (337-339. (160-165), double ball (649), hidden ball (337-339, 357-364), hoop and pole (495-498), races (807), shinny (633-635), stilts (731), tops (743 f.). At least some of these games are regarded by Culin as possessing a religious connotation, as ball race (666), double ball (649), hidden ball (337-339), and hoop and pole (424-426; cf. also 34, 433, 441)

Among the Hopi games, mention should also be made of a children's dance, called wahikwinema, or 'we-go-throwing dance,' from the fact that piñon knots are tossed to the spectators at its close. It is a secular imitation of the kachina dance, and, when observed by Fewkes on 16 Jan. 1900 (AmAn, new series, iv. 509 f.; cf. 21 RBEW, 30), was performed by about 15 boys and girls, wearing ceremonial kilts and blankets, with painted bodies and with feathers in their hair, but without masques. The little girls play with tihus, or dolls, which are generally made by the participants in the Powamu, Palülükonti, and Nimankachina, but which possess no religious significance of value (Fewkes, AE vii. 45–74).

15. Anthropology and eschatology.—The theo-

15. Anthropology and eschatology.—The theological anthropology of the Hopi is thus described by Fewkes (AmAn ix. 161 f.):

'The modern Hopi recognize in man a double nature, corresponding to hody and soul, and to the latter they are said to give the expressive name breath-hody. This breath-body man shares with organic and horganic nature, and it likewise forms an essential part of objects of human manufacture. The figures which are so constant and prominent on altars have breath-bodies, and it is this essence, not the idol, which is worshipped. The prayer-hearer, or paho, has likewise a hreath-body, and this is the essential part of the offering taken from the shrine hy the god to whom it is addressed. The material stick remains in the shrine; the supernatural is taken by the God.

It is the hreath-body or shade of man which passes at death through the sipapuh, or gateway, to the under-world, the place of its genesis before it was embodied as well as the postmortem home. In this future abode, in their cultus of the dead, these shades or spirits live, engaged in the same pursuits they followed on earth. Even the different religious sodalities perform there much the same rites as in the upper-world, hnt

1 The place of emergence was the Grand Cañon of the Colorado, whence also came the white men, who went to the east (Fewkes, AmAn, new series, i. 535, note 8).

HOPI 788

with more respiendent paraphernalla, the magnificence of which is correlated with the imagination of the priest who may tell you

The best summary of Hopi concepts of the future life is that of Voth (FCMAS XI. ii. 99):

life is that of Voth (FCMAS XI. ii. 99):

'The belief in a future state and In a continued existence after death is well defined in the religious conception and In many rites and ceremonies of the Hopi. That part of man which they believe to be immortal they call hikvsi.... In its practical application the hikvsi is to the Hopi what to us is the soul in its ethical sense. At death the hikvsi leaves the body. When asked whether it is this hikvsi or the deceased person that continues to live in the skeleton house, the average Hopi may get confused. He knows that the body of the dead decays, and believes that it is by virtue or through the part that escapes from the body through the mouth at death, that the dead continue their existence in the future world. The details, with regard to this fact, are more or less vague in the mind of the Hopi, and vary considerably in the different traditions, clans and villages.' Ten Broeck (ap. Schooleraft, Ind. Tribes, iv. [Philadelphia, 1854] 86) reports a belief of the Hopi that at death they would be changed into animals, plants, or things.

With regard to the under world (masski, or

With regard to the under world (masski, or 'skeleton house'), it is believed by the Hopi that the seasons are reversed—when it is summer above, it is winter below. On asking why the five summer 'moons' are named like those of the winter 'moons,' Fewkes (15 RBEW, 258) received

this interesting hint, dropped by one of the priests: "When we of the upper world," he said, "are celebrating the winter Pa moon the people of the under world are engaged in the observance of the Snake or Flute, and vice versa." The ceremonials in the two worlds are synchronous. "That is the reason," said my informant, "that we make the Snake or Flute pahos during the winter season, although the dance is not celebrated until the corresponding month of the following summer."

From their many stories of the under world I am led to believe that the Hopi consider it a counterpart of the earth's surface, and a region inhabited by sentient beings. In this under world the seasons alternate with those in the upper world, and when it is summer in the above it is winter in the world helow, and vice versa. Moreover, coremonics are said to be performed there as here, and frequent references are made to their character. It is believed that these ceremonles somewhat resemble each other and are complemental. In their cultus of the dead the under world is also regarded as the abode of the "breath-body" of the deceased, who enter it through a sipapu, often epoken of as a lake. I have not detected that they differentiate this world into two regions, the abode of the blessed and that of the damned."

16. Sources of culture and religion.—As has

16. Sources of culture and religion.—As has been stated above, both the culture and the religion of the Hopi are composite. That the Hopi are ultimately connected with the peoples of Mexico is energetically maintained by Fewkes, who writes (AmAn vii. 51 f.):

who writes (AmAn vii. 51 f.):

'The pueblos are frontier towns of house-builders, not of nomads, and are peopled by the descendants of colonists from Mexico, mingled with other stocks, by which they have been more or less modified and changed: hence, while comparatively low in the stage of culture, there is still enough to Indicate that there are relationships to Central America. It is not Improbable that both Mexican and Pueblo cultures originated from a region in northern Mexico, developing, as environment permitted, in its northern and southern homes. The refugees to the province of Tusayan lived under adverse conditions to reach any high degree of culture. They have, no doubt, much in their religious ceremonials, their arts, and their language in common with the nomads; their arts, and their language in common with the nomads; they have intermarried to a limited degree with those of a hostile stock, and symbolism similar to theirs, and stories of like Import may be repeated in tribes of widely different modes of life. These were not only the agriculturists; the Indians of the north-west coast were likewise house-huilders, but in a very different way; yet with all the similarities which may be pointed out, the Pueblos are still a distinct people among the ahorigines of the United States, and their closest affinities are with the peoples of the Salado, those of Casas Grandes, and those of Central America, including Mexico. There is need of further observation to demonstrate the truth of this theory, for such only can it he considered at present; but it can hardly be doubted that new researches must lead to important discoveries in this direction.'

In this connexion it must be borne in mind that

In this connexion it must be borne in mind that the Nahnatl languages are held by such Americanists as Brinton, Chamberlain, and Kroeber, following the researches of J. C. E. Buschmann ('Spuren der aztek. Sprache im nördl. Mexiko und amerikan. Norden,' in ABAW, 1859), to be cognate with the Shoshonean, to which Hopi belongs (cf. Henshaw, in *HAI* ii. 556: for a meagre account of the Hopi language, see *NR* iii. 671-674). Moreover, it is generally agreed that the Aztecs, in

their invasion of Mexico, moved sonthward, dis-Gnatemala and Yucatan (cf. Keane, Man Past and Present, Cambridge, 1900, p. 411; Seler, in 28 Bull. BE [1904] 541 f.). It would seem, accordingly, that from some common point certain clans of Shoshones who, in virtue of their environment, or through some other cause, had attained a certain degree of civilization, migrated, the one part southward into Mexico, the other northward to Tusayan. Just as the Aztec branch showed their receptivity of Huaxtecan culture, the Hopi branch were affected by their new surroundings, and accepted Navaho, Apache, Tewan, Kercsan, and Zuñi elements of culture and religion.

and Zufii elements of culture and religion.

Literature.—The only general summaries of the Hopl of any value are the artt. on them by J. W. Fcwkes. In HAI 1. [1907] 650-563, and by J. Mooney, in Cath. Eneyc. vii. [1910] 4381. Much older material Is summarized in T. Waitz, Anthropol. der Naturvölker, iv. [Leipzig, 1864] 207-209, and H. H. Bancroft, NR I. 520-556 (on all the Puebloan peoples), 6001., and especially Hist. of Arizona and New Mexico (San Francisco, 1889 = Works, xvii.). On the early Spanish references, besides Bancroft's Hist., see especially A. F. A. Bandelier, in Papers of the Archaeolog. Inst. of Am., Am. Series, 111. i. [1850] 114-117, 135, ii. [1892] 366 ff. Among the chief early sources accessible in edited form are Pedro de Castañeda de Nagera, Relation du voyage de Cibola, tr. H. Ternaux-Compans, Voyages... pour servir à l'histoire de la découverte de l'Amérique, 1. lx. (Paris, 1833); Antonio de Espejo, Viaje en el año de 1583, ed. and tr. LOUIS H. GRAY.

HORACE. - In the lifetime of Horace (65-8 B.C.) a great change came over the Roman world. If he had been in Rome at the time-but he was at Athens—he might have listened to the *Philippics* of Cicero, as a young man of twenty-one or twentytwo. In his later years, it had become obvious that Augustus had not only secured his own monarchieal power, but was determined to provide for the succession to what was virtually a throne. In Horace's boyhood, it is fairly clear that the prevailing creed of educated Romans was Epieureanism. Lucretius bad expounded with force and fervour the theory which denied all intervention of the gods in human affairs, and construed the universe as an aggregate of material atoms acting under mechanical laws; and, long before, a speaker in a tragedy of Ennius had put it in an epigramuatic form: 'That the gods exist I hold and shell continue to hell her I down that shall continue to hold, but I deny that they are concerned with the doings of men; if they were, it would go well with the good, ill with the wicked,—hut it is not so in the world I know '(Telamo, frag. 1, Ribbeck). In a time of disintegration and civil eonflict, when the Republic seemed to be drifting to utter sbipwreck, it was natural for men to think that the gods were careless of the welfare of Rome; just as, in a later day, the moh of the city is said to have stoned their temples when the news came of the death of Germanicus (Suet. Calig. 5). Augustus restored peace and prosperity, it was possible to believe in Providence once more, and the new government made a deliberate attempt to revive the old religion of Rome; temples were rebuilt, and old ceremonies revived with unheard of According to Dio Cassius (lii. 36), splendour. Maecenas advised Augustus to practise and encourage religion, but to set his face against foreign superstition. The advice is characteristic of Horace's friend and patron, and of the strange contrasts in his nature. An indolent voluptuary at most times, he could on occasion display the greatest energy and tact; somewhat eccentric in his own literary tastes, he made no error in scleeting for encouragement the really great writers of the time; intercsted in astrology, and perhaps ascribing his recovery from an illness to the benign influence of the planet Jupiter (Hor. Odes, II. xvii. 22 f.), he Augustus professed a special interest. Apollo was

dissuaded Augustus from showing any favour to the Oriental creeds and rites which had already made considerable inroads at Rome. The revival of the old religion was undouhtedly a sound policy. The new government had to seek stability in continuity with the past, and political institutions at Rome were closely bound up with ancient rites and eeremonies. Maecenas made no slight contribution to the success of the design when he conciliated the ablest of the rising pocts; and he must have been specially gratified by the accession of Horace, who had fought at Philippi under Brutus and Cassius. Horace was a later and more reluctant

789

convert than Virgil. Epicureanism still had its disciples, though it was no longer, perhaps, professed quite so openly. It has been remarked that the Augustan poets show a reluctance to name Lucretius or extol him directly. Virgil, exalting the knowledge of nature and the defiance of death that it brings, uses a phrase which shows us that be is thinking of Lucretius (Georg. ii. 492, 'strepitumque Acherontis avari '-Lucretius bad spoken of the 'metus Acberuntis'). Horace, on his journey to Brundisium with Maccenas, is asked to believe that incense takes fire spontaneously on the threshold of a shrine; he refuses to do so, and uses words that belong to Lucretius, 'deos didici securum agere ævum' (Sat. 1. v. 101). In saying 'didici,' Horace almost professes himself a disciple of the earlier poet; and it can hardly be doubted that Epicureanism was his prevailing belief, though he interested himself at times in other views. Probahly Maceenas and he were as free from super-stition as any two men of their time. Their ideal of life was progress towards the tranquillity and quiet good sense of Epicurus. You are free from quiet good sense of Epicurus. 'You are free from avariee, you say. Well, but have all the other vices taken their departure too? Meaningless ambition? The fear of death? Anger? Dreams, the terrors of magic, miracles, witches, ghosts by night, and Thessulian portents,—have you a smile for them all? Do you count up your birthdays with a grateful heart? Are you forgiving to your friends? Do you grow kindlier and better with advancing years? (Epp. II. ii. 205 fl.). Horace had dealt scathingly with the sorceries of Canidia. in the Epodes (v. and xvii.) and in an early Satire (I. viii.). Spiritual or nuscen powers seem to have little place in his creed. He is a man of the world, who has arrived at some measure of mental tranquillity by the help of Epicurus.

In the Satires and Epistles, Horace speaks in a familiar tone, as to a friend or friends. He does so, too, in many of the Odes; but some of the latter are much more public and formal in character. He is addressing his countrymen generally, as the lyric poet of Rome (Odes, iv. iii. 23); and here we find him lending his support to the revival of the old religion. It was neglect of the gods that brought trouble npon Italy (Odcs, III. vi.), and only the restoration of the temples would avert its continuance. He goes far in the direction of deifying Augustns,—he imagines him seated among the gods and 'quaffing the cup of nectar with glowing lips' (Odes, III. iii. 11f.), -further, perhaps, than Angustus himself would quite approve; for, as far as Rome itself was concerned, he does not appear to have consented to more than the association of his genius with the twin Lares of the cross-roads. In the Carmen Sacculare, Horace is the official poet of the State: that be was definitely commissioned to write a choric hymn has been confirmed by the record of the celebration found on stone: CARMEN COMPOSVIT HORATIVS FLACCYS. Here in carefully chosen phrase he exalts the deities of the festival and the deities in whom 790 HORA

his chosen guardian, who appears with his bow in Virgil's picture of the battle of Aetium (Aen. viii. 704 f.), and to whom the Palatine temple with its libraries had been dedicated ten years before. Diana is, of course, associated with Apollo. Diana as Ilithyia, the Parcae (l. 25), and Tellus (l. 29) had received special homage during one of the nights of the festival. Venus genetrix, the ancestress of the Julian house, is not forgotten (l. 50), and Jupiter Capitolinus appears as sovercign of the gods in the closing stanza (l. 73). It seems a curious anticipation of the future that special honour is paid to the sun (l. 9 f.), when we recall the importance which the worship of Mithra was to assume in the third century of the Empire. Poetry was not the only art enlisted in the service of the new government. The ideas of the Carmen Sacculare are found also expressed in stone: on the breastplate of the great statue of Augustus, found on the site of Livia's Villa, we again meet with Apollo and Artemis, the rising sun climbing the sky in his chariot and the recumbent figure of the fruitful earth.

There is, no doubt, a considerable difference between the familiar writings of Horace and his more formal lyric compositions. In the former we have seen him deny the activity of the gods; in one of the latter he professes to have been converted from this 'insanicns sapientia' when he heard the thunder roll and saw the lightning flash in a cloudless sky (Odes, I. xxxiv.). Some such declaration may have been expected from the lyric poet of the new age. But, as far as the old religion of Rome is concerned, we must beware of charging Horace with gross inconsistency or hypocrisy; to do so is to some extent to misunderstand the nature of that religion. The religion of Numa was not dogmatic: it made but small claim upon the belief or faith of its votary; it asked for no deep spiritual change in his life. It was largely a contract of commence intended to repositive or system of ceremonies intended to propitiate cer-tain unseen powers, whatever their precise nature might be. If they existed, they might influence the fortunes of Rome for good or evil; to continue their rites was at least prudent, and it was prompted by patriotism and veneration for ancient institutions. Such a religion probably had not lost its hold upon Italy to the extent we are apt to sup-pose; to revive it was not so very artificial and unreal an effort, nor did it involve any great mental or spiritual change in those who promoted the revival or acquiesced in it. See art. ROMAN RELIGION (Fourth Period).

Schanz, Gesch. der röm. Lit., II. i. (Munich, 1901) § 263.

W. R. HARDIE.

HORÆ ('Ωραι, 'seasons').—In the development of Greek religion man's interests and emotions were focused first upon the earth as the source of his food, and then upon the heavenly bodies as the controllers of earth's fertility and seasonal changes. 'In analysing a god we must look for traits from earth, from "weather," from moon, from sun' (J. E. Harrison, Themis, p. 392). So the Horæ as weather. dcities were preceded by a form or aspect in which they were the seasons of earth's fertility. In the decay and mutual shiftings of these primitive ideas and types, partly also from the very nature of religious conceptions, over-emphasis and over-pre-cision are hard to avoid, and the analysis here made for the sake of clearness must not be mistaken for a historical evolution.

r. The Horæ as Nature-deities.—Primarily the Horæ were Nature-powers, controlling earth's fer-

tility through the weather 1- warders of the gates of Olympos, whether to throw open the thick cloud, or set it to' (Il. v. 749 ff.), i.e. they send or withhold rain and dew—at first doubtless as autonomous powers, but later doing the will of Zeus, so that they tend to sink to the position of menial adjuncts of Ölympian state.

In Attica (a dry land with few streams) the dew was a precious thing (see Neumann-Partsch, Physi-kal. Geog. v. Griech., Breslau, 1885, p. 30f.), and the Horm were there worshipped along with Pan-drosos (Dev-maiden). Philochoros (in Athenens, xiv. 656a) says that the Athenians offered boiled, not roast, meat to the Horæ, praying them to avert drought and excessive heat, and to send kindly warmth and timely rains4-4 an interesting example of the admixture of religion with sorcery, of sacrifice with magic '(J. G. Frazer, 'The Magic Art' [ $=GB^*$ , pt. i., 1912], i. 310). The wreaths of mist and cloud which they spin are their own raiment, and in art their long flowing garb distinguishes them from the Graces (Charites [q.v.]), who finally put off all clothing (Paus. ix. 35. 6). The Horæ are always draped, and even partially veiled (see the beautiful Sosias cylix, Berlin, no. 2278, reproduced in J. E. Harrison's Mythol. and Mon. of Anc. Athens, London, 1800 p. 224).

1890, p. 384). Flowers and fruit were the gift of the Horæ; this was symbolized in art by their basket or laden bosom, and expressed in the local Athenian cult by their names—Thallo (Sprouting) and Karpo (Fruit). It was natural to associate them especially with the season of Nature's awakening, the spring-time (Anth. Pal. v. 70: clapv@v '\Op@v'; and ef. Meleagros, ib. ix. 363; in Hesiod [Works and Days, 75] they crown Pandera with flowers of spring, while the Charites bedeck her with jewellery). Thus identified with routhful grape and heavity in Nature 6 the fied with youthful grace and beauty in Nature,6 the Hore appear in art as fair maidens, and there is hardly any attempt to differentiate the figures by means of attributes before Græco-Roman times (see P. Herrmann, De Horarum apud veteres figuris, Berlin, 1887). On the other hand, they were also closely connected with the gifts of harvest-tide, as is shown by the Procession of the Eiresione (εΙρεσιώνη) at the Thargelia and Pyanopsia festivals (about May and October respectively), in honour of Helios (Apollo) and the Horæ; branches twined with figs and other fruits (τὰ ωραῖα πάντα) were carried in procession, and finally set up before the house door. Their noblest gift was the grape (Od. xxiv. 343 f.: ένθα δ΄ ἀνὰ σταφυλαί παντοῖαι ξασιν, Ι ὁππότε δη Διός ώραι επιβρίσειαν υπερθεν-where edd. should write \*Ωραι; Athen. ii. 38c: αῦται γὰρ τὸν τῆς άμπέλου καρπὸν ἐκτρέφουσι).

The naturalistic significance of the Horæ explains their association with other deities, e.g. Hera (Paus. v. 17. 1 and ii. 17. 4), Aphrodite (Paus. v. 15. 3), Dionysos (Athen. ii. 38c), Demeter (Homer. Hym. Dem. 54), Apollo ('Pind. Pæan,' in Oxyrh. Pap. v. p. 25: Γραί τε Θεμίγονοι φίλιππον ἄστυ Θήβας ἐπῆλθον ᾿Απόλλωνι δαίτα φιλοστέφανον άγοντες), Pan (Orph. Hym. x.

10: σύνθρονος Πραις).
2. The Horæ as seasons of the year.—The regular recurrence of the gifts of the Horæ is the primary mark of the recurring seasons, and so the Horæ

mark of the recurring seasons, and so the hore 1 The word ωρα seems at first to have been almost equivalent to weather '(O. Gruppe, Gr. Myth., Munich, 1908, il. 1063, note 3).

Paus. v. 11. 7: καθάπερ τινὰς φύλεκας βασιάνως αὐλῆς. Cl. II. viii. 433, where they tend the horses and chariot of Hera.

Paus. ix. 35. 2: τη δε έτέρα των Πρών νέμουσιν δμεῦ τη Παυδρόσω τιμὰς οἰ 'Αθηναῖοι Θαλλῶ την θεὸν δισμόσινεν δμεῦ τη Παυδρόσω τιμὰς οἰ 'Αθηναῖοι Θαλλῶ την θεὸν δισμόσινεν δμεῦ τη Παυδρόσων τιμὰς οἰ 'Αθηναῖοι Θαλλῶ την θεὸν δισμόσιντικ, μεῦν τη Δεθερον σύμβολον τοῦ θερονς, τὸν δε τεν σταχύων τοῦ θέρονς.

Pschol in Aristoph. Επιβήλε, 729: 'Ηλίφ καὶ 'Πραις ἐορτάζουσι οἱ 'Αθηναῖοι. φέρουσι δὲ οἱ παΐδες τοὺς τε θαλλοὺς ἐρίοις περιειλημένους. See A. Mommsen, Feste d. Stadt Athen, Leipzig, 1898, p. 279, and J. E. Harrison, Prolegomena, p. 79.

HORNS 791

come to be identified with periods of time in the abstract; but they 'are not abstractions, divisions of time; they are the substance, the content of time' (J. E. Harrison, *Themis*, p. 185). The original dual 1 Horæ (mother and maid?) brought to men the gifts of Spring and early Summer (the flowers), and those of late Summer and Autumn (the fruits). Their number thus coincided with the obvious division of the year into the fruitful and unfruitful seasons (θέρος and χειμών); but it is not to this bi-partition that the duality of the Horæ must be traced, for Winter is no true Hora. Later came the distinction of three scasons,2 perhaps connected with the observation of the lunar phases (cf. Servius on Verg. Æn. iii. 284: 'magnum sol circumvolvitur annum. Magnum, ne putemus lunarem esse . . . antiqui . . . dixerunt primo lunarem annum triginta dierum').

The Moon is the true mother of the triple Horse, who are themselves Moirae; and the Moirae, as Orpheus tells us, are hut the three moirae or divisions  $(\mu\ell\rho\eta)$  of the Moon herself, the three divisions of the old Year. And these three Moirae or Horae are also Charites' (Themis, p. 1891.)

But the development of divine dualities into trinities is probably not to be explained by any single formula; and the heraldic groupings beloved by archaic art had some influence here (see J. E. Harri-

archaic art had some influence here (see J. E. Harrison, Prolegomena, p. 288).

In function, and originally perhaps in name also, Horm and Charites are hardly to be distinguished; the popular consciousness, at any rate, was not quite clear on this point (Paus. 1x. 28. 2: τιμῶν γὰρ ἐπ παλαιοῦ ᾿λθηναῖοι λάρμτας λύξω καὶ 'Πρεμότην. τὸ γὰρ τῆς Καρποῦς ἐστὶν οὐ Χάριτος ἀλλὰ 'Ωρας ὅνομα). Two Charites and two Horm supported the front and the back of Apollo's throne at Amyklai (ib. iii. 18. 10); three of each surmounted that of Zeus at Olympla (v. 11. 7); Horm and Charites together decorated Hera's crown at the Heraion (ii. 17. 4). The Borghese Altar (Louvre), an archaistic work freely reproducing types of the 5th cent. B.C., shows three groups of Moira, Charites, and Horm (see Friederichs-Wolters, Gipsabgüsse, Berlin, 1885, no. 422). no. 422).

The earliest representation of the triple Hore is that on the François vase (in Florence; Mon. d. Inst. iv. 54-57, early 6th cent. B.C.); in literature Hesiod first makes Horæ (as well as Moiræ) three, and names them (*Theog.* 902). Homer has no definite number for either Horæ, Moiræ, or Charites. The notion of four Horæ is, however, attained very early, for it occurs in Alkman's (7th cent. B.C.)—'three Seasons set he, summer and winter, and autumn third, and fourth the spring, when trees burgeon, but man may not (yet) eat his fill.' Atheneus preserves a fragment of Kallixenos describing a pageant at Alexandria (time of Ptolemy II. Philadelphos [285-246 B.C.]), in which walked four Horæ dressed in character, each carrying her own fruits. In Roman art the type of the Horæ was modified as four allegorical figures with conventional emblems (for description, see Nonnos, xi. 488-519; the order of the figures and the interpretation of attributes are not always easy). The extension of their functions to embrace the hours as divisions of the day, and the consequent increase of their number to twelve, is a late and frigid conceit, of no religious or artistic significance (cf. Ovid, Met. ii. 26).

3. The Horæ as deities of Fate.—The Moiræ in Hesiod are sisters of the Hore, and both are children of Zeus and Themis (Hes. Theog. 901 ff.: Θέμιν, η τέκεν Ύρας, . . . αἴτ' ἔργ' ἀρεύουσι καταθνητοῖσι βροτοῖσι, Molpas τε). Themis is Social Order. Both

protocial, Molpas τε). Themis is Social Order. Both

είς ἐνιαυτόν | τὰς δὲ δύω καρ' ἐμοί τε καὶ ἄλλοις ἀθανάτοισιν; and
Aristoph. Birds, 708.

1 Fr. 78, Bergk:

\*\*Πρας δ΄ ἔστηκε τρεῖς, θέρος
καὶ χεῖμα κώπώραν τρίταν,
καὶ τέτρατον τὸ ῆρ, ὅκα
σάλλει μέν, ἐσθίεν δ΄ ἄδαν
οὐκ ἔστιν.

ούκ έστιν.
• Athen. v. 1986: Πραι τέσσαρες διεσκευασμεναι και έκάστη φέρουσα τούς ίδιους καρπούς.

Horæ and Moiræ are agents of the will of Zeus1 (Paus. i. 40. 4: ὑπὲρ δὲ τῆς κεφαλῆς τοῦ Διός είσιν Ωραι και Μοίραι δήλα δε πασι την Πεπρωμένην μόνω ol πείθεσθαι, και τας ώρας τον θεόν τοῦτον νέμειν ές το δέον -which illustrates the way in which the sense of personality had gradually faded out of these figures). Cf. Theoritus (Id. xv. 104 f.: βάρδισται μακάρων \*Ωραι φίλαι, ἀλλὰ ποθειναί | ξρχονται πάντεσσι βροτοῖς alei τι φορεῦσαι)—'Nor is there any God so slow as they; Yet longing eyes to them all mortals lift, For each Hour brings a gift' (J. W. Mackail, in CIR xxvi. [1912] 36). This aspect perhaps grew out of the vercention of the recurrence of the out of the perception of the recurrence of the seasons ever coming round with unvarying content (cf. Od. xi. 295: Δψ περιτελλομένου έτεος κα έπήλυθον ώραι, and x. 469: άλλ' ὅτε δή β' ένιαυτὸς ξην,  $\pi$ ερὶ δ' ξτραπον ώραι).<sup>2</sup>

4. The Horæ as ethical powers.—Closely akin to the foregoing is the conception of the Horæ as guardians of the moral order. To this idea Hesiod gave first and final expression, and named the triad Eunomia, Dike, Eirene — Order, Justice, Peace (*Theog.* 902). In Pindar the two conceptions of the Horæ, as Nature-deities, and as invested with moral attributes, find their noblest expression, e.g. Ol. xiii. 6 ff.: 'Therein [in Corinth]' dwell Order and her sisters, sure foundations of cities, even Justice and like-minded Peace, dispensers of wealth to men, golden daughters of wise Themis.' Bacchylides has the same sentiment (xii. 186) — 'Eunomia, who keeps the cities of righteous men in peace.' 'As in the natural righteous men in peace. sphere the Horæ represent a fixed order, so as ethical powers they are Loyalty, Justice, and Peace (Jebb).

In this connexion we must refer to the Hymn of the Kouretes found (1904) at Palaikastro in Crete (R. C. Bosanquet, in BSA xv. [1908-09] 339 ff.; and J. E. Harrison, Themis, p. 1 ff.). One of its verses describes the blessings which flowed from the rule of Zeus,—order in the universe, the regular succession of the seasons, the beginnings of justice and peace on earth' (Bosanquet, loc. cit.)—'And the Hore began to teem with blessings year by year (?), and Justice to possess maukind, and all wild living things were held about by wealth-loving Peace.' The date of this Hymn is perhaps shout 200 p.g. that the actual inscription below. about 300 B.C. (but the actual inscription belongs to about A.D. 200; we have to do with a 'revival').

LITERATURE.—W. Rapp, in Roscher, collects most of the literary references, and gives the monuments, which hardly concern us here; published in 1890, his article is somewhat obsolete in method. J. E. Harrison's Proleg. to the Study of Gr. Rel.<sup>2</sup>, Cambridge, 1903, is now supplemented and often corrected by her Themis: a Study of the Social Origins of Greek Religion, do. 1912; both of these are important.

W. J. WOODHOUSE.

HORNS.—Horns play an important part both in religions symbolism and cult and in magic, and this for reasons which go back to a comparatively primitive stage of thought, as well as to early observations made by man regarding the use of horns

1 Hence figures of both were seen together at Amyklai (Paus. ill. 19. 4), and above the head of Zeus at Megara (i. 40. 4).

2 Here must be mentioned the erroneous idea that there was a festival called 'Ωραία, explained by Hesych. as=νεκύσια, a festival for the dead. The word here is a mere epithet meaning 'what is seasonable,' εc. for the sacrifice (see Dittenberger, Syll. inser. Gr.?, Leipzig, 1900, no. 630: ἐπάργματα ὧν αὶ ωρα ψέρονσιν; and 616. 33: Ζηνὸς ἐνιαντια ὧραία); it has nothing whatever to do with the cult of the Hora (see Stengel, Opfergebr. d. Gr., Leipzig and Berlin, 1910, p. 103).

3 The name Eunomia was used in several Cretan towns as a collective title for the college of magIstrates (Xanthoudides, in Eph. Arch., 1903, p. 203).

HORNS 792

by animals possessing them. These reasons will appear more clearly after certain facts regarding the place which horns hold in representations of

divinities have been reviewed.

1. Divinities with horns.—In many religions, especially in those of antiquity, divinities are freespecially in those of antiquity, divinites are requently represented in statue or image or picture wearing the horns of an animal on the head, or this characteristic is referred to in myths. In Babylonia the higher gods and genii often wear a head-dress with a double pair of horns surrounding the sides and front. Nin-tu, a form of the goddess Mah, is depicted with a horn on her head. Ramman is represented with four horns (see Crown, vol. iv. p. 3412). Hittite deities also were caps ornamented with several pairs of horns, probably those of a bull, as in the sculptures found at Ibriz, Carchemish, and elsewhere. Melkarth of Tyre was represented as an almost besiral god with two short horns on his head, and the Syrian Hadad has short horns on his head, and the Syrian Hadad has similar horns.<sup>2</sup> Phœnician goddesses usually have the horns of a cow, like Ashtaroth-Qarnaim, 'of the two horns,' but these may be borrowed from the Egyptian Hathor, identified with 'Ashtart.<sup>3</sup> Hathor, with whom the cow was identified, is depicted with a cow's head and horns, or merely with Isis was assimilated to her, and cows were sacred to this goddess. Her usual ornament was a pair of horns with the solar or lunar disk between, but sometimes, as the female counterpart of the Ram of Mendes, she wore ram's horns. Ra has sometimes the disk with ram's horns, Osiris sometimes a crown with horns, and Nephthys has also the horns and disk. Kneph has a ram's head with horns, curving or long and projecting. The goddess Seti wears the crown of Upper Egypt, and from it project the horns of a cow. In Greece, Dionysos, one of whose forms was that of the bull, was called the 'horned,' or 'bull-horned'; and myth told how Persephone bore him as Zagreus, a horned infant.<sup>5</sup> Pan and the satyrs showed traces of their goat origin in the goat horns with which they were depicted. Rivers were personified by divinities with horns or a bull's head, e.g. Achelous (q.v.) and others on coins. Ocean also had a bull's head. Some horned divinities may have been represented with horns through Egyptian influence, e.g. Io (equated with Isis), whom myth declared to have been changed into a cow by Hera, and with whom Hera was sometimes identified. Both with whom Hera was sometimes identified. Both goddesses had horns. The Gauls had a god of the under world with horns, called Cernunnos (perhaps = 'the horned,' from cerna, 'horn'); and a group of nameless gods, some with stags' horns, have affinities with him. Some goddesses also have horns. In India the sharp horns of Brāhmaṇaspati are referred to in a hymn, and the horns of Agni, who is sometimes characterized as a bull, are also mentioned. Yama, in Buddhist mythology, has horns. Northern Buddhism (Tibet) has also images of horned divinities in temples, and Mañjuśrī (= Yama) wears a pair of horns. In the lower culture, gods sometimes have horns. A

the lower culture, gods sometimes have horns. A carving from a temple in Fiji shows such a god,

and many examples are also found among the American Indians.1

In many of these instances there can be no doubt that the horns worn by the gods are the relic of their earlier animal forms. Earlier worshipful animals became anthropomorphic; or, again, a worshipful animal was blended with a god. Myth and art retained for the god some part of the animal—head, or pelt, or hoofs, or limbs, or, in this case, the hours. But these last were also a symbol of power, naturally retained for the powerful god. In other cases, however, such symbols of strength may have been given to a god who had no animal One of the most obvious things about horned animals noted by man was the use made of their horns as instruments of destructive force. Animals butted with their horns, or tossed men or other animals with them, or ripped open their bodies. There was also a period in man's history when he made use of horns as weapons or tools. During the Stone Age, and also surviving into the Bronze Age, weapons and tools—harpoons, picks, wedges, chisels, punches, hammers, etc.—were made of reindeer's or stag's horn, and the same material sometimes served as hafts or sockets for axes. The Columbia Indians of N. America still use axes, etc., of horn. This use of horns by man was transferred to the gods; e.g. in Teutonic mythology, Freyr, for want of a sword, slew Beli with a buck's horn.

Thus the horn or the horned animal became a natural symbol of strength. Early religious poetry, art, and myth frequently compare gods or heroes to powerful horned animals. Balaam describes God as having towering horns like a wild ox. The tribe of Joseph is said to have horns like those of the unicorn, with which he will push the peoples. Early Egyptian monuments depict a huge bull destroying the walls of town or fortress, or piercing enemies with his horn; he represents the animal-god, or a god, or the king his descendant. In *Iliad*, ii. 480 f., Agamemnon is compared to a bull, the most conspicuous animal in the herd. to a bull, the most conspicuous animal in the herd. Celtic heroes and kings bear such titles as Brogitaros or tarb in choicid, 'bull of the province'; or they are called 'bull-phantom,' 'prince bull of combat'; or their personal names—Donnotaurus, Deiotaros—show that they were named after the Divine bull. The Vedic god Indra is likened to a horned bull which will repel all peoples, and Soma and other divinities are described in the same way. Mythical animal-gods are also said same way. Mythical animal gods are also said to destroy demoniac enemies by means of their horns. 10 Hence the word 'horn' is sometimes used figuratively as the equivalent of power or strength. nguratively as the equivalent of power or strength. So, in Hebrew usage, raising the horn of a people or an individual signifies victory or pride, 'breaking' it signifies defeat; '11 and God is called 'horn of salvation,' or He raises up for His people 'a horn of salvation.' 12 The Latin usage is similar, cornu being used metaphorically for strength and courage. 13 In Dn 77.24 and Rev 1712 horns signify

Courage. 18 In Dn 77. 24 and Rev 1712 horns signify

kings and their power, and in En. 909 a lamb with horns signifies Judas Maccabæus, and other

horned lambs the Maccabees.

It is thus obvious that the addition of horns to the image or representation of a god might symbolize his divine power apart from his being related to any earlier animal-god. This is analogous to the addition of a third horn to the pair already possessed by horned animal-gods-the triple-horned divine bull or boar of the Celts, or the three antlered stag of a Fionn story, or the giving of a horn to an animal which naturally does not possess it, e.g. the serpent, as in the case of a horned serpent on a Gaulish altar, the Thracian horned snake Zagreus, and a similar horned snake in American Indian legend.2.

Soms moon divinities were represented with a crescent moon on their heads or were symbolized by it. This crescent hears a certain resemblances to a pair of horns, the likeness heing occasionally emphasized, and there was a tendency to confuse the crescent moon on the divinity's head with horns. This is seen e.g., in the cass of the Bah moon god Sin, the Greek lo, and the Egyptian Isis. But there is no clear reason for supposing that the crescent moon is the origin of all horns as

applied to divinities.8

2. Semi-divine and demoniac beings with horns. -Nothing is more usual than to find various beings of a semi-divine, but more usually of a demoniac, character invested with horns. The fauns and satyrs of Greek mythology are an example of this, and more or less corresponding to these are the Russian wood-spirits, or *ljcsyj*, with goat-horns. These may be regarded as later anthropomorphic forms of carlier woodland spirits conceived as goats. Bab. demonology attributed to many of its monstrous demoniac beings animal heads or horns, e.g. a sea-monster with the ears of a basilisk and horns twisted into three curls, while the demon of the S.W. wind had the horns of a goat. It should be noted that Ea-bani has goat-horns as well as other animal features. In ancient Persia the conglomerate animal representations of evil powers were often horned, though here the figure of a good genius is also horned. Hebrew and later Jewish demonology had similar creatures —in some instances, perhaps, the semi-divine beings of the surrounding paganism transformed into demons, e.g. the scrim of Ly 17, 2 Ch 111s, Into demons, e.g. the serim of LV 17, 2 on 11-, Is 13<sup>21</sup> 34<sup>14</sup>, probably horned beings akin to the Greck satyrs and, like them, of goat origin. There was a demon called Keteb Meriri with the head of a calf and a revolving horn; and an ox-like demon dwelling in desolate places. Hindu and Baddhirtic methology and heliof also know horned Buddhistic mythology and belief also know horned demons; and the Japanese oni are frequently seen in human form but with bulls' horns. Demons in later Slav belief often have horns; but this is a conception which is common to Christian demonology in general, as a glance at mediæval and later pictures of hell or of demoniac or witch orgies will show.8 Invariably also the devil presented himself to popular imagination with horns, goat-like face, hoofs, and tail. In both cases we have here a reminiscence of horned demi-gods—Pan, the satyrs and fauns, the Celtic dusii —to all of whom, as far

1 MacQuiloch, 209 ff., 213.

as they existed in folk-memory, a demoniac form was given. Grimm, however, connects the goat-like form of the devil with the goat which was the sacred animal of Donar, 'whom the modern notions of the Devil so often have in the background.'1 Thus, while, in some instances, horned spirits or demons derive from earlier animal-gods or are earlier anthropomorphic horned gods transformed to demoniac shape through the influence of a new religion, in others, horns seem to have been deliberately assigned them along with other bizarre attributes, in order to intensify their monstrous and awe-inspiring aspect.

3. Horned men.-Horned head-dresses were frequently worn by certain persons. Kings sometimes wore such head-dresses, probably because they were regarded as incarnations or representatives of horned gods, or simply as an emblem of their power. Part of the head-dress of an Egyptian king consisted of horns, like those attributed to Osiris.<sup>2</sup> Bab. and Assyr. kings wore rounded caps with parallel horns encircling them from behind, and curving npwards towards the front without meeting. These resembled the head-

dresses of the gods.

Ovid relates a curious story which shows how horns were regarded as a symbol of kingship. Cipus the prætor, looking at his reflexion in water, saw that horns wers on his forehead and then found that they were actually there. Anxious to know what this portent meant, he offered sacrifice, and the augur, after inspecting the entrails and seeing the horns, addressed him as future king. Rather than consent to he king, he desired sentence of banishment; but, though this was agreed to, his head with the horns attached to it was engraved on the posts of the gate (Metam. xv. 565 fl.). This is not unlike the legend of Alexander the Great, who is referred to in the Qur'an (xviii. 82) as horned. The origin of this is probably to be found in the fact that he identified hinself with the god Ammon, and was represented on soms of his coins with ram's horns, like the god himself.

In painting and statnary. Moses was often represented.

od himself.

In painting and statnary, Moses was often represented with horns. This is usually referred to the text of Ex 342, where it is said 'the skin of his face shone,' lit. 'sent forth horns.' 'Horns' is here taken to mean 'beams of light,' but not improbably there is a textual error (see EBi, s.v. 'Horn'). Aquila and the Vulgate translated the text 'quod cornuta esset facies sua,' and thus the legend grew. But it may have been influenced by that of Alexander as well as by the Bab. and Egyp. representations of horned gods.

representations of horned gods.8

Among some savage peoples, horns occasionally form part of the insignia of chiefs. This custom is found among the American Indians, the horns being sometimes still attached to the animal's skin, which covers the head, or they may be made of metal. Priests and medicine-men sometimes wear hornseither as identifying them with some horned god, or because of some magical power attributed to the horns, or as a symbol of office. This is found among savage tribes, and it was also customary with the priests of Babylonia. Again, the horn decoration may be worn by the men of a tribe or by its warriors, as among the Alundu, where the men wear horns as part of their headgear. The wearing of horned helmets may have been

derived from an earlier custom of wearing a headdress composed of the skin of the head with the horns of an animal, but the horns on the helmet were probably also intended to have some apotro-posic force in face of danger. The Sardinians are represented on Egyptian monuments wearing horned casques. Such helmets were also in use among the Etruscans, Romans, and Greeks, as is

794 HORNS

shown by examples which have been discovered as well as by designs on coins. They were also They were also worn by Celtic warriors, and some specimens which have been found have large curving horns elaborately ornamented. Similar horned helmets are figured on the Gundestrup vase, and some

Anglo-Saxon helmets were horned. Mimetic dances, usually for the purpose of securing luck in hunting, are found among savages, e.g. the American Indians; men disgnise themselves with the skin and horns of the animal to be hunted. In Germany and in Gaul, during the Kalends of January, riotous processions of men masquerading in a similar manner took place, and, continuing in Christian times were vice purposed. continuing in Christian times, were vigorously combated by the Church. These had probably some connexion with the earlier animal cults of Celts and Germans. In different parts of England, e.g. in Staffordshire, and sporadically elsewhere, masquerade dances of men wearing deer - horns, etc., occur periodically. Thus at Bromley six men carry reindeer-horns, and dance through the town. The horns are kept in the church tower. Whether these are connected with the older practice just referred to, or whether, as is alleged, they represent a cus-tom connected with an ancient privilege of the custodes silvarum, is uncertain. In Bulgaria at carnival time the actors in a masquerade wear masks combining, e.g., a man's head and an animal's horns. Elsewhere—in Hungary, Bohemia, Sweden—the human representative of the comspirit in animal form wears a goat's or cow's horns; and the grotesque masks worn by savages on ceremonial occasions often have horns attached to them.

on ceremonial occasions often have horns attached to them.

The expression, used of a husband whose wife has been untaithful to him, 'to give horns to' or 'to graft or plant horns on' (Fr. porter les cornes, cornifier; Germ. cinent Hörner aufsetzen; Ital. portar le corna), occurs with great frequency in popular literature from at least the 15th cent. onwards. Caricature also commonly represented the husband wearing horns. But the phrase is of much earlier occurrence and was known to the Greeks, as Artemidorus cites it, κέρατα αὐτῷ ποιήσει. With this is also connected the gesture of reproach, either reproach generally or for this particular misfortune, which consists of pointing with the index and little fingers outstretched like horns—'to make or point horns at' (Fr. faire les cornes à; Ital. far le corna a). It was an old custom, when a wife was wrongfully accused, for the husband to be dragged in procession wearing antiers, or for the wife to carry his horned effigy. Brand cites many suggested explanations of the phrase 'to give horns to,' none of them satisfactory. Dunger 10 finds the origin in the old practice of engrating the spurs of a castrated cock on the root of the excised comb, which caused them to grow like horns, and adds that Germ. Hahnrei, Hahnreh, 'cuckold,' was originally 'capon.' If, however, the gesture of contempt (originating in the similar gesture against persons suspected of the evil eye, who would therefore be held in contempt), the mano cornuta, Il was made commonly to wronged husbands, who have been the subject of popular jest in all ages, it might easily give rise to the other phrase 'to give horns to.' Jorio l'a speaks of the gesture as being used by the ancient Greeks. It should be noticed also that in Spain it is an insult to put up horns against a neighbour's house.

4. Magical aspects of horns.—Any part of a sacred or sacrificial animal tends to be regarded as

4. Magical aspects of horns.—Any part of a sacred or sacrificial animal tends to be regarded as containing the virtues of the whole. This is especially true of the horns, a comparatively indestructible part; and, as they are an adjunct of the skull or head, which is peculiarly regarded as possessing virtue, the spirit of the animal acting through it, 13

the power attributed to them is thus intensified. Hence the horns of any animal, whether sacred or not, are thought to have special virtues.

(a) Horns on houses.—As the heads of horned animals are sometimes placed over doors as protectives, so occasionally the horns, alone or attached to the frontal part of the skull, are thus used. The Greek and Roman custom of placing the head of the sacrificial ox over the door of a house to ward off evils—Boukparior, bucranium—is a case in point.1 Cows' horns were hung up on the temple of Diana on the Aventine, and deer-horns on other temples of Diana, while horns were a common adjunct of shrines and altars.<sup>2</sup> Cows' horns are frequently placed over doorways of dwellings, stables, or cowhonses in Italy and Germany; and in Asia Minor, India, Persia, and Afghanistan the horns of stags, oxen, wild goats, or rams are often seen in a similar position. The custom is not unknown in England, but at Horn Church, Hssex, the horns fastened over the east part of the church are of lead. Horns of oxen are placed on gables of houses in Sumatra; and in Tibet a ram's skull and horns protect doorways. Horns may have

been similarly used in pre-historic times.<sup>6</sup>
(b) Horns of the altar.—Hebrew altars had projections at each corner called 'horns of the altar,' and upon these the blood of sacrifices at the consecration of priests and at the sin-offering was sprinkled. The altar being a sanctuary for the criminal, it was customary for him to take hold of the horns. The Cretan and Mycenean 'horns of consecration,' found as models, or depicted in cult scenes, consist of a base from which rise two horn-like uprights, curving outwards. They are found on shrines, altars, etc., and in some cases the sacred pillar or the double axe rises out of them. These 'horns' are now generally recognized to be conventional representations of an aculiar to be conventional representations of an earlier βουκράνιον: a vase-painting actually shows the two forms together, and from both rises the double axe.8 The Bouxpavior may have been affixed to the altar as a protective or as representing the animalgod, and would tend to become more and more conventional or symbolic. Similar horns have been found crowning models of shrines, and in connexion with pillars, at the sanctuary of Aphrodite at Paphos, and they have also been discovered in Malta. On Greek and on Arabian altars, heads of oxen are depicted—a surrogate for the actual βουκράνιον. 11 Although various theories have been proposed for the origin of the horns of the altar in Hebrew usage, this probably explains their presence, as W. R. Smith suggested.<sup>12</sup> The same usage of affixing wild sheep's horns to altars is found in Tibet.<sup>13</sup> In Greece, altars made of horns, as at Delos, were not unknown.14

(c) Horns as amulets.—It has been seen that horns are used as protectives for houses, etc. Actual or artificial horns are also worn as a defence against the evil eye, and this custom is one of great antiquity, as Jorio has shown. Artificial horns are made of the precious metals, coral, amber, etc.,

HORNS 790

and they are carried on the person or attached to the harness of horses, and the like. Such amulets have been found in Crete, in Etruscan graves, etc., and their use is wide-spread in the southern lands of Europe—Spain, Portugal, Italy. The mano cornuta, or horned hand—a gesture in which the index and little finger are pointed outwards, the others being folded under the thumb—is extensively used, and is found also in early Roman, early Christian, and Hindn art, while it was formerly known in Great Britain. It is sometimes enough to utter the word corno to repel an evil influence. Artificial annulets representing horns or horned heads were used in ancient Egypt. In India the horns of gazelle, antelope, etc., either in whole or in part, repel sicknesses, and horned amulets are in use against demonic influences, while pieces of horn are still effective as ghost-scarers. Horn amulets are also much used in Further India, China, and Japan. Among the lower races similar uses of horns are found. In Africa and among the American Indians they are worn as amulets, either in the hair or suspended from the neck, as protectives against sickness or witchcraft.<sup>6</sup> In Sierra Leone they are attached to a fetish.7

Horns are placed on graves to protect the dead from evil influences, e.g. in ancient Peru, in Flores, and among the Nuba of the Upper Nile.8 Among the Bari, on the occasion of a death, ox-horns are suspended from a pole above the spot.9

Horns ground to powder form an occasional foik-medicine. Among the Wajagga, warriors drink a potion of horn-shavings and rhinoceros-hide in order to obtain the animal's strength. 10 In Egypt an antidote for poison is to drink out of a rhinoceros' horn and to rub in the draught a piece of the horn. 11 In Spain, horn-shavings are drunk as a panacea against the evil eye. 12 In Oyprus, Cos, etc., a so-called snake's horn (perhaps that of the cerastes cornutus) is used for medico-magical purposes. It must be obtained when two snakes are coupling. Something is thrown over them, whereupon one of them gives no the

- (d) The cornucopia, 'horn of plenty,' a horn filled to overflowing with fruits, etc., was an emblem of gods of plenty. Thus it was associated with the goddess Fortuna ('Fortuna cum cornu, pomis, ficis, aut frugibus autumnalibus pleno; 14 'mundanam cornucopiam Fortuna gestans'), 15 and with Copia ('aurea fruges Italiæ pleno diffudit Copia cornu'), 16 But it was also given to the Tria Fata, to Diana, and to the Lares. The Earth-goldess emerging from the earth on Greek vase-paintings has a horn of plenty, from which sometimes rises a child.17 The cornucopia, as the symbol of fruitfulness, could be associated with any god or personage who aided fertility, e.g. Herakles (whose cornucopia sometimes contains  $\phi d\lambda \lambda \omega l$ , or any form of the Agathos Dæmon, e.g. the hero, in the representations of whose ritual feasts it appears, and also the person who represented the Year in processions, the *Eniautos*. Thus, in the Dionysos procession arranged by Ptolemy Philadelphos, Eniautos is

said to carry 'the gold horn of Amaltheia.'1 cornucopia was, in fact, connected (1) with Amaltheia, the goat from whose horn fruits were presented to the infant Zeus, or the nymph possessed of a bull's horn which provided food and drink; and (2) with Achelous, from whose head Herakles had broken it off. Later mythology combined these two myths.<sup>2</sup> Probably a horn became symbolic of fruitfulness because it belonged to an animal associated with fertility-bull or goat-and perhaps also because it was a drinking vessel not only among primitive but among civilized peoples. Gods are mythically represented as drinking from horns, or they or other supornatural beings offer their guests drink from a horn.4 But other things besides drink are carried in such horns, e.g. anointing oil, medicine or fctish stuff (a general practice in Africa, and found in India in Vcdic times), articles used in charms, incantations, etc. Saxo Grammaticus relates that the image of the god Svantovit in Rügen held a horn; and from the diminution or non-diminution of wine poured into it by the priest an augury was drawn regarding the scantiness or abundance of the crops. Medicine or healing water is often efficacious only when drunk out of a horn, especially one taken from a living animal.9

For all these reasons it was easy for the horn to become a magical property, owned by gods, fairies, etc., which it was desirable for men to obtain. Hence many tales of robberies of drinking-horns from fairyland, which attach themselves to various celebrated horns, e.g. that of Oldenburg. These horns may at one time have been used as archaic vessels in pagan rites, in preference to more recent vessels; and a supernatural origin would later tend to be given to them. The stolen horn is sometimes a source of luck, a veritable cornucopia. The cornucopia itself, represented on gem amulets, is said to have magic potency. But, in whatever ways such rich productive power was assigned to horns, this primarily depended on the fact that such power was first attributed to the animals possessing them, the power often working, how-ever, through their horns. This conception was sometimes mythically represented, as in the case of the stag Eikbyrnir, from whose horns water continually trickles down to feed the rivers of the under world,12 and the Iranian primal ox Gayomart,

from whose horns spring fruits.

A parallel to the horn of Amaltheia is found in a Kafir tale, in which a boy has a wonderful ox which produces food from its right horn when that is struck. The ox tells him to remove its horns for safety, but this power still continues. Horned cattle are cherished possessions of the Kafira. 13 In many Cindereast are the the dead mother, transformed to an animal, produces riches or food from her horn, <sup>14</sup> Cf. an American Indian tals in which a sorcersr produces marvels with the aid of a reindeer horn, <sup>15</sup>

(c) Horns as musical instruments.—The horn was widely used as a wind instrument among primitive as well as more advanced peoples, and from it the trumpet, often shaped like a horn, had its origin. Such horns are blown not only for

HORROR 796

ordinary but for ritual purposes. But, partly from the powers ascribed to horns in general, partly from the custom of scaring noxious beings by noise, the blowing of horns became a common method of driving off demons, or of producing magical results. It is a common method of frightening away evil spirits in British Guiana. In cases of sickness the Garo blow horns to drive out the demon which is causing it.<sup>2</sup> Blowing of horns, as well as other forms of noise, is used among many peoples as a method of driving off the monster who is supposed to swallow sun or moon at an eclipse. Among the Jews it is thought that the blowing of the shophar is effective in scaring evil spirits or Satan. It was also through the blowing of rams' horns (keren) that the walls of Jericho are said to have fallen down.4

Gods are sometimes said to possess horns, e.g. Triton who blows 'his wreathed horn'; and Helmdall, warder of the gods, who possesses a powerful horn, Giallarhorn, kept under a sacred tree, and who blows it at the approach of Surtr. 5

5. Horns in sacrificial and other rites.—Horns

are sometimes presented as sacrificial offerings. In Baluchistan ibex or monfflon horns are placed on the shrines of saints as offerings, or to do honour to the saints. In Ladakh rams' horns are fixed on fruit trees at an eclipse, as a propitiatory offering. Such trees are very fruitful. Horns of stags were also sometimes offered to Diana, and votive horns were hung on trees. Where oxen, etc., were sacrificed, their horns were often gilded, and their necks were garlanded. This was the case in necks were garlanded. This was the case in Roman sacrifices, and notices in the Edda and other mythical or legendary sources show that it was usual in Teutonic sacrifices. In later survivals on festal occasions the horns of oxen are gilded, or adorned with gilded apples or with ribbons and flowers; and on the 'cattle days' of the Pongol festival in India the animals are led

abont with painted horns. 10

## HOROSCOPE.—See DIVINATION, STARS.

HORROR. -- Although, both in its subjective aspect and in its external expression, horror is usually regarded as an extreme form of fear (q.v.), there are certain features which almost amount to a difference of kind. It has two forms, which may be called the acute and the diffuse. latter is felt mainly in regard to the sufferings or disasters of others rather than one's own. The report of an earthquake with great loss of life, a famine, the sinking of a great ship such as the Titanic (1912) with so many of its passengers and crew, any sudden, unforeseen disaster causing wide-spread havoc, excite in the hearers an emotion which is usually called horror. The actual learing of the cries of pain, the sight of the sufferings of textures of pain, the sight of the sufferings of textures of pains. ings or tortures of another, especially of a child, the sight of a mutilation or cruel death, whether by the hands of man or by the resistless forces of Nature, cause a more intense form of the same feeling. Horror is therefore pre-eminently a social emotion; to the individual it is a shock, followed, almost as in cases of physical shock, by prolonged depression and to a certain extent a lowering of the mental and physical tone. It is most marked where the cause of the disaster or suffering is human cruelty, greed, ambition, or even careless-

ness and thoughtlessness, as the Congo and Putumayo (1912) atrocities, cruelty to children, the 'horrors' of modern war, etc. In these cases there is not only sympathy with the actual sufferers, but also a feeling of outrage done to the human ideal in the sin of the agent. same feeling stands out strongly in another set of cases, the so-called 'nnnatural' crimes—matricide and parricide, incest, sexual perversity, cannibalism; the feeling is that of violence done to the human type, the ideal of humanity which each of us, consciously or unconsciously, carries about with him. Probably the same sort of feeling was at the root of the horror, once universally felt, towards the insane, towards witches and sorcerers, etc. When the ideal of humanity includes saintliness amongst its elements, the same attitude is extent, towards atheism, blasphemy, and, to a less extent, towards heresy. A lower form is the instinctive repulsion felt among the uneducated towards human deformities—hunchback, clubfoot, dumbness, etc. Thus the diffuse form of horror may be characterized as a humanist emotion, its object being mainly actions, features, traits which outrage or violate the ideal of humanity so far as it is developed in the mind

of the individual.

The acute form of horror is more intense, more egoistic, and concerns situations of imminent danger to oneself. The rush of a wild beast of prey, the sudden fall of a support upon which one is standing at a great height, the outbreak of fire from which there is no escape - in these cases the danger, or it may be the certainty, of death is the exciting motive of the emotion; but there must also be the element of suddenness, of surprise; where the issue has been foreseen, emosurprise; where the issue has been foreseen, emotion follows quite a different course. A special cause of horror of this type is being suddenly brought into the presence of the supernatural. Horripilatio, the hair standing on end, has from time immemorial been associated with the sight of the risen dead, the hearing of a supernatural voice, the believed presence of a god, especially an evil god, a devil, demon, hobgoblin, or a human being who has acquired some of their powers, and being who has acquired some of their powers, and takes some unnatural shape. Common to all these cases is the real or supposed powerlessness of the individual, whether because of the suddenness of the onset, the conditions of the situation, or the immensity of the force which he has to face—the involves the conditions of the structure of the common to the involves of the common to all these cases is the real or supposed powers of the common to all these cases is the real or supposed powers of the common to all these cases is the real or supposed power is the common to all these cases is the real or supposed powerlessness of the individual, whether because of the suddenness of the common to all these cases is the real or supposed powerlessness of the individual, whether because of the suddenness of the common to all these cases is the real or supposed powerlessness of the individual, whether because of the suddenness of the common to all these cases is the case of the common to all these cases is the real or supposed powerlessness of the suddenness of the common to all these cases is the case of the c invulnerability and unlimited power, for example, and unlimited desire to injure, on the part of the evil spirits. The sense of sin, and of the imminence or vastness of the corresponding penalty, or, in more refined natures, the sense of isolation from man or from God which the consciousness of sin brings with it, has, as is well known, stirred up in many souls a sense of horror which has been the motive to religious conversion in some cases, This instance sngto self-destruction in others. gests another distinction from fear proper; fear is a shrinking, a relaxing of energy; while horror, as Bell has said (Anatomy of Expression's, p. 169), 'is full of energy; the body is in the ntmost tension, not unnerved (as) by fear.' In fact the expression of horror looks like a spasm of action, an effort so supreme as to throw the mechanism out of gear; sometimes the effort recovers itself, and of gear; sometimes the effort recovers itself, and strenuous resistance to the danger is made; at other times the paralysis extends to a merciful loss of consciousness. In animals, Verworn has shown that the so-called hypnosis or cataleptic state into which frogs, snakes, birds, guineapigs, rabbits, and other animals fall, when held down in an unusual position, is mainly a spasm of the muscles, arising from the excessive initial 1 Die sogenante Hypnose der Thiere. Jena. 1898. p. 65. 1 Die sogenannte Hypnose der Thiere, Jena, 1898, p. 65.

effort they exert to recover their upright position, and which they are prevented from renewing by fear and excitement. The 'shamming dead,' which many animals adopt in situations of imminent danger, is probably due to the same cause, and is the analogue in animals of the paralysis of horror in man.

In the expression of horror (cf. art. FEAR), the phenomena may be classified partly as those of shock, and partly as those of fear proper. As Hack Tuke points out (i. 222), in slight fear there is a rapid muscular action preparatory to flight, while other parts of the body are fixed and contracted in what Darwin regarded as the instinctive effort to conceal or diminish their size; but, when fear is more extreme, amounting to terror (and still more to horror), instead of flight there is spasm both of the movement nuscles and of those of the breathing; the voice is husky and the general facial expression is that of one struggling for breath. The high shrick, or even squeal, of horror may be referred in the same way to the spasm of muscles under a great effort. The cold spasm of muscles under a great effort. sweat, the rising hair, the arrest of the secretions -dryness of mouth, etc.—and the failure of control over many reflex actions may be set down, as in Darwin's second explanation, to the action of shock, with its immediate lowering of the nervous and therefore of the muscular tone; the extreme pallor of the skin—'grey with horror'—may be due in the same way to the paralysis of the dilator muscles of the small blood-vessels. A prolonged period of horror may—there are quite well authenticated eases (see Tuke, ii. 79)—blanch the hair even of a young man in a few hours. The trembling of the body and the perspiration are probably directly due to the same intense and violent affort so violent as to defeat itself, animals violent effort, so violent as to defeat itself; animals show the same feature in intense fear.

A traveller in India, while sleeping on the verandah of a bungalow, with his European dog beside him, was awakened by the sound of some large animal moving about in the neighbourhood; his dog was making no sign, but, on putting his hand down to touch it, he found it was shivering, and bathed in perspiration; a tiger was found to have visited the village in the night.

The characteristic staring eyes, with widely dilated pupils, and the rapid but shallow breathing—'panting with horror'—have probably a similar origin. Spencer, Bain, Féré, and others regard these phenomena as the result of an association, formed between the expression of actual pain on the one hand and the conditions or accompaniments of pain on the other; but a more likely explanation is that both pain and the intense emotion of horror involve a violent struggle of the whole system, of which these so-called expressions are secondary results. In neither case can the expression he explained as a useful adaptation to the situation, or as inherited action, ancestrally useful, if now no longer so.

In horror the mental powers are affected similarly with the bodily; the senses are confused or defective, and among others the sensibility to pain seems mercifully lowered, as it is in animals also: a S. American fox, when surprised and 'shamming dead,' will endure without moving the severest blows of the whip, without a sign of life, yet will start up and run the moment its persecutor is out of reach. In the same way, in great disasters, as earthquakes, etc., human beings are unconscious of injuries which normally would cause the most intense pain; in the earthquake of Messina (1908) a woman walked many miles with one eye torn out, of which she was unaware; and in the burning of the Juno several of the men climbed up some iron plates without noticing that the skin of their hands was being flayed off. Here, again, it is probably the concentration of psychic energy on the horrible situation that inhibits impressions, however intense in themselves, from reaching consciousness. There is a spasm of the mind as well as of the museles: horror blunts the perceptions, paralyzes the judgment and critical faculty, while the will, as Fere has said (p. 197), is blocked as a

door is jammed in a too violent effort to open it.

Like physical shock, horror may cause death, when too extreme; and in predisposed natures it may cause insanity, whether of the obsessional or of the depressive, melaneholic type. Burton collected a number of instances from the earlier literature; naturally such cases were more familiar in the Middle Ages, when superstition was more wide-spread.

Probably the sympathetic form of horror is more frequent to-day than the egoistic; it certainly is aroused by sights and sounds which a century ago would have left men unmoved; what excites horror in a people might well he taken as a criterion of its degree of civilization.

its diegree of civilization.

## HOSPITALITY.

Arabian (D. S. MARGOLIOUTH), p. 797. Babylonian.—See 'Semitie.' Buddhist (T. W. RHYS DAVIDS), p. 798. Celtic (J. L. GERIG), p. 799. Chinese (J. DYER BALL), p. 303. Christian (G. BONET-MAURY), p. 804. Greek and Roman (ST. G. STOCK), p. 808. Hindu (A. S. GEDEN), p. 812.

HOSPITALITY (Arabian).—The notion suggested by 'hospitality' with the Arabs, as indeed with all other nations (Pindar, Pyth. iv. 30), is the bestowal of food; to 'entertain' and to 'give food' are used in the Qur'ān (xviii. 76) as synonyms. The usual word for 'hospitality' (diyāfah) scems to be connected etymologically with a word dafaf, 'crowd of persons sharing a meal'; one that is slightly less common (qirā) is thought to be connected with qaryah, 'village,' and perhaps is to ho explained from the Heb. qārā, 'to meet.' Partaking of food makes the guest a temporary member

of the family, and so confers certain rights and duties: when Abraham, immediately on the arrival of the Divine guests, offered them a boiled calf, but found that their hands did not reach to it, he hecame terrified (Qur'an xi. 73). The partaking of food, therefore, proves that the intentions of the guest are not hostile, while it also lays on the host the duty of protecting the guest as though he were a member of his own family; ordinarily this relationship is established by the partaking of bread and salt (Doughty, Arabia Deserta, Cambridge, 1883, i. 228). In the case of an ordinary guest the

relationship so established lasts two days and the intervening night, called by the Arabs three days (ib.), supposed to be the period during which the food remains in the body.

The entertainment of guests is thought to have been started by Abraham (Tha'ālibī, Laṭā' if al-Ma'ārif, 1867, p. 4). Both ancient and modern descriptions of Arabia usually dwell on the hospi-tality of the Bedawin. In early or ostensibly early Arabic poetry the subject is a commonplace; a good collection of verses dealing with it is to be found in the Hamāsa (pp. 685-722). The bards boast that in the dead of night their fires attract wayfarers; their dogs welcome these arrivals; without inquiring who they are, or even when the stranger is known to be an enemy they impediately. stranger is known to be an enemy, they immediately slaughter a camel and bid the womankind cook it for the stranger's benefit. They clothe him and talk him to sleep; however gentle they may be, they are ferocious in defence of a guest; how-ever ferocious, they will endure anything from one who is partaking of their hospitality. entertainment of a stranger is a prize which each owner of a tent hurries to secure before the others. Sometimes he is admitted to the family circle, at other times a special tent is erected for

The temporary truce which this hospitality involves seems to be an institution which has survived in the desert from remote antiquity, and has helped to render life there possible. Neverthe-less, the poets quoted would not boast so loudly of their exercising it, were it exercised by every one; and indeed, where the hospitality involves the harbouring of a hunted man, it is clear that the serious consequences attaching to the act would render many unwilling to perform it. In the Qur'an (xi. 80), Lot appeals to the people of Sodom uot to disgrace him in the matter of his gnests; he is apparently ready, if compelled, to yield to force majeure. In the biography of the Prophet we find more than one occasion on which such harbouring is refused, or at any rate made dependent on the pleasure of the chieftain.

In spite, therefore, of the fame of Arab hospitality, and the sanctity which is supposed to attach to it, an invitation to a meal would seem to have been a mode of entrapping an enemy common in Arabia as in other Eastern countries. In the legends which explain how the Jews of Medina became clients, this expedient is twice employed (D. S. Margoliouth, Mohammed and the Rise of Islam, London, 1907, p. 187). It became a recognized principle of Islamic statecraft, and as late as 1st March 1811 was employed by Muhammad Ali in dealing with the Mamluks: 'all the principal men of Cairo flocked to the citadel; coffee was men of Caro hocked to the citadel; collee was then served,' and immediately afterwards a massacre took place (A. A. Paton, *Hist. of the Egyp. Revolution*, London, 1863, ii. 30). Hospitality offered by one chieftain to another is, therefore, apt to be suspected. The Arabic romances not infrequently depict violations of hospitality of another sort. In the *Maqāma* of Harīrī the hero invites a number of guests to a mock wedding, where he treats them to sweatments containing a where he treats them to sweetmeats containing a where he treats them to sweetmeats containing a narcotic; when they are unconscious he strips them of everything and makes off. In the Magamas of Hamadhani (Beirut, 1889, p. 190) the travellers ask for food at a village; they are refused bread except for a price, but are given milk, which, however, they afterwards discover to have been polluted. The use of poison for disposing of enemies was also common at many periods ing of enemies was also common at many periods of the Khalifate. Sometimes the outrage proceeded from the guests: Osman, founder of the Ottoman empire, according to his biographers, got possession of some important fortresses by accepting an

invitation to a wedding-feast, and bringing armed men dressed np as women.

The definition of hospitality in the Qur'an appears to be 'feeding on a linngry day [i.e. a day of famine] an orphan who is also a kinsman, or a poor man who is in need '(xc. 14). The latter act is assigned so high a value that, where the code admits expiation, feeding a certain number of mendicants serves this purpose; the food is to be normal, and the amount specified as a mudd.

The value set in the Qur'an on hospitality has naturally been exaggerated by the Muslim theologians, and in homiletic works some remarkable views are formulated. 'An account will be de-manded ou the Day of Judgment of all expenditure except of that on the entertainment of guests: God will be ashamed to demand any account thereof' (Qūt al-Qulūb, 1310, ii. 182, after Hasan al-Başrī, † 110 A.H.); 'to refuse an invitation is all Başri, † 110 A.H.); 'to refuse an invitation is to disobey God' (ib. 187); provided that the place where the hospitality is offered fulfils certain conditions, e.g. is not adorned with silk or satin, gold or silver vessels, etc. (ib. 190). Sayings attributed to the Prophet are: 'Hospitality is a right'; 'Hospitality for a night may be claimed'; 'Any area or village wherein a Muslim is allowed to mass a night happen; is out of the rele of Islām'. pass a night hnngry is out of the pale of Islām'; 'Hospitality is three [days]; all above that is charity' (probably meaning 'cannot be demanded as a right,' but ingeniously interpreted by some Sūfīs as charity bestowed on the entertainer, who thereby earns heavenly reward [ib. 206 f.]).

In spite of such exhortations, the desire to entertain was by no means universal among Muslims, and a whole literature exists in illustration of

and a whole literature exists in illustration of stinginess; the classical treatise is that by Jāḥiz of Baṣra († 255 A.H.; ed. van Vloten, 1900).

The formulæ wherewith guests are greeted, ahlan wa-sahlan, wa-marhaban, probably go back to remote antiquity: the last of these words is the 'wide room' of the Psalms (18<sup>19</sup> 31<sup>8</sup> etc.). The first is said to mean 'you are among your family'; the second is probably a jingle matching the first, but means 'easy.' In modern times the phrases ānastanā, 'you have rendered us at home,' and auhashtanā, 'you have rendered us lonely,' are often heard besides. We sometimes hear of gifts given to guests in connexion with the word nuzl; given to guests in connexion with the word nuzl; but the practice does not appear to have been wide-

D. S. MARGOLIOUTH.

HOSPITALITY (Buddhist).—This may best be considered under three heads: (1) hospitality of laymen one to the other, (2) hospitality of the laity to members of the religious Orders, and (3)

hospitality of the latter to each other.

1. Hospitality among laymen.—In passages in the canonical books dealing with the lower morality and addressed to unconverted laymen we find ity and addressed to unconverted laymen we may references to this subject. So in the Digha (iii. 190) the ideal wife is said to be hospitable to her lusband's family; in ib. i. 117 it is stated to be the duty of a good citizen to treat guests with honour and respect; in Jātaka, iv. 32 (in the canonical verses), one of the heroes of the tale boasts of the friendly and hospitable reception he always received to greatly and in ib y 388 (again in the accorded to guests; and in ib. v. 388 (again in the canonical verses) it is laid down that his sacrifice canonical verses) it is laid down that his sacrifice is vain who leaves a guest there scated unfed. These injunctions, or expressions of opinion, are not represented as exclusively Buddhist. In the first passage they are put into the mouth of the Buddha, in the others into the mouths of good men not belonging to the Buddhist community. It is evident that the Buddhists adopted current views on the subject, omitting only any reference views on the subject, omitting only any reference

to superstitions enstoms, connected with concep-

tions of tabu or animistic views.

2. Hospitality of the laity to the religious Orders.—When Buddhism arose, there were quite a number of wandering teachers (pabbajitā, 'wanderers') who propagated doctrines as varied as those of the Greek sophists. They belonged to all social grades, though most of them were men of noble It was considered a virtue and a privilege to provide these nnorthodox teachers with the few simple necessaries of their wandering life—especially lodging, food, and olothing. Many of the ally lodging, food, and olothing. Many of the 'wanderers' were organized into communities, with such rules as seemed suitable to their founders for the regulation of such bodies of co-religionists. The people supported all alike, though they had their special favourites. The Buddhists adopted this system, and those among the laity who followed them carried out very willingly the current views as to such hospitality to the 'wanderers.' It was enjoined npon them to give to all. Thus, when Siha, a nobleman who had hitherto followed the Jain doctrine, became a Buddhist, it is specially mentioned that the Buddha urged him to continue, as before, his hospitalities to the members of the Jain Order. So in the Ediets of the Buddhist emperor Asoka frequent mention is made of the duty of hospitality to teachers of all the different sects (not only one's own).

3. Hospitality within the Order.—The Buddhist 'wanderers' were accustomed on their journeyings to stay with one another, and a set of rules was drawn np for their guidance when guests of this kind arrived, prescribing the etiquette to be observed both by the incoming bhikkhus (the āgantukā) and by their hosts. These regulations are of a simple character, such as might be drawn np now noder similar circumstances. They are too long to gueta but have been translated in full long to quote, but have been translated in full by the present writer and Oldenberg in vol. iii. of the Vinaya Texts (SBE xx. [1885]) 273-282.

It should be pointed out that all this is considered to belong to the lower morality of the unconverted; it is taken for granted, and never even referred to in those passages of the books in which the essential doctrines of Buddhism are expounded to the converted. It is really Indian (see Hospitality [Hindn]) rather than Buddhist; though a detailed comparison of the Buddhist doctrine of hospitality with that of other Indian sects would, no doubt, show that the Buddhists laid more stress than the others did on certain details, e.g. on the importance, in such matters, of disregarding, or paying but little attention to, any difference of sectarian opinion.

LITERATURE .- The authorities are quoted in the article.

T. W. Rhys Davids. HOSPITALITY (Celtic).—1. Gauls.—It has already been noted in art. ETHICS AND MORALITY (Celtic), vol. v. p. 455, that the Gauls manifested a great desire for knowledge of the habits and customs of foreign peoples, and it is in this eagerness for information that we find the source of the hospitality for which they are so often praised. They welcomed the bards not only because they loved to hear them sing of the deeds of heroes, but also because they delighted in the stories of distant nations related by these travellers. They never refused hospitality to a stranger; and, after having done him the honour of their table, they pressed him with endless questions regarding their neighbours; as Cæsar says (de Bell. Gall. iv. 5):

'Est enim hoc Gallicae consuetudinis, nti et viatores etiam invitos consistere cogant et, quid quisque eorum de quaque re audierit aut cognoverit, quaerant, et mercatores in oppidis vulgus circumsistat quibusque ex regionihus veniant quasque ibi res cognoverint, pronuntiare cogant.

Every traveller found a cordial welcome among 1 Vinaya Texts, ii. (SBE xvii. [1882]) 115.

the Celto-Iberians, because they considered those who were in the company of strangers as beloved by the gods (G. Dottin, Manuel pour servir à l'étude de l'antiquité celtique, Paris, 1908, p. 117). It is needless to observe, therefore, that the statement of Diodorus (iv. 19, v. 24), that the Celts were accustomed to put strangers to death, is merely a fiction.

2. Irish.—The Irish terminology for the rela-

tions of hospitality is as follows:

vious of hospitality is as follows:

oige, gen. oiged, 'guest'; oeged-chaire, 'guest-friendship.'
hospitality' (Windisch, Die altir. Heldensage, Tain Bo
Chainge, Leipzig, 1905, line 1837); taige oiged, 'guest-house'
(ib. p. liii); bruiden, 'guest-house, a palace with seven doors'
(ib. line 2825), cognate with Goth. baurd, 'hoard' (Acallamh na
Senorach, ed. Windisch, Irische Teate, iv. 1, Leipzig, 1900, p. 39,
ine 1878; p. 77, line 2731); digedechta, 'guesting,' hospitality'
(ib. p. 1, line 12); brugatd, 'host' (Windisch, I. [1880] 405); enechor ainech-ruice, 'face-blush' (Stokes and O'Donovan, Cornac's
Glossary, Calcutta, 1868, p. 66); bruighfer (lit. 'land-man'),
'public hospitaller,' etc.

In Ireland, hospitality was not only practiced as

In Ireland, hospitality was not only practised as a virtue, but enjoined by law from the earliest times, and references to this subject are equally numerous in religions and in secular literature. In the account of the second battle of Moyrath, we find the following statement concerning Ireland in the reign of King Domlinall: 'Her habitations were hospitable, spacious, and open for company and entertainment, to remove the hunger and gloom of guests' (J. O'Donovan, 'The Battle of Magh Rath,' *Irish Archæol. Soc.*, Dublin, 1842, p. 105). Bede (*HE* iii. 27), in writing of the plague of 664, states that many English, both of the plague of 664, states that many English, both of the plague of 664 iii. the nobility and of the lower ranks, had repaired to Ireland at that time either for the sake of study or of continence. The Irish, continnes the historian, 'willingly received them all, and took care to supply them with food, as also to furnish them with books to read, and their teaching, all without any charge.

From what is contained in the Ancient Laws of Ireland (London, 1869-73, iv. 237) as well as in the saga, we may conclude that from the very earliest times a king or a chicftain was obliged to entertain any passing stranger or any other person who might seek his hospitality without asking any questions regarding himself or the purpose of his visit. One who neglected to discharge these duties incurred without fail the hostility of his people. For example, in the account of the second battle of Moytura, the people, we are told, com-plained bitterly of the poor hospitality of King

Bres:

Bres:

'The knives of his people were not greased at his table, nor did their breath smell of ale at the banquet. Neither their poets, nor their hards, nor their satirists, nor their harpers, nor their pipers, nor their trumpeters, nor their jugglers, nor their pipers, nor their trumpeters, nor their jugglers, nor their buffoons, were ever seen engaged in amusing them in the assembly at his court' (P. W. Joyce, Soc. Hist. of Anc. Ireland, London, 1903, i. 58).

The poet Coirpré, son of Etan, once presented himself at the castle of this king seeking hospitality. 'He was shown into a small, dark, sombre house where there was neither fire nor furniture nor bed. He was given three small dry rolls of bread on a little plate. Arising the next morning, he was not grateful? Then Coirpré pronounced against Bres the first magic malediction ever composed in Ireland, and the outcome of all this was that Bres was driven from the throne (II. d'Arbois de Jubainville, Cours de littérature celtique, Paris, 1883-1802, v. 414).

Probably the most unique account of hospitality among the Celts is that of Guaire, king of Connaught, in the 7th cent., who was so constantly giving away that his right hand grew longer than his left.

When Senchán Torpeist became chief of the file in Ireland, after the death of Eochaid Dallan Forgaill in 658, he sought hospitality of Gúaire, accompanied by a retinue of 150 file, or poets, 'as many pupils, as many valets, as many women,' and others besides. Though Gúaire had a huilding purposely constructed for the reception of Senchán and his companions, he was not prepared for such a multitude. The women especially were most exacting in their demands; 'at first the widow and the daughter of Eochaid Dallan, then the wife of Senchán, and, finally, Senchán himself exceeded all the bounds of hospitality.

relationship so established lasts two days and the intervening night, called by the Arabs three days (ib.), supposed to be the period during which the

food remains in the body.

The entertainment of guests is thought to bave been started by Abraham (Tha'ālibī, Latā' if al-Ma'ārif, 1867, p. 4). Both ancient and modern descriptions of Arabia usually dwell on the bospi-tality of the Bedawin. In early or ostensibly early Arabic poetry the subject is a commonplace; a good collection of verses dealing with it is to be found in the Hamāsa (pp. 685-722). The bards boast that in the dead of night their fires attract wayfarers; their dogs welcome these arrivals; without inquiring who they are, or even when the stranger is known to be an enemy, they immediately slaughter a camel and bid the womankind cook it for the stranger's benefit. They clothe him and talk him to sleep; bowever gentle they may be, they are ferocious in defence of a guest; however ferocions, they will endure anything from one who is partaking of their hospitality. The entertainment of a stranger is a prize which each owner of a tent hurries to secure before the others. Sometimes he is admitted to the family circle, at other times a special tent is erected for

The temporary truce which this hospitality involves seems to be an institution which has survived in the desert from remote antiquity, and has belped to render life there possible. Nevertheless, the poets quoted would not boast so loudly of their exercising it, were it exercised by every one; and indeed, where the hospitality involves the harbouring of a hunted man, it is clear that the serious consequences attaching to the act would represent unany unwilling to perform it. In would render many unwilling to perform it. In the Qur'an (xi. 80), Lot appeals to the people of Sodom not to disgrace him in the matter of his guests; he is apparently ready, if compelled, to yield to force majeure. In the biography of the Prophet we find more than one occasion on which such harbouring is refused, or at any rate made dependent on the pleasure of the chieftain. In spite, therefore, of the fame of Arab hospital-

ity, and the sanctity which is supposed to attach to it, an invitation to a meal would seem to have been a mode of entrapping an enemy common in Arabia as in other Eastern countries. In the legends which explain how the Jews of Medina became clients, this expedient is twice employed (D. S. Margoliouth, Mohammed and the Rise of Islam, London, 1907, p. 187). It became a recognized principle of Islāmic statecraft, and as late as Ist March 1811 was employed by Mulammad Ali in dealing with the Mamluks: 'all the principal men of Cairo flocked to the citadel; coffee was then served,' and immediately afterwards a mas-Revolution, London, 1863, ii. 30). Hospitality offered by one chieftain to another is, therefore, apt to be suspected. The Arabic romances not infrequently depict violations of hospitality of matter control to the first the Magazing of Harrist the another sort. In the Magama of Hariri the hero invites a number of guests to a mock wedding, where he treats them to sweetmeats containing a narcotic; when they are unconscions he strips them of everything and makes off. In the Maga-mas of Hamadhani (Beirut, 1889, p. 190) the travellers ask for food at a village; they are refused bread except for a price, but are given milk, which, however, they afterwards discover to have been polluted. The use of poison for disposing of enemies was also common at many periods of the Khalifate. Sometimes the outrage proceeded from the guests: Osman, founder of the Ottoman empire, according to his biographers, got possession of some important fortresses by accepting an invitation to a wedding-feast, and bringing armed men dressed np as women.

The definition of hospitality in the Qnr'an appears to be 'feeding on a hnngry day [i.e. a day of famine] an orphan who is also a kinsman, or a poor man who is in need' (xc. 14). The latter act is assigned so high a value that, where the code admits expiation, feeding a certain number of mendicants serves this purpose; the food is to be normal, and the amount specified as a mudd.

The value set in the Qur'an on bospitality has naturally been exaggerated by the Muslim theologians, and in bomiletic works some remarkable views are formulated. 'An account will be demanded on the Day of Judgment of all expenditure except of that on the entertainment of guests: God will be ashamed to demand any account thereof' ( $Q\bar{u}t$  al- $Qul\bar{u}b$ , 1310, ii. 182, after Hasan al-Başrî, † 110 A.H.); 'to refuse an invitation is to disobey God' (ib. 187); provided that the place where the hospitality is offered fulfils certain conditions as a length adorped with silk or sating gold. ditions, e.g. is not adorned with silk or satin, gold or silver vessels, etc. (ib. 190). Sayings attributed to the Prophet are: 'Hospitality is a right'; 'Hospitality for a night may be claimed'; 'Any area or village wherein a Muslim is allowed to pass a night hingry is out of the pale of Islām'; 'Hospitality is three [days]; all above that is charity' (probably meaning 'cannot be demanded as a right,' but ingeniously interpreted by some Sufis as charity bestowed on the entertainer, who thereby earns heavenly reward [ib. 206 f.]).

In spite of such exhortations, the desire to entertain was by no means universal among Muslims, and a whole literature exists in illustration of stinginess; the classical treatise is that by Jahiz of Başra († 255 A.H.; ed. van Vloten, 1900).

HOSPITALITY (Buddhist).-This may best be considered under three heads: (1) hospitality of laynen one to the other, (2) hospitality of the laity to members of the religious Orders, and (3) hospitality of the latter to each other.

r. Hospitality among laymen.—In passages in the canonical books dealing with the lower moralthe canonical books dealing with the lower morality and addressed to unconverted laymen we find references to this subject. So in the Digha (iii. 190) the ideal wife is said to be hospitable to her husband's family; in ib. i. 117 it is stated to be the duty of a good eitizen to treat guests with honour and respect; in Jātaka, iv. 32 (in the canonical verses), one of the heroes of the tale boasts of the friendly and hospitable reception he always accorded to guests: and in ib. v. 388 (again in the accorded to guests; and in ib. v. 388 (again in the canonical verses) it is laid down that his sacrifice is vain who leaves a guest there seated unfed.
These injunctions, or expressions of opinion, are
not represented as exclusively Buddhist. In the first passage they are put into the mouth of the Buddha, in the others into the mouths of good men not belonging to the Buddhist community. It is evident that the Buddhists adopted current views on the subject, omitting only any reference

inquiries of their guests, in order, without doubt, to afford them better protection in case of necessity (Joyce, ii. 168). As the Ancient Laws (iv. 337) specify cases wherein a king might be excused for deficiency of provisions if the number of guests should exceed expectation, it is obvious that a subject was not expected to exceed the limits of his means in order to provide for a number

As stated above, there was a 'public hospitaller' (bruighfer, brugaid, briuga), who had, as a gift from the king, to assist him in fulfilling the func-tions of his charge, appanage lands of various kinds. He seems to have had, for example, the temporary usufruct of escheated lands, and of such lands as fell into the public domain through failure of heirs, or pending the decision of the courts as to the rightful succession to them. In return for these immunities and lands, he was bound to maintain his establishment in a proper condition. was a position of high honour, and all who laid claim to his hospitality were bound to show him due respect. Though his revenues came princi-pally from the land, he had other allowances. The extent of his house and premises, the character of the furniture, and the amount of supplies of provisions he was bound to have always in store are minutely given in the *Crith Gablach*, a MS published by E. O'Curry (*Manners and Customs of the Anc. Irish*, London, 1873, ii., App. p. 485). He was specially protected by law from trespass and from wanton or malicious damage to his furniture or premises. In the tract mentioned above, the fines for such trespasses and damages are set down with great minuteness. These fines were heavy, and were evidently intended to restrain within the limits of order and decorum those who were entitled to hospitality (O'Curry, i. p. cexlix). Among the privileges extended to the brugaid or bruighfer was that of brewing, for his house should never be found lacking the ale necessary for the refreshment of a king, bishop, poet, judge, or other person, and their respective suites entitled to such entertainment (ib. p. ccclxxvi). He was also the only man under the rank of a *flaith* ('ruler, prince') entitled to the privilege of having his house over a spring of water.

There were two classes of brugaids. According to Stokes (RCel xv. [1894] 431), the inferior and more common grade was that of the brugaid cedach, or 'hundred hospitaller,' who was required to have one hundred of each kind of cattle, one hundred labourers, and corresponding provision for feeding and lodging guests. The higher and more exceptional grade was that of the brugaid lethech, or hospitalier of the kneading trough' (lethech= 'kneading trough'), who was not only obliged to have two hundred of each kind of cattle, but who had to supply his house with all the necessary furniture and utensils, including one hundred beds for gnests. The Ancient Laws (i. 47) deny the brugaid the right to borrow, stating, on the contrary (iv. 311), that he is 'a man of three snouts, the snout of a live hog rooting in the fields to break the blushes of his face, the snout of a dead hog cooking on the hooks, and the pointed snout of a plough' i.e., he should have plenty of live animals, meat cooked and uncooked—usually of three kinds—and a plough, with all other tilling appliances. also called the man of three sacks; i.e., his house was always to be provided with a sack of malt for brewing ale, a sack of salt for curing eattle-joints, and a sack of guail, or charcoal, for forging tho irons, in case of accident to the horses or vehicles The Ancient of travellers (O'Curry, i. p. ccclxii). The Ancient Laws (iv. 310 f.) prescribe, further, that his kitchen fire should never be permitted to go out, and that his cauldron should always remain on the fire, full of joints boiling for any guest who might chance to arrive

In addition to the foregoing, the Brehon Laws (v. 17. 7, 79. 22) provide that a number of open roads should lead to the brugaid's hostel, so that it might be within access of all; and a man should be stationed at each road to allow no traveller to pass without seeking the hospitality of the brugaid. From the account of the destruction of Da Derga's hostel, we are able to ascertain that at night a light was kept burning on the lawn (faithche), to serve as a guide to travellers. In fact, Da Derga never closed any of the doors of his house, day or night, with the exception of those to the windward side (Stokes, 'Togail Bruden Da Derga,' in RCel xxii. [1901]).

According to Keating (History of Ireland, tr. O'Mahony, London, 1866; see Joyce, ii. 170), there were 90 brugaids in Connaught, 90 in Ulster, 93 in Leinster, and 130 in Munster. Though these figures are far from being accurate, they indicate how very numerous these houses of hospitality

There were a few brugaids of a still higher class entertained kings, chiefs, and their retinues, and the exception of this fact, their duties were in every way similar to those of the other two classes.

With the creation of the position of brugaid arose the necessity of public hostels of which he might be placed in charge. These hostels were called brudin or bruden - meaning houses of called brudin or bruden—meaning nouses of publio or State-endowed hospitality. According to the Story of the Pig of Mac Dáthó ('Scélmucci Mic Dáthó,' in Windisch, i. 96), there were in the Red Branch period, about the beginning of the Christian era, six of these royal hostels in Ircland: 'the hostel of Da Derga in the province of Cualann, and the hostel of Forgaill Manach [father-in-law of Cúchulainn] which was located at Lucce Inov Luck, to the north of Dublin]. at Lusca [now Lusk, to the north of Dublin], and the hostel of Mic Dareo in Brefney, and the hostel of Da Choca in West Meath, and the hostel hostel of Da Choca in West Meath, and the hostel of Blai the farmer (briuga) in Ulster,' as well as that of Mac Dáthó, who was king of Leinster. In regard to the hostel of Mac Dáthó, it is said that 'there were seven doors in the hostel, and seven ways through it, and seven hearths in it, and seven cauldrons, and an ox and a salted pig lu each cauldron. The man who came Into the house thrust his fork into the cauldron, and what he obtained at the first thrust, that he ate. It, however, he did not obtain anything at the first thrust, he did not make another' (cf. also Stokes, 'Togail Bruden Da Choca, the Destruction of the Hostel of Da Choca,' in RCcl xxl. [1900] 337).

The bruden of Da Derga was the most important of these hostels. The account of the destruction (togazil) of it was published by Stokes in RCcl xxii.

(togail) of it was published by Stokes in RCel xxii. [1901], and it relates how Conari I., king of Ireland, and his retinue, who were staying there at the time, were destroyed by a band of Irish and British marauders in the 1st cent. A.D. hostel was situated on the river Dodder, where excavations were made and remains were discovered by Frazer (*Proc. Roy. Ir. Acad.*, 1879-86, p. 29). The bruden of Da Choca, in the destruction of which Cormac Conlingeas, son of Conchobar, king of Ulster, perished, was the next in importance, and was, as stated above, situated in West Meath, a few miles from Athlone. The account of its destruction contains the statement also that every bruden is an asylum of the red hand, i.e. for all eriminals guilty of murder (RCel xxi. 315).

There was still another kind of public hospitaller, called the biatach or biadhtach, though the difference between him and the brugaid is not very clear. The Book of the Dun Cow (Leabhar na hUidhre, p. 123, line 4f. from bottom) mentions them together, apparently making no distinction whatever between them. The biatach was obliged

The first maintained that she would die unless she obtained a bowl of heer made with milk, and in addition to this she demanded the marrow from the aukle of a wild bon. Between Christmas and Epiphany, she wished to have beside her, on a yew tree, a small freshly hatched cuckoo. As a belt it was necessary to supply her with a strip of hacon taken from a perfectly white pig. The only kind of mount with which she could be satiside was a horse with purple mane and white legs. Her dress must be a spider's web of many colours. Marban, the brother and ewineherd of Guaire, was able to secure to her all that she had asked, and to satisfy the equally exacting requeste of the two other women.

But Senchau was a still more embarrassing guest than they. He declared that he would die unless Ginire could regale him and his retinue, and also the nobility of Connaught, with an ample repast, consisting of the bacon of pigs not born of sows and of beer produced from a single grain of barley. In case of refusal Guaire was threatened with an incantation. Marhan again came to his rescue. He possessed nine pigs from a sow which was killed by a wolf before they were born; and eleven years previous to this dato, he had sown a grain of barley which gave him an ear the following year. The grains of this can produced eeventeen ears the next year, and so on until the end of the eleventh year, when he reaped seven large piles of barley, all coming from the original grain. Consequently Ghaire was able to satisfy the demands of Senchán.

The latter, however, not expecting to be gratified, was dispeased, and refused to eat. Guaire, though Irritated hy tho behaviour of his guest, sent a servant to Senchán berning a goose prepared expressly for him. Senchán refused to accept the gift, and addressed the servant as follows: 'I knew your grandmother. One day, from the top of a roek, she showed the way to some passing lepers. Consequently, I will receive nothing from your hands.'

Guaire louged and fed these lncommodions guests for a year, a season,

Further instances of the hospitality of the early Irish are the following:

Trish are the following:

First, in the Feast of Bricriu it is stated that Conchobar, king of Ulster, established the law that each chieftain should feast the Ulstermen one uight in the year. The wife of the hero who did the entertaining was obliged to furuish the wives of the Ulstermen with seven oxen, seven pigs, seven easks, seven barrels, seven mugs, seven pots, seven cups, and seven glasses of beer, seven services of fish, birds, and vegetables (d'Arbois de Jubainville, v. 150). While the three heroes, Conall, Legaire, and Cúcbulainn, are making their long expedition, they are received on all sides with marked attention. In ono place a repast sufficient for one hundred persons is served to them, and they are permitted to have their choice of the daughters of the king (b. 161). When they reach the house of Curci, they learn that his wife has received orders from her absent husband to grant them the hospitality of his home. Hence, she prepares for them a bath, intoxicating drinks, and superb beds (b. 186).

In the story of the Birth and Reign of Conchobar, we are told that each Ulsterman gave him hospitality for one night, and allowed him to pass it with his wife—a right that this despotic king pretended to exercise ever afterwards (ib. 7 t.). In the Murder of Conchobar, it is stated that the kings of Munster, Leinster, etc., permitted the poet Aitherné to pass the night with their wives during his sojourn in their countries, for far of the protection of the Ulstermen which had been granted to him (ib. 8661.)

The regular period for which a guest could claim hospitality was three days and three nights, after which the host could refuse to continue to entertain his guest, if he so wished (cf. Acallamh na Senórach, in Windisch, iv. 1, lines 436, 1601, 1823, 2797, 3531, 7352, 7652; RCel ix. [1888] 495, note 3). Mael Duin and his fellow-pilgrims are received everyther with the great the relief to the results of t where with the greatest cordiality, but, at the end of three nights and three days, their host or hostess usually vanishes (d'Arbois de Jubainville, v. 474, 479 f.). The attentions shown them in the 'Island of the Queen and her seventeen daughters' rival those of Guaire given above (ib. 486 ff.). If the lord thought his reception unworthy of his guests

because of his being taken unawares, he usually attempted to atone for his inhospitality during the course of the following days. When Mac Datho was surprised by the heroes of Ulster and of Connaught and their retinues, he killed his immense hog, the wonder of his kingdom, in hononr of his guests. Fearing that they might still be dis-pleased with their reception, he apologized for his lack of preparations, saying: 'If anything is lacking to-day, I will kill it to-morrow' ('Scel mucei Mic Dáthó,' in Windisch, i. 98).

In historical times we find the same esteem for

hospitality as in the more legendary periods. Of Owen O'Madden, a Connaught chief, it is stated in the Tribes and Customs of Hy-many (ed. O'Donovan, Irish Archwol. Soc. v. [1843] 141) that 'he does not refuse any one gold or horses, food or kine, and he is the wealthiest of the race of Gaedhal for bestowing them'; while St. Patrick, in blessing the district of Moy Rein, is reported to have said: 'I leave prosperity to the place so that it shall provide for all [requiring help] even though every cleric should be poor, which is interpreted by Hennessy to mean that, if the clergy were too poor, the laity should be rich enough to provide for all (Hennessy and Kelly, The Book of Fenagh, Dublin, 1875,

Among the different classes of society, we find first that the king was expected to keep his house

always open to visitors.

always open to visitors.

'A prince,'snys Cormac Mac Art, 'should light his lamps on Samhain Day (the celebration of the beginning of winter on 1 Nov.) and welcome his guests with clapping of hands and comfortable seats, and the cup-bearers should be active in distributing meat and drink' (Joyce, i. 58).

Once a guest had partaken of food in a house, whether of king or of subject, the host was not allowed thereafter to offer him violence or even to show him disverseport.

show him disrespect.

show him disrespect.

In A.D. 508, Branduff, king of Leinster, offended at the licentious conduct of Prince Cummascach, set fire to the building in which the latter and his suite were feasting. Glasdam, the prince's jester, who had been entertained a few days before as a guest by the king, exclaimed: 'Lo, I have eaten thy meat! Let not this deed of shaine he now wrought on me!' To this Branduff answered: 'By no means shall this be done! Climb up to the ridge-pole and leap out over the flames to the ground. We will let thee pass, and thus shall thou escape!' But the jester refused to be saved without his master, and gave his mantle and cap to the prince, who escaped from the burning building (S. H. O'Grady, Silva Gadelica, London, 1892, ii, xxviii; Joyce, ii. 483).

During the time that the guest was under the roof of his host, the latter was bound by law to protect him. A gloss on the Ancient Laws explains the

him. A gloss on the Ancient Laws explains the words t'aurgaire, 'thy defence,' by the statement that no one—not even an officer of the law—should be allowed to enter one's house and lay hold of his guest (i.e. for debts or crime) before the end of the third night. In such an event the host could lay claim to damages against those who had violated the privacy of his home (d'Arbois de Jubainville, 'Introduction et commentaire du Senchus-Môr', in

Cours de litt. celt. viii. 145).

When the king or his subject found himself unable to discharge the duties of a host, he suffered the 'blush of honourable shame' or 'face-blush' (enech-ruice). In order to 'break or prevent the face-blush' of a king, the Ancient Laws (iv. 311) say that the bruighfer, or 'public hospitaller,' had the 'snout of a rooting hog'—in other words, he had plenty. If, however, the king or his subject should lack the necessary provisions at the arrival of his guests, through default of another, the defaulter was obliged to pay him the compensation known as the 'blush-line' (Ancient Laws of Ireland, i. 123. 11; 129, note 1; iv. 345, 347, 13; Cormac's Glossary, 103, s.v. 'Leos'). When the king or his subject found himself un-

Glossary, 103, s.v. 'Leos').

Though, according to the Ancient Laws (iv. 237), chieftains were held 'bound to entertain without asking any questions,' the feine, or farmers, it seems, were given permission to make suitable

inquiries of their guests, in order, without doubt, to afford them better protection in case of necessity (Joyce, ii. 168). As the Ancient Laws (iv. 337) specify cases wherein a king might be excused for deficiency of provisions if the number of guests should exceed expectation, it is obvious that a subject was not expected to exceed the limits of his means in order to provide for a number of guests

As stated above, there was a 'public hospitaller' (bruighfer, brugaid, briuga), who had, as a gift from the king, to assist him in fulfilling the functions of his charge, appanage lands of various kinds. He seems to have had, for example, the temporary usufruct of escheated lands, and of such lands as fell into the public domain through failure of heirs, or pending the decision of the courts as to the rightful succession to them. In return for these immunities and lands, he was bound to maintain his establishment in a proper condition. was a position of high honour, and all who laid claim to his hospitality were bound to show him dne respect. Though his revenues came princidne respect. pally from the land, he had other allowances. The extent of his house and premises, the character of the furniture, and the amount of supplies of provisions he was bound to have always in store are minutely given in the *Crith Gablach*, a MS published by E. O'Curry (*Manners and Customs of the Anc. Irish*, London, 1873, ii., App. p. 485). He was specially protected by law from trespass and from wanton or malicious damage to his furniture In the tract mentioned above, the or premiscs. fines for such trespasses and damages are set down with great minuteness. These fines were heavy, and were evidently intended to restrain within the limits of order and decorum those who were entitled to hospitality (O'Curry, i. p. ccxlix). Among the privileges extended to the brugaid or bruighfer was that of brewing, for his house should never be found lacking the ale necessary for the refreshment of a king, bishop, poet, judge, or other persen, and their respective suites entitled to such entertainment (ib. p. ccclxxvi). He was also the only man under the rank of a flaith ('ruler, prince') entitled to the privilege of having his house over a spring of water.
There were two classes of brugaids.

According to Stokes (RCel xv. [1894] 431), the inferior and more common grade was that of the brugaid cedach, or 'hundred hospitaller,' who was required to have one hundred of each kind of cattle, one hundred labourers, and corresponding provision for feeding and lodging guests. The higher and more exceptional grade was that of the brugaid lethech, or 'hospitaller of the kneading trough' (lethech= kneading trough'), who was not only obliged to have two hundred of each kind of cattle, but who had to supply his house with all the necessary furniture and utensils, including one hundred beds The Ancient Laws (i. 47) deny the for gnests. brugaid the right to berrow, stating, on the contrary (iv. 311), that he is 'a man of three snouts, the snout of a live hog rooting in the fields to break the blushes of his face, the snout of a dead hog coeking on the hoeks, and the pointed snout of a plough'; i.e., he should have plenty of live animals, meat ceeked and uncooked—usually of three kinds—and a plough, with all other tilling appliances. He is also called the man of three sacks; i.e., his house was always to be provided with a sack of malt for brewing ale, a sack of salt for enring cattle-joints, and a sack of guail, or charcoal, 'for forging the irons,' in case of accident to the horses or vehicles of travellers (O'Curry, i. p. ceclxii). The Ancient Laws (iv. 310f.) prescribe, further, that his kitchen fire should never be permitted to go out, and that his cauldron should always remain on the fire, full

of joints boiling for any guest who might chance to arrive.

In addition to the foregoing, the Brehon Laws (v. 17. 7, 79. 22) provide that a number of open roads should lead to the brugaid's hostel, so that it might be within access of all; and a man should be stationed at each road to allow no traveller to pass without seeking the hospitality of the brugaid. From the account of the destruction of Da Derga's hostel, we are able to ascertain that at night a light was kept hurning on the lawn (faithche), to serve as a guide to travellers. In fact, Da Derga never closed any of the doors of his house, day on right, with the exception of those to the windward side (Stokes, 'Togail Bruden Da Derga,' in RCel xxii. [1901]).

According to Keating (History of Ireland, tr. O'Mahony, London, 1866; see Joyce, ii. 170), there were 90 brugaids in Connaught, 90 in Ulster, 93 in Leinster, and 130 in Munster. Though these figures are far from being accurate, they indicate how very numerous these houses of hospitality

There were a few brugaids of a still higher class than those already mentioned, who, it seems, entertained kings, chiefs, and their retinnes, and were on very intimate terms with them. With the exception of this fact, their dutics were in every way similar to those of the other two classes.

With the creation of the position of brugaid arose the necessity of public hostels of which he might be placed in charge. These hostels were called brudin or bruden—meaning houses of public or State-endowed hospitality. According to the Story of the Pig of Mac Dáthó ('Scél mucci Mic Dáthó,' in Windisch, i. 96), there were in the Red Branch period, about the beginning of the Christian era, six of these royal hostels in Ircland: 'the hostel of Da Derga in the province of Cualann, and the hostel of Forgaill Manach [father-in-law of Cúchulainn] which was located at Lusca [now Lusk, to the north of Dublin], and the hostel of Mic Dareo in Brefney, and the hostel of Da Choca in West Meath, and the hostel of Blai the farmer (briuga) in Ulster,' as well as that of Mac Dáthó, who was king of Leinster. In regard to the hostel of Mac Dáthó, it is said that 'there were seven doors in the hostel, and seven ways

of Blai the farmer (bringa) in Ulster,' as well as that of Mac Dáthó, who was king of Leinster. In regard to the hostel of Mac Dáthó, it is said that 'there were seven doors in the hostel, and seven ways through it, and seven hearths in it, and seven cauldrons, and an ox and a salted pig in each cauldron. The man who came into the house thrust his fork into the cauldron, and what he obtained at the first thrust, that he ate. If, however, he did not obtain anything at the first thrust, he did not make another' (cf. also Stokes, 'Togail Bruden Da Choca, the Destruction of the Hostel of Da Choca,' in RCsi xxl. [1900] 307).

The bruden of Da Derga was the most important of these hostels. The account of the destruction (tecsail) of it was published by Stokes in RCsi xxi.

(togail) of it was published by Stokes in RCel xxii. [1901], and it relates how Conari I., king of Ireland, and his retinne, who were staying there at the time, were destroyed by a band of Irish and British marauders in the 1st cent. A.D. This hostel was situated on the river Dedder, where excavations were made and remains were discovered by Frazer (Proc. Roy. Ir. Acad., 1879-86, p. 29). The bruden of Da Choca, in the destruction of which Cormac Conlingeas, son of Conchobar, king of Ulster, perished, was the next in importance, and was, as stated above, situated in West Meath, a few miles from Athlonc. The account of its destruction contains the statement also that every bruden is an asylum of the red hand, i.e. for all criminals guilty of marder (RCel xxi. 315).

There was still another kind of public hospitaller, called the biatach or biadhtach, though the difference between him and the brugaid is not very clear. The Book of the Dun Cow (Leabhar na hUidhre, p. 123, line 4f. from bottom) mentions them together, apparently making no distinction whatever between them. The biatach was obliged

to entertain travellers and the chief's soldiers whenever they sought his hospitality. In order to enable him to discharge his functions, he was granted a tract of arable land called the bailebiadhtaigh, which was equivalent to about 1000 English acres. Besides this, he was entitled to a much larger amount of waste land.

According to Cormac's Glossary (p. 130), there were several female brugaids during the time of Finn who entertained chieftains and warriors on

their hunting expeditions.

In addition to these, we find in Christian times that every monastery contained a tech-diged, or guest-house, for the reception of travellers. These houses, which were constructed at some distance from the monks' cells, dated from the time of St. Patrick (Joyce, i. 330). According to the Lives of the Saints (Stokes, Lives of the Saints from the Book of Lismore, Oxford, 1890), it was enjoined upon some of the inmates to receive the stranger, take off his shoes, wash his feet in warm water, and prepare supper and bed for him. This was done in accordance with the Ancient Laws (v. 121. 27), which state that 'hospitality is incumbent on every servant of the Church.

every servant of the Church.'

An old Irlsh sermon on Doomsday contains the following: 'The Lord will say to the just, "I was in need of a guest-house (tech-aiged), and ye gavs ms hospitality" (Stokes, 'Tidings of Doomsday: a Sermon on Doomsday from the Lebar na hUidhre, 'In RCel iv. (1879-80)). Once, when St. Columba expected a guest at Iona, he told the brethren to prepare the hospitium, or gusst-houss, and to have water ready to wash the stranger's feet (Reeves, Adamnan's Life of St. Columba, Dublin, 1857, p. 27). When St. Ciaran of Clonnacnoise arrived at Saigir (now Seirkleran in King's County), to visit the other Claran, abbot of Saigir, the latter, learning that the fire had unexpectedly gone out, said to him with a tone of apology: 'The first thing that ye (the saint and his followers) need is water to wash your feet, but just now we have no means of heating water for you' (Stokes, Lives of the Saints, 277). Mac Conglinne, displeused at the poor reception accorded him in the monastery at Cork, complains that on his arrival no one came to the guest-house to wash his feet, so that he was obliged to wash them himself (Meyer and Henuessy, The Vision of Mac Conglinne, Loudon, 1892, p. 10). As in secular life, so in monastic life thers was no obligation to entertain guests after the third day. third day

Guest-houses with men-servants (timthirig) in charge were also established in the most important nunneries of the country. In the Féilire, or Calendar, of Oengus the Culdee (Trans. Roy. Ir. Acad., 1880, p. 72f.), it is related that a chief named Coirfre or Carbery arrived at St. Brigit's Convent in Kildare with a child in his arms, and was conducted to the guest-house. Guest-houses are also found attached to the houses of chiefs and even of persons not so high in the social scale who might be able to bear the expense. They consisted usually of one large apartment, which was always kept prepared for the reception of travellers, and which was in charge of a handmaid who

washed the guests' feet (ib. 48).

If a monastery was situated on the banks of a river where there was no bridge, the monks usually had a curragh ready to ferry any traveller across free of charge (Healy, Insula Sanctorum et Doctorum: Ireland's Ancient Schools and Scholars, Dublin, 1890, p. 427). Irish missionaries on the Continent established hospitalia for the use of pilgrims on the way to Rome, some of which were in Germany, although they were mostly in France (cf. Cambrensis Eversus, ed. for the Celtic Society

by M. Kelly, Dublin, 1850, ii. 244 f.).

The public hostels began to diminish in number at the time of the Anglo-Norman invasion, and finally they disappeared altogether. After this the monasteries and some of the wealthier chiefs continued to keep up the custom for some time, but Henry VIII. finally ordered the suppression of all monasteries, and the last vestige of this custom disappeared with them. In 1539, Lord Leonard Gray, the Irish lord deputy, and the Dublin council petitioned the king in vain to exempt six bed made of rushes, and covered with a coarse

monasteries from the order, and among their reasons they cite the following:

'For in those houses commenly, and other such like, in defaute of comen innes, which are not in this land, the Kinge's Deputie, and all other his Grace's Counsaell and Officers, also Irishmen, and others resorting to the Kinge's Deputie in ther quarters, is and hath bene most comenlie loged at the costes of the said houses. . . Also at every hosting, rode, and jorney, the said houses in ther [own] propre costes fyndethe [entertainment for] as many men of warr, as they are apoynted by the Kinge's Deputie and Counsaell for the same' (State Papers, Henry VIII., Ireland, Iii. 130; see also Register of All Hallows, xxx, and Joyce, i. 333).

3. Welsh .- Among the Welsh the same admiration for hospitality and liberality was shown as among the Irish. The house of the Cymro was always open to the traveller. When he came within a district and presented himself at a house, he first delivered up his arms, which signified that he placed himself under the nawd (peace) of the penteulu (head of the household). If he expressed the desire of seeking a lodging, for the first two nights he was treated as a guest of the householder with whom he stayed, but on the third night he was deemed an agenhine, or member of the man's household, for whom such man was answerable (Hubert Lewis, The Ancient Laws of Wales, ed. J. E. Lloyd, London, 1889, p. 281). The guest's way of manifesting his intention of staying overnight was to allow his feet to be washed. But, if he refused the proffered service, it was apparent that he desired only morning refreshments, and not lodging for the night.

'The young men,' says Giraldus Cambrensis (Opera, ed. J. F. Dinnock, London, 1861-91, i. 10, p. 1821.), 'move about in troops and families under the direction of a chosen leader. Attached only to arms and ease, and ever ready to stand forth in defence of their country, they have free admittance into every house as it it were their own.'

As each house had its young women and its harps allotted to the purpose of entertaining visitors, those who arrived early in the day were entertained either with conversation or music until evening, when the principal meal of the day was served. Though, as Giraldus says (Descrip. Kambriæ, i. 10, p. 182f.; cf. ETHICS AND MORALITY [Celtic], vol. v. p. 463), this varied according to the number and dignity of the persons assembled and the degrees of wealth of different households, it was almost always a simple repast, for 'the kitchen does not supply many dishes nor high-seasoned

incitements to eating. The houses of the Welsh were not furnished with tables, cloths, or napkins. The guests were scated in messes of three, instead of couples as elsewhere. All the dishes were at once set before them in large platters on rushes or grass spread on the floor (ib.), and the food consisted of milk, cheese, butter, and plainly-cooked meat (Rhys and Brynmor-Jones, The Welsh People, London, 1900, p. 250 f.). The bread that they served was a thin and broad cake fresh baked every day, which, Giraldus says (loc. cit.), was called lagana in the old writings, but which was probably very much the same as the 'griddle-bread' or 'bake-stone bread'—bara llech or bara planc—of modern times (Rhys and Brynmor-Jones, loc. cit.; T. Wright, The Hist. Works of Giraldus Cambrensis, London, 1863, p. 493, note 2). To this was usually added broth with chopped-up meat. 'Such a repast,' adds Giraldus, 'was formerly used by the public worth from rules. by the noble youth from whom this nation boasts its descent, and whose manners it still partly imitates.' The family waited on the guests, the host and hostess standing up and taking no food until the needs of their visitors were satisfied. The evening was then passed by the guests in listening to the songs or recitations of the bard of the house hold, or of minstrels who in their wandering had

kind of cloth manufactured in the country, called brychan, was then placed along the side of the hall, and the family and guests lay down to sleep in common (Giraldus, loc. cit.). The fire on the hearth in the centre of this hall continued to burn all night, and the people were so arranged that it was

at their feet.

'But when the under side begins to he tired with the hardness of the hed,' adds Glraidus (loc. cit.), 'or the upper one to suffer from the cold, they immediately leap up and go to the fire, which soon relieves them from hoth inconveniences; and then, returning to their couch, they alternately expose their sides to the cold and to the hardness of the bed.'

Until the end of the third night the host and the people of the house were responsible for the

the people of the house were responsible for the safety of the guest. According to the Ancient Laws of Wales, one of the cases where guardians are appropriate is to guard lawful guests (Dimetian Code, III. v. p. 300; Gwentian Code, II. xxxviii. p. 377; Anomalous Welsh Laws, xiv. p. 714, in Aneurin Owen, Ancient Laws and Institutes of Wales, London, 1841). If during the period of his visit recognized by law—i.e. before the end of three days—the guest was accused of theft, the testimony of his host could clear him only of theft committed by night (Anomalous Laws, xiv. p. 739, § 2); and, if the host failed to clear his guest, he himself was obliged to pay three pounds to his lord and to surrender his property to the complainant, i.e. sufficient, no doubt, to relieve his guest of the punishment he might suffer (ib.; also ch. xii. p.

punishment he might suffer (ib.; also ch. xii. p. 705; and ch. xv. p. 709).

'There are three privileged progressive visits,' say the Triads of Dyonwal Moelmud (W. Probert, The Ancient Laws of Cambria, London, 1823, p. 9, no. 24), 'guaranteed by the honour of the tribe of the Cambrians, and no person must presume to hinder them: the visit of an ambassador from a hordering kingdom; the visit of hards from the hordering kingdom in the convention, according to the privilege and institute of the bards of the Isle of Britain; and the visit of foreigners in the peace and protection of God and His tranquillity.'

To illustrate further the attitude of the Welsh towards hospitality, it is stated elsewhere in the same work (§ 12) that 'there are three progressions that, wherever they go, are entitled to their support and maintenance: those who have the privilege of distinction; those who have the privilege of hards; and those who have the privilege of minstrelsy and foreigners under the protection of the tribe of Cambrians.' Finally, the 'three renowned progressions' are the chief of the tribe and his retinue, hards and their disciples, and a judge with the retainers of his court. 'Wherever they are,'continue the Triads, 'they are entitled to their liberty and free maintenance' (ib. § 30).

This goes to show how greatly a violation of the laws of hospitality was condemned among the Welsh, and was are anterexpended.

the laws of hospitality was condemned among the Welsh; and we are not surprised, therefore, to discover that severe punishments were meted out to the guilty. If it happened, for example, that a guest was seen to arrive and enter a house in good health, and in the morning was found dead, and the host and his family had raised no alarm and exhibited no marks of wounds received in his defence, the host and his family could not escape capital punishment, 'unless perhaps they were liberated per patriam, if the King's justices should deem that the trnth could be ascertained per patriam' (Lewis, op. cit. 379). It was on this account that laws were made about receiving and parting with guests by daylight. If, on the con-trary, the master of the house was found dead in the morning, and his servant or a stranger had passed the night in it, such stranger or servant could scarcely escape danger by the inquisition of the country because of the grave suspicion. 'But if the patria could not say the truth as to such secret deed, the man was sufficiently acquitted by

secret deed, the man was suinciently acquitted by their not finding him guilty '(ib.).

The Ancient Laws provide further (Anomalous Laws, IV. 1V. 402, § 14, ed. Aneurin Owen) that, 'if a person come as an innate to another person, having an animal or other property with him, when he departs, he is not to take with him the off-pring, ordung, or erop, or any piece of furniture; nor anything but what he brought with him to the house, if it remain, unless an agreement assign it to him; as to which it is said: an agreement is stronger than justice.'

As in Ireland, no stranger was to remain beyond three days without 'commendation,' i.e. without being commended to some lord, who should take him under his protection, and answer for him, or without being admitted to some borh, or fellowship of mutual responsibility (Leges Hen. I., cviii. in Lewis, 281). In Ireland this was called 'binding the lord's protection,' and was necessary to every stranger to safeguard him through a country (J. Strachan, Stories from the Tain, Dublin, 1908, p. Cúchulainn not only accepts the protection of King Conchobar of Ulster on his first visit to Emain Macha, but even requires the Ulstermen to accept protection from himself (ib.).

Of the king's guest the Venedotian Code (I. ix. 10, § 18, ed. Aneurin Owen) states that he is one of the six persons to be served with food and liquor hy the royal steward. The other five who are the recipients of this honour are the king himself, his henaw, his edcling, his chief falconer, and his footholder. And, finally, one of the four persons for whom there is no protection against the king is 'a person to whom the king is a supper guest, who ought to supply him with food that night, and who does not supply him '(Dimetian Code, II. viii. p.

214, ed. Aneurin Owen).

LITERATURE.—This is sufficiently indicated in the article. JOHN LAWRENCE GERIG.

HOSPITALITY (Chinese).—The Chinese are a hospitable people; they enjoy social intercourse; they love to chat together. Notwithstanding the hard struggle for existence which many of them have to carry on, they enjoy life to the full, and extract well-nigh all the pleasure which can be got out of it. One of the first sentences in the Confucien Analects 1 runs thus: 'How pleasant it is to have friends come from a distance!' The commentators amplify the wording of this so that it reads: 'How pleasant to have friends come to you from a distance, attracted by your learning!' There is no doubt that the context gives them reason to paraphrase the passage in this way. At the same time, although the attractive power that draws the friends together is learning, it opens the way to hospitality. This is not the only instance in the Classics; others are even more to the point, and in them we find hospitality enjoined as a duty. these Classics are the standard which the Chinese have applied to their conduct, and they contain, according to them, the principles which are to guide them in all affairs.

It might be thought that the etiquette of this Eastern people, with its stiff formality, like a coatof-mail, would so hamper intercourse that it would act as a kill-joy on all attempts at the offering of hospitality; but under the rigid forms of outward ceremonial there beats a human heart warm with all the elements that foster the exhibition of it. A good corrective to formality of interconrse, lest A good corrective to formancy of intercourse, less it should dull the edge of hospitality, is found in a saying of the philosopher Tsang, one of the principal disciples of Confucius: 'I daily examine myself ... whether in interconrse with friends I may not have been sincerc.' Another disciple of the Sage also gives utterance to much the same idea when he states it as one of the leading principles in the conduct of a man to whom the term 'learned' might be applied: 'If, in his intercourse with his friends, his words are sincere.' We thus see that these followers of the Master were carrying out the principles he laid down of 'Hold faithfulness and sincerity as first principles.'

In the compilation of memorials known as 'The Book of History,' extending over about 1700 years from the most ancient times before the day of Confucius, we have, in the portion known as 'The

<sup>1</sup> Bk. L ch. li. 2 *Ib.* bk. i. ch. vil.

<sup>&</sup>lt;sup>2</sup> Ib. bk. L ch. iv. <sup>4</sup> Ib. bk. L ch. viil. ver. 2.

Great Plan' (2205-2198 B.C.), one of the oldest parts of this ancient work, 'the entertainment of guests' laid down as one of the eight objects of government. This would seem to include in its purview 'all festive ceremonies, all the interconrses of society.' In an agreement entered into by an assembly of princes in 650 B.C., one of the injunctions was: 'Be not forgetful of strangers and travellers.'2 This was taken to include officers from other countries. 'The Doctrine of the Mean'—one of the Chinese Classics—in a description of the duties of a ruler of a country, says that 'by indulgent treatment of men from a distance they are brought to resort to him from all quarters. The commentators differ as to the meaning of 'men from a distance.' One thinks it includes 'guests or envoys and travellers, or travelling merchants.' The learned translator of the 'Chinese Classics' (J. Legge) doubts whether any others but travelling merchants are intended by it. Another commentator would apply it to 'the princes of surrounding kingdoms.' ing kingdoms.'

Confucius considered that the study of 'The Book of Poetry' taught the art of sociability. This book is a collection of 305 pieces selected by Confucins from more than 3000. They may almost be described as folk-songs, thus collected thousands of years before the vogue for such things in the West. These short poems represent the life of the West. These short poems represent the life of the Chinese some 3000 years ago. Some of them were sung at festive gatherings. In one 'admirable guests' are spoken of. Merry gatherings they seem to have been, for in one we read: 'As we feast, we laugh and talk.' In another we have a general returning from all his toils and feasting hamily with his friends on roset turtle and mined happily with his friends on roast turtle and minced carp. Another is descriptive of a feast given by a king. The hospitality thus sung in these songs scems to have been appreciated to the full.8

The clan system brings in its train, among its good features, the development of hospitality on a far more liberal scale than might be expected. Should a European, in adopting a Chinese surname for his cognomen while among the inhabitants of the 'Middle Kingdom,' come across a Chinese gentlemen bearing the same name, he will find the most genuine interest taken in him by his newly-discovered clansman, and the utmost hospitality shown to him. The clansman in trouble or distress finds a refuge in his ancestral home in the heart of his clan in this land where poorhouses are unknown. Not only so, but a clausman, when out of work, can, and often does, go and live for days and weeks with one of the same clan as himself. Bed and board are given to him freely, and he is hospitably entertained until work again comes his way; and he, in his turn, is able to offer the same entertainment to a brother clansman in need.

The teapot in China is always ready to be produced on the advent of a stranger; nor is the Chinaman content with a single teapot, for often each cup serves for one, and each guest has a brew made specially for him, and replenished with boiling water as often as he likes. These cups are slowly sipped while the host does his best to entertain his visitor. Sweetmeats and pipes are also offered. A phrase in the Chinese language which is constantly heard is 'Come and sit down,' being an invitation to the house of those who utter it.

The low status of woman in China, her supposed inferior position in contrast to man, and the false prudery of the Chinese, have hitherto prevented the mingling of the sexes in entertainments,

vented the mingring of the sexes in entertainments, such as dinners, parties, and social gatherings.

Respectable women were excluded from participation in all such functions except when all present were of the same sex as themselves. But with the revolution in manners, customs, and education, as well as in government, which is now taking place in China, a different position is being taken by woman, and she has begun to share with her husband in both the dispensing and the receiving of hospitality.

HOSPITALITY (Christian).—The foundation of the first hospitals and hospices by the Christian Church shows the practical way in which the principle of hospitality was applied by Christian charity to invalids and weary travellers. Hospitality is proverbial in the East (cf. the story of Abraham, Gn 183-8). The guest was sacred and inviolable, even although discovered to be an enemy (Jg 1921). Before the time of caravanserais, which were unknown until the end of the 7th cent. B.C. (cf. Jer 92), the stranger, when travelling, was dependent upon the hospitality of private individuals. Hospitality was practised among the Greeks and Romans also, was practised among the Greeks and Romans also, but it was a private rather than a civic virtne. Christianity transformed it into a public virtne, by demanding as a formal duty from members of the Church, and especially bishops, a more merciful and beneficent spirit. In fact, the earliest Christians interpreted Christ's words, 'I was a stranger, and ye took me in' (Mt 25°5), in their broadest sense (Mt 10¹2, Lk 10⁵ 14¹2⁻¹¹), and showed hasnitality fowards pagans as well as showed hospitality towards pagans as well as Christians.

St. Paul followed in Christ's footsteps: 'In love of the brethren be tenderly affectioned one to another; ... communicating to the necessities of the saints; given to hospitality' (Ro 12<sup>10-14</sup>, cf. 1 Ti 5<sup>10</sup>). A 'saint,' i.e. a Christian, provided with a letter of recommendation from his church, could travel from one end of the Roman empire to the other without having any enviety chart a home without having any anxiety about a home. Wherever there was a Christian church he was sure of receiving food and shelter, and attention in case of illness. The Christians showed hospitality towards all poor travellers.

I. Hospitality in the East.-Naturally it was The Hospitality in the Hast.—Nathrally it was travellers attacked by illness that called forth the greatest pity and anxiety. This was the origin of hospitals (ξενοδοχία, hospitia), the first of which was founded in the last quarter of the 4th cent. A.D., on account of a famine which had caused a deadly epidemic.

epidemic.

The historian Sozomen (HE, iii. 16) relates the foundation in a.p. 570 of the hospital of Edessa in Syria thus: 'The town of Edessa, being afflicted by lamine, the hermit Ephraim came forth from his seclusion to upbraid the rich with their hard-heartedness in allowing the poor to die instead of devoting a part of their superfluous wealth to their relief. "That wealth which you are so carefully amassing," he said to them, "will only serve to condemn you, while you are losing your own souls, which are worth more than all the treasures on earth!" Persuaded by these words, the rich people of Edessa informed him of their inability to decide upon the person to be entrusted with the distribution of their wealth, as the people of their acquaintance were all covetous and might put it to a wrong use. "And," Ephraim asked them, "what is your opinion of me?" "You are an honest man," they replied, "and we shall gladly give you charge of the distribution of our alms." He thereupon received large sums of money from them, and immediately ordered about three hundred beds to be fitted up in the public porches, and there attention was devoted to all those suffering from the effects of the famine—strangers and inhabitants alike.'

Basil, bishop of Cæsarea (in Cappadocia), had also

Basil, bishop of Cæsarea (in Cappadocia), had also opened a hospital in 375, not far from this town, consisting of several separate houses (see Greg. Naz. Orat. xlii. 'In landem Basilii Magni,' 35).

If Osrhoene and Cappadocia can boast of having had the first hospitals, it was Constantinople that first specified the different classes of those requir-ing relief. Between A.D. 400 and 403 Chrysostom built several hospitals with the surplus of his income from the archbishopric. Each of these he placed under the charge of two faithful priests, to assist whom he engaged physicians, cooks, and capable workmen (Palladius, Dial. de vita S. Joan. Chrysos., p. 19, ed. Montfaucon [PG xivii. 20]). There were seven different hospitals: (1) the Xenodochium, inn for stranger travellers; (2) the Nosocomium, home for the treatment of acute complaints; (3) the Lobotrophium, shelter for cripples and chronic invalids; (4) the Orphanotrophium, home for the reception of orphans; (5) the Gerontotrophium, home for old people; (6) the Ptocho-trophium, home for the reception of the poor; and (7) the Pandochium, a refuge for all kinds of destitutes.

Jerome is reputed to have founded the first orphanage in Bethlehem; and John the almoner, who was elected patriarch of Alexandria in 608, organized assistance to the poor and sick of that

The Council of Chalcedon (451) recommended the parabolani, i.e. 'clerks' employed in the hospitals, to remain in the service of the bishop. were placed at the head of the list of those maintained at the expense of the Church, and in return they and the deaconesses attended to the sick Among the qualifications required from a widow in order to receive the Church's bounty St. Panl mentions: 'if she hath used hospitality to strangers, if she hath washed the saints' feet, if she hath relieved the afflicted' (1 Ti 510).

2. Hospitality in the West.—Christian hospitality in the West gave rise to two kinds of institutions: (1) hospitals, intended for invalids, lepers, and other sufferers, and generally placed under the control of the bishops; and (2) hospices or almshouses, adjoining most of the monasteries, situated along the chief roads and in dangerous mountain passes; these extended a welcome to travellers overcome by fatigue or benumbed with

cold.

Hospitality was the chief virtue enjoined upon the bishop. 'The bishop,' says St. Paul, 'must be given to hospitality' (1 Ti 32, Tit 18), and the Apostolio precept was confirmed by the most famous Fathers of the Church. Jerome in his Ep. lii. ('To Nepotian'), and Chrysostom in his Second Sermon on Genesis, advise bishops to keep their houses open to strangers and sufferers in the cause of truth, and their table at the service of the poor, for, in doing so, they are sure to be entertaining Christ in disguise. St. Augustine had started a hospital in his own honse, and often sat down at the same table with his guests. The Councils adopted this principle, and entrusted the bishops with the assistance of the poor and the sick (Conneil of Chalcedon, can. viii.).

In the decrees of the Councils of the Gallican Church are found the earliest regulations concerning the relief of the poor and the sick. The First Council, held at Orleans under Childebert in 511, devoted two canons to them. The fifth decreed that 'of the proceeds of offerings or lands granted to the Chnrch by the king two-thirds shall be employed in the maintenance of the clergy and the poor and one-third in the redemption of prisoners.' The sixteenth adds: 'The bishop shall provide food and clothing, so far as his means will allow, to the poor and the sick who on account of their infirmities are nnable to work for them-selves.' The Fifth Conneil of Orleans (549) is quite as formal. After forbidding the nnlawful nse of any part of the alms bequeathed to the hospitals.

it enjoins upon the bishops (can. xxi.) the care particularly of lepers, and the duty of supplying them to the best of their ability with food and clothing, 'so that Christian mercy might not fail even in the case of victims of that most loathsome disease.' The fifteenth canon mentions the earliest hospital as being in France, and founded at Lyons in 542 by King Childebert and his wife Ultrogotha at the instigation of the bishop. Paris does not seem to have had one until the middle of the 7th cent., when Bishop Landry established (650) a home for invalids and poor travellers near his church—whence the name Hôtel-Dieu. It is to Lanfranc, its archbishop, that Canterbury owes its hospital (1070), and the first London hospital was called St. Bartholomew's (1102). In these semibarbarian ages hospitals were often dedicated to the Holy Spirit, whose emblem, a dove, is found on the frontal of several, e.g. the hospital built by Pope Symmachus in Rome (498).

At first the bishops had the management of the hospitals, but gradually, as the duties increased, they were passed over to the chapters, who delegated this work to a few priests called provisores or præfecti nosocomii. The Capitularies of Charlemagne decreed that the secular and regular clergy should, as one of their first duties, relieve the sick; and, to guard against neglect of duty, they placed the xcnodochia under the control of royal authority (Capit. 183). The Council of Meaux (845) refers to the Hospitia Scotorum, complaining that these had been divorted from their original purpose of hospitality, and imploring their reinstatement as almshouses for travellers and

invalids.

3. Hospices of the monasteries in the Middle Ages.—While the bishops were the first to establish hospitals for the care of the sick, it was the monks who created a special form of Christian hospitality—the almshouse, or so-called xeno-dochium. Its foundation is generally attributed to St. Benedict of Nursia; this, however, is not correct, as it can be traced back as far as the very beginnings of Eastern monasticism.

beginnings of Eastern monasticism.

The custom of washing the feet of the guests which was in vogue in the Irish convents of the 6th cent, came from the East. Johannes Cassianus, founder of the monastery of St. Victor near Marseilles (410), in his Collationes (chapter xvi. 'Magister hospitium'), describes the ceremony performed at the reception of a guest. After the customary salutations the traveller was introduced into the hospitium, a wing of the building apart from the rest of the cloister, and taken to his room. After having been shown into the dining-room is the joy caused by the arrival of the formal cooked food

When Columban, at the end of the 6th cent., brought Christian principles, along with the elements of civilization, into Ganl, which had been laid waste by the barbarians, he founded monas. teries at Anegray, Luxeuil, Fontaine, Bobbio, etc., and urged upon his monks the dnty of hospitality towards strangers and poor pilgrims. His disciples, St. Ouen, St. Faron, St. Gall, etc., practised cipies, St. Ouen, St. Lawrin, St., practised this virtue to such an extent that in the 9th cent. the fame of Scottish hospitality was wide spread. These are the hospitable monasteries referred to by Charlemagne in his Capitularies, by the mem. bers of the Council of Meaux (845), and the Council of Quierzy (858), when they speak of the decline of the hospitia percgrinorum. The bishops assembled at the first of these Councils implored the Emperor Louis le Débonnaire to restore these hospitia, help them by endowments, and place them under their control.

CONITOI.

'It is our duty,' they said (can. 40), 'to inform your Majesty concerning the homes established and equipped in the time of your predecessors, and to-day almost annihilated. The Scottish hospitia especially, which the kindly people of that nation had built there, and endowed from their wealth acquired because of their goodness, have been completely diverted from their real purpose. Not only are those who ask for hospitality refused

admittance, but even those who, bound by the tie of religion, have served the Lord from their childhood, are being driven from them, and compelled to go begging from door to door.'

Besides Johannes Cassianus and Columban, who imitated the practices of the Eastern Church, Benedict of Nursia also imposed the duty of hospitality upon the monks of the West. The 53rd chapter of his Regula is entitled 'de Hospitibus suscipiendis,' and reads as follows: 'Let all visitors who chance to arrive be welcomed as if it were Christ Himself, who will one day say to us, "I was a stranger, and ye took me in." Let due honour be shown to all, especially to servants of the faith and pilgrims' (PL lxvi. 750; cf. E. Martène, Commentarius in

regulam Sancti Benedicti, Paris, 1690).
There was practically no monastery in the Middle Ages without its xenodochium, and many had a nosocomium as well. These hospices rendered valuable service at a time when the roads were infested by robbers, or exposed to frost and snow, e.g. those leading through the passes of high mountains, and subject to thick fogs or snowstorms. Such were the hospices adjoining the cloisters on the three chief Alpine passes leading from Switzerland to Italy and France. The hospice of St. Gothard has been almost abandoned since the completion of the railway from Lucerne to Lugano (1882). Simplon is greatly affected by the new road leading from Brieg to Domo d'Ossola. The hospice of the Great St. Bernard still exists, and is prepared to render service to travellers on the road from Martigny to Aosta. The monks living there Martigny to Aosta. The monks living there belong to the Augustinian Order, and their lay brothers are called 'Maroniers.' The adventures of those brave men and their famous dogs are well known. They have rescued from certain death thousands of travellers lost in the snow and almost frozen. For this purpose the monastery of the Great St. Bernard received an annual grant from the kings of France (1760). The grant was confirmed and increased by Napoleon Bonaparte, after the famous crossing of his army through this pass (15th to 21st May 1800).

4. Orders of Hospitallers.—The epidemics which frequently raged among the pilgrims travelling from the West to the Holy Land, and among the soldiers of the Crusades, led to the foundation of hospitals and Orders of Hospitallers in Palestine. The first hospitals were founded at the end of the 6th cent. by Pope Gregory I., and afterwards restored by Charlemagne, who took a great interest in the Christians of the East. The hospice of St. John, established at Jerusalem before the first Crusade by a few Annalfi citizens, gave rise to the first Order of Hospitallers called 'Hospitallers of St. John of Jerusalem,' or 'Joannites,' whose rules were drawn up by Brother Gerard (or Gerhard) (d. 1120). This Order, composed of three classes, priests, knights, and attendants, was of a semicharitable, semi-military nature. As a consequence of the scrvices it rendered, it spread throughout the whole of Europe, and was divided into eight provinces or 'languages.' After the conquest of Palestine by the Turks, the Joannites transferred the sent of their Order to Rhodes and subsequently the sent of their Order to Rhodes and subsequently to Malta, whence the names 'Knights of Rhodes' and 'Knights of Malta,' by which they are also known. The French branch disappeared at the Revolution of 1789. The German branch was restored by Frederick William IV., king of Prussia, about 1850, and still exists under the name of 'Johanniter-Orden.' The English branch, which was abolished and had its wealth confiscated by Henry VIII. was reorganized in 1826. Its special Henry VIII., was reorganized in 1826. Its special work is the supervision of convalescent homes and small country hospitals, and the training of sick nurses for the poor. The English Joannites were of invaluable service to the wounded in the Transvaal war. In imitation of the Joannites the 'Hospitallers of the Holy Spirit,' the 'Hospitallers of St. Lazarus' to tend lepers, the 'Hospitallers of St. John of God,' an Order founded in Granada (Spain) by a Portuguese of that name (d. 1550), etc., were formed.

In the Christian Church the care of the sick has never lieen confined solely to men, but both in the primitive Church and during the Middle Ages was largely participated in by women; so that the number of Orders of Hospital Sisters exceeds that of the Brethren. Among the oldest and most famous, mention is due to the society of 'Hospital Sisters of the Hôtel-Dieu' (of Paris), known as 'Augustine Sisters' (beginning of the 13th cent.), 'Augustine Sisters (beginning of the 15th cent.), the 'Handriettes,' the 'Ladics of the Hôtel-Dieu' of Beaume, the 'Filles-Dieu' of Orleans, the 'Sisters of St. Thomas' of Villenenve, and especially the 'Sisters of Charity,' organized by St. Vincent de Paul to assist the 'Dames de Charité' in the pursing of the side and obliged to remain in the nursing of the sick, and obliged to remain free from monastic fetters.

Hospices and almshouses were also established near the famous pilgrimage places, to afford shelter to the numerous pilgrims visiting them, e.g. at St.

Jacques de Compostella in Spain, Onr Lady of Loretto in Italy, and Onr Lady of the Hermits in Switzerland (Einsiedeln).

The 'Maladreries,' 'Mozelleries,' or 'Hospitals of St. Lazarus,' special homes for lepers, constituting a branch apart from hospitals, do not de-

mand attention here.

5. Hospitality in modern times.—It may be said that individual hospitality has decreased practically in direct proportion to the advances achieved in the means of transport and the number of hotels. It is, however, still practised to a considerable extent in Eastern countries and in the north of Europe, e.g. Scotland. But, if private hospitality has diminished as a result of civilization, public hospitality, on the other hand, has advanced with rapid strides not only by developing existing charitable institutions, but by creating new and very ingenions methods of relieving the sick and destitute.

This leads us to subdivide the remaining discussion into two parts: (1) the development of ancient institutions; and (2) the formation of new

methods of relief.

(1) The ancient xenodochium has been transformed into various kinds of night refuges. As early as the 12th cent the Hospital Sisters of St. Augustine in Paris were in a position to provide three hundred vagrants with three nights' lodging in their convent of 'Blancs-Manteaux,' Destitute women were received in St. Catharing's Home in I replaced Street received in St. Catherine's Home in Lombard Street. In 1872 Massabo founded the first night refuge at Marseilles, and his example was followed by Lamaze and the Philanthropic Society, who opened large and the rimanulopic society, who opened large night shelters for men and others for women in Paris (1878). The municipal board of Paris, the municipalities of London, and most of the European capitals, following in their train, opened various night shelters. The Salvation Army has distinguished itself in this respect.

As a result of the reforms started in England by John Howard and Florence Nightingale, and in France by La Rochefoucauld-Liancourt, Tenon, etc., the ancient nosocomium has developed into the modern hospital with all its hygienic im-Before these reforms the best organprovements. ized hospitals were military or lazaretto hospitals. At the end of the 18th cent, the public hospitals in

1 The Swiss hold the first rank in the management of hotels. At Ouchy, near Lausanne, they have built a normal school for hotel managers, which is admirably organized, and is attended by young people from all countries.

2 There is still a street of 'Blancs-Manteaux' in the Temple curvater of Paris

quarter of Paris.

France had reached such a depth of decay that they were dreaded by the poor, and deservedly called forth the censure of philanthropists and the

complaints of medical men.

complaints of medical men.

'You have in Paris,' wrote Voltaire to Paniet on 22nd April 1763, 'a hospital (Hötel-Dieu) where perpetual contagion reigns, where poor invalids huddled closely together infect their neighbours with the plague and death.' Michelet, tha distinguished historian of ancient Franca, is equally hitter. 'Ancient hospitals,' he says, 'were exactly like reformatories. The sick poor and prisoners confined in them were generally regarded as culprits struck by the hand of God, whose first duty was to atone for their sins, and they were subjected to cruei treatment. Charity of such a dreadful kind arouses our horror. An attempt was made to dispei the terrors of the hospitals by adorning them with enticing names, such as "Hôtel-Dieu," "La Charité," "La Pitié," "Le bon Pasteur," hut that did not succeed in imposing upon poor invalids who hid themseives to die at home, so terrified were they at the thought of being forcihly dragged into these places.'

At that time the insane were chained in their cells, and such was the terror inspired by these victims of insanity that they were believed to he 'possessed by the devil.' Dr. Pinel showed great courage in hreaking the chains (1792-94).

In England John Howard (d. 1790), who is well

In England John Howard (d. 1790), who is well known on account of his remarkable zeal, took the initiative towards reforming hospitals, and in France that step was taken by the Academy of Sciences. The fire which took place in the Hôtel-Dieu in 1784, and burned to death several hundreds of the inmates, roused a wide-spread feeling of pity and indignation. £80,000, a large sum at that time, was collected by public subscription for the reconstruction and improved sanitary arrangements of this hospital. The committee appointed the referred to t hy the Academy of Seienees for the reform of public hospitals numbered in its ranks such philanthropists as Bailly, the Duke of La Rochefoneauld-Lianeourt, Tenon, etc. The memoir written by Tenon (1787) is a master-piece of technical brawledge and contrage denouncing the nical knowledge and conrage, denouncing the horrors referred to by Voltaire. The 'Convention' appointed a committee to carry out the proposed reforms, but the Revolution and the wars of the Empire prevented the realization of Tenon's seheme. Nothing more was achieved until Louis l'hilippe's reign. Then the Count of Rambuteau, l'hilippe's reign. Then the Count of Rambuteau, prefect of the Seine department, ordered preparatory investigations concerning the rebuilding of the Hôtel-Dieu, which, however, was not actually achieved until the reign of Napoleon III. (about 1866-68). We would call special attention to the most recent improvements, especially in the maternity and surgical wards of hospitals, resulting from Pasteur's discoveries and Lister's antiseptic method.

Institutions for the maintenance of widows and orphans are as old as the Church. Wherever there was a Christian community it regarded the assistance of those unfortunates as its first duty. there are several ingenious modern methods of this kind of aid, which we shall merely mention. Having noticed the disadvantages of a widow having to live alone while her children were sent to an orphanage, some philanthropists gave her pecuniary assistance, enabling her thereby to keep her children at home, and to preserve the family tie intact—a state of affairs beneficial to both mother and children. It was this idea that gave rise to the 'Œuvre des petites Familles' founded in Paris in 1891. Its aim is to bring together orphans of both sexes and all ages in a house where they are under the care of a Christian matron, who treats them as if they were her own children. Here they receive manual instruction, one of the regulations being that every orphanage must have a workshop connected with it.

1 The Hôtel-Dien in Paris had become a sort of caravanteral, open to all poverty-stricken, aged, disabled, and vagrants of both sexes, whether they were ill or not. No fewer than 6000 people took refuge there, and it was quite an ordinary occurrence to have three or even four invalids lying in one bed.

2 Ct. the 'Œuvre des Veuves' founded by Ed. Vaucher in Paris 1803.

Ever since the Middle Ages the monasteries have hospitably opened their doors to such fallen women as have repented, and, endeavouring to hide their shame, are making a fresh start. Robert d'Arbrissel, the eelehrated preacher of repentance, founded the Order of Fontevrault. One of the convents of this order, St. Magdalene's, was specially set apart for fallen women. In more recent times this admirable work of hospitality and moral aid has been earried on hy the Roman Catholic 'Good Shepherd's Nnns,' the Anglican and Protestant deaconesses of Kaiserswerth, and the female officers of the Salvation Army; and to-day it is being done by the resene-work of the 'Home of Fantine,' founded by Madame d'Avril de St. Croix, and hy R. Bérenger's 'League for the Suppression of the Trade in White Women.'

The aged also, afflicted by poverty and infirmities, have at all times aroused the compassion

of the faithful. At one time they were received in certain of the monasteries; nowadays there is no town of any size which does not possess its home for the aged. A new feature introduced into these homes in the 19th cent. was the keeping together of old couples, and the association of widows and widowers with young children, so that the melancholy of their old age might be brightened by the happiness of youth. We may mention as examples of the former kind the 'Asile des petits Ménages' at Issy, near Paris, built on the site of the ancient 'Hospital for Lepers' of St. Germain (founded in 1100) and the 'Home of Sainte Périne' in Paris, and as a type of the latter the 'Asile protestant de Nanterre' for old women and little girls.

(2) Among modern forms of hospitality the most noteworthy is what is known as the workhouse—a combination of refuge and workshop. The idea, however, is not quite new, for, even before the French Revolution, workshops had been opened in times of poverty to enable the poor to earn a

livelihood.

livelihood.

'But,' says Louis Rivière (L'Assistance par le travail à Paris, 1895), 'the characteristic featurs of our time consists of a new element, the effort to impart a systematic organization to this method of relief, so that the poor man may obtain something more than pecuniary assistance. All these institutions have a common aim: in the case of an able-bodled pauper, instead of alms, which are degrading and encourage idleness, they substitute ennobling work—provisionally, however; for, although sufficiently renumerative to ensure a livelihood, it also stimulates the desire to obtain something better. The work is compensated either by food and iodgings or hy wages.'

This method of aid, hospitality in return for work, has been applied on a very large scale by F. von Bodelschwingh in his admirable settlement near Bielefeld in Westphalia and by J. Rostand at Marseilles; and in Paris large workhouses for women have been founded by Mesdames Suehard de Pressensé and Risler and Léon Lefèbure, and for men by A. Robin and the Earl and Countess of Lambépin.

Connected with these institutions there are homes for convalescents and for worn-out working men. To the former class belong the Villa Helvetia' at Mentone and the National Shelters at Vincennes and Vésinet founded by Napoleon III., and, in the second, mention is due to the Sailors' Homes established in Great Britain and other countries, and maintained in order to provide a home for homeless sailors returning from long and perilons voyages. There, under the care of a matron, they find comfort for body and soul.

The eare of children is a characteristic feature of our times, especially of the French nation, which has shown its ingennity in inventing, in addition to orphanages, other new methods of hospitality to children. In the first rank stands the institution of 'Crèches' (infant asylums), founded

1 'Œuvre du Travall,' as it is called, in the Rue de Berlin, 1855. 2 'Asile temporaire ponr des Femmes' (1883). 3 'Œuvre de l'Hospitalité par le travail à Belleville et à Passy.

in Paris in 1844 by Firmin Marbean, and now extending their privileges to the children of more Their aim is than two hundred European towns. to nurse and feed young infants whose mothers have to go out to work. To this class belong the 'Crèche Furtado-Heine' and the 'Asile Léo Delibes' in Paris, the 'Pouponnière' in Versailles, etc. The children's shelters established at St. Maur-les-Fossés (near Vincennes) differ from infant asylums in re-ceiving children from two to seven years of age, and not only by the day, but for several years, as long as their parents are unable to attend to them.

The services done by the 'Colonies de Vacances,' started by L. Bion at Zürich and imitated in Paris, scarred by L. Bion at Zurich and imitated in Paris, Berlin, etc., and by the 'Enfants à la Montagne' organized by Louis Comte, a St. Etienne clergyman, which aim at enabling the delicate and weakly children of large manufacturing towns to get the benefit of country air and good food, are also worthy of the greatest praise. But still more to be pitied than the children of the warking-alegor to be pitied than the children of the working-class poor are those wretched little ones whom Jules Simon called 'orphans whose parents are still alive.' Homes for such children were founded in London by Dr. Barnardo, in Liverpool by James Nugent, and at Ashley Down, near Bristol, by George Müller; and in Paris Mesdames A. de Barrau and Kergomard established homes and proffered hospitality and education to the poor creatures who were the victims of unnatural parents.1 Thousands of these children have by this means been prevented

from becoming thieves and criminals.

Children whose detective instincts or undisciplined nature resisted both physical and mental instruction used to be sent to 'Reformatories,' where they often became more corrupted than before by bad company. Attempts have been made to improve this state of affairs by founding agricultural schools at Mettray (at the junction of the Indre and the Loire) and at La Force (on the Dordogne), where nilitary discipline and agricultural work have succeeded in taming the most ungovernable natures.

But more important than all these ways in

But more important than all these ways in which modern hospitality has displayed its excellent spirit is its solicitude for young women and girls in search of employment. Many associations, differing in name but having in common this spirit of charity, vie with each other in the enthusiasm with which they not only provide homes for lonely girls, servants, or governesses in search of work in Paris, but also give them valuable advice and secure situations for them in shops and good families. Such are the 'Union internationale des Amies de la jeune Fille,' which has branches in all the European capitals as well as in Paris, the 'Amicitia' club, the 'Adelphi,' and the 'Restaurant pour Dames seules.

And, lastly, it is an almost incredible fact that charity has not given up hopes of curing what was thought to be an absolutely incurable vice, drunkenness. Establishments have been opened in Switzerland, France, England, Sweden, etc. for the cure of inebriates, and in spite of great diffi-culties they are beginning to obtain encouraging

HOSPITALITY (Greek and Roman).—Hospitality is the name of a relation and of a quality. In Greek the relation is expressed by  $\xi \epsilon \nu i a$ , the quality by  $\phi i \lambda \alpha \xi \epsilon \nu i a$ ; in Latin the corresponding words are hospitium and hospitalitas. It is with hospitality as a relation that we shall first be concerned. In both Greece and Rome the relation was one between members of different States, and it held between families rather than individuals, or, it might be, between a family or individual and a State. This gives us a division of hospitality into private and public. In relation to private persons a man was called in Greek & fros, in relation to a State πρόξενος; and the like distinction held between ξενία and πρόξενοι.¹ In Latin the one word hospitium, with its concrete hospes, was used for both private and public hospitality. There are some relations, like that between father and son, in which, the relation not being the same on both sides, a different word is required to express each of the terms. But, as the relation of hospitality was reciprocal, he who was host be-coming guest in his turn, the Greeks and Romans were content with one word (ξένος, hospes) to cover both sides of the relation, like our words 'brother,' 'cousin.'2 We, however, have differentiated the two words, 'host' and 'guest,' which come ultimately from the same root, in order to distinguish the two sides of a relation which is not with us so necessarily convertible as it was with the ancients. When the Greeks found it convenient to distinguish, they expressed the entertainer by the word

ξενοδόκοs, leaving ξένος for the person entertained. The word ξένος, dialectic forms of which are ξείνος, ξέννος, is probably connected etymologically with Lat. hostis, being for \*gzhenvos, \*ghs-en-uos; and, like hostis, it means originally an ontsider or foreigner of some sort. Herodotus twice notices the Lacedæmonian use of the word in this its primary sense, as equivalent to βάρβαρος. When Amompharetus plumped down a big stone before the feet of Pausanias, he exclaimed: 'With this pebble I give my vote not to run away from the foreigners' (rods felvous).

Cicco tells us that the word hostis meant originally nothing more than peregrinus, quoting the Twelve Tables in support of his assertion, which philology sanctions by connecting the Latin hostis with the German Gast. Cicero draws a conclusion as to the mildness of the early Romans, who called their enemies nothing worse than 'strangers,' though they might have called them perduelles. Others, however, might argue from the same philological fact that the Romans failed to distinguish between strangers and enemies.

Hospit-, the stem of hospes, is regarded by philologists as a contraction for hosti-pet; but as

<sup>1</sup> Special mention is due to the 'French Union for the Rescue of Children,' under the direction of C. Gayte, and the 'Patronage of young Protestant boys in moral danger,' founded by A. Robin and managed by Etienne Matter, which provide homes for children in the country, where they are taught various trades.

<sup>1</sup> Athen. xiii. 81, p. 603 f.: Έρμησίλεω δὶ, ξένου οἱ ἐόντος και προξένου λθηναίων.

2 The teminine οἱ ξένος was ξένη, οἱ hospes, hospita (Plato, Laux, xii. 953 D: ὑποδέχεσθαὶ τε χρὴ πάντας ξένους τε καὶ ξένας ξὲ ἄλλης χώρας; Cic. Vert. Π. ii. 24: 'temina primaria Servilla vetere Dionis hospita').

3 0d. viii. 542 l.: iν ὁμῶς τερπώμεθα πάντες ξεινοδόκοι καὶ ξένος. Ci. Ii. iii. 854; Od. viii. 210, xv. 54 l. In Homer ξένος and its derivatives always appear in the Ionic forms ξένος, etc. 4 K. Brugmann, Gr. Gramm. 4, Munich, 1913, p. 112.

5 Herod. ix. 55: ξείνους λέγων τοὺς βαρβάρους. Cl. ix. 111 ξείνους γὰρ ἐκάλεον τοὺς βαρβάρους. Cl. Pint. Aristides, 10.

to the meaning of the latter element there is a difference of opinion. According to some, it is from pa-, the root of pasco; according to others, it is connected with pot-, as seen in the Latin potens. On the former assumption the word would mean 'feeder of guests or strangers,' on the latter 'guestmaster,' i.e. master of the house in which guests are entertained (see below, p. 818 f.). In early society, when there was not an Imperial Hotel in every hig town, hospitality was one of the most important of the relations of life.1

The first point to notice about this relation is that it was extra-political. It carried a man beyond the hounds of his own State, and so was the beginning of the brotherhood of man. all around was hostility or indifference, it was something to feel that there was one foreign city where one's warmest welcome would not be at an inn.

Secondly, the relation was reciprocal, which led one to do as he would be done by. If one were host to-day, he would be guest to-morrow, or, let us say, next year, and dependent for his comfort and well-being on the man whom he was now entertaining. 'And I myself,' says Admetus, 'find in him a most excellent host, whenever I come to the thirsty land of Argos.' Odysseus in the Odyssey is made to utter a shrewd remark about the stupidity of contending in games with one's host.

Thirdly, the relation was hereditary, descending from father to son. When Glaucus in the *Iliad* had declared his pedigree, Diomede recognized that the tie of hospitality had been contracted between his own grandfather, Eneus, and Bellerophontes, the grandfather of Glaucus. 'Why, you are my old hereditary guest-friend l'he exclaims; and so, amid the war of nations, the two heroes conclude a private peace, agreeing to avoid cach other's weapons. The beautiful episode of Glanens and Diomeda while from the next the next to be a single production. and Diomedc, while from the poet's point of view it serves the purpose of filling up the time until Hector returns to the field, having discharged his mission to Troy, has from our point of view the recommendation of throwing a vivid light on the early importance of the tie of which we are speaking. Again, in the Odyssey when Athene, under the guise of Mentes, wishes to gain the confidence of Telemachus, she tells him that they are hereditary guest-friends, adding that he can go and ask his grandfather Laortes about the matter. As a matter of fact, this assertion is untrue, as is that in Od. xvii. 522, where Odysseus, disguised as a beggar, claims to be an hereditary guest-friend to himself, hut it is illustrative of the fact without which it would lose its meaning. In Od. xv. 195-198 we see how the consciousness of hereditary affection makes the hearts of the young Telemachus and of Nestor's son Pisistratus warm to one another.

A fourth point to notice about the relation of hospitality is that it was inaugurated and accompanied by an interchange of gifts. On the dispanied by an interchange of gifts. On the discovery that they are gnest-friends, Glaucus and Diomede exchange armour on the field of hattle, which gives occasion to the canny saying of

Homer:

Then Glaucus of his judgment Jove deprived, His armour interchanging, gold for brass, A hundred oxen's worth for that of nine.'

In the Odyssey the first thought of Telemachus, on heing told that Mentes is an hereditary guestfriend, is to press some keepsake upon his acceptance.1

Fifthly, the parties to the relation seenred themselves against impostors by the device of tickets, which were broken between them, one part heing retained on either side. σύμβολον was the Greek word for a ticket of this kind, and we find Plautus speaking of it as hospitalis tesscra.2 Probably this custom grew np in post-Homerio times. If so, Euripides is guilty of an anachronism when he makes Jason offer such hospitality-tickets to Medea, for her to present to his guest-friends. Crito, the contemporary of the poet, might have adopted this method of securing the welfare of Socrates, had that philosopher availed himself of the means provided for his escape into Thessaly.

Lastly, the relation of which we are speaking was no light expression of casnal goodwill, but a solemn engagement which had the sanction of The Supreme God in one of his aspects religion. presided over it, so that we hear of Zein Zérios and Jupiter hospitalis. What made the offence of Paris so rank, in carrying off Helen, was that it was a violation of the rights of hospitality; and what added a darker horror to the crime of Ægisthus was that he first gave a banquet to Agamemnon and then slew him as one slays an ox in the stall.6 It is worth noting that Herakles, who ended by being the greatest saint in the Stoic calendar, started on his career by being a bad man, who slew a guest in his own house.

Besides indicating the special relation of which we have been speaking, the word Eéros signifies also any stranger or foreigner as opposed to acros, πολίτης, έπιχώριος. Hence the address ω ξένε was used like the American 'stranger.' Men did not travel much for pleasure in early times, for that was to cut themselves off from the social organism, of which they were part, and expose themselves to the merey of strangers. If a man were found wandering about in another country, he had generally some very good reason for having left his own. Perhaps he had killed some one, whether hy accident or design, or had in some way made himself obnoxious at home. At all events, he was helpless now, and to the credit of human nature he it said that the appeal to pity is seldom ineffectual. In oarly Greece, as among the Jews, there was a strong sentiment in favour of tho protection of strangers. Any wanderer or refugee was regarded as being under the protection of Zeds Eérics; nay more, the helper of the helpless, Zeds 'Isécics, extended his care over him. This sentiment finds strong and frequent expression in the Odyssey. It is remarked, indeed, of the Pheacians that they have no fondness for strangers, hut even they treat their unknown visitor royally, when once they have accepted him as a suppliant. Had we not the authority of Athene for the statement, we night be surprised that the Pheacians, of all people, should display an aversion from strangers, considering how fond they were of visiting foreign lands. The Cyclopes are a grnesome exception in the Homeric world to the general regard displayed for strangers, but then they are not men but monsters. The inhospitality of the Taurie Chersonese is heyond the ken of Homer. Human sentiment, when it lacks

<sup>1</sup> In Græco-Roman times the accommodation for travellers does not seem to have been very good—partly perhaps on account of the very system of ξενία, or hospitium, of which we are speaking. The various words in Greek and Latin for a place of entertainment do not connote more than our word inn "-πανδοκείον (Aristoph. Ran. 550), καταγώγιον (Thuc. iil. 68), κατάλυσις (Herod. v. 52), κατάλυμα (NT); hospitium, derorsorium (Olc. Cat. Mai. 84), caupona (Hor. Epist. 1. xi. 12), talerna (Cic. Inc. ii. 14).

efficiency, clothes itself in a religious sanction, and appeals to the powers of heaven in favour of what is not, but ought to be. There are many stories which point the moral how the God of Hospitality and the God of Supplication (Zeds Eérics and Zeds 'Ikécics) cannot be flouted with impunity. Folklore also declared that the gods assumed the likeness of strangers, and went up and down in the world to keep watch upon the ways of men. The outrageousness of the offence committed by Antinous, when he hurled a stool at the wandering beggar who asked for alms, stands out in high relief when we find that even the unruly suitors were shocked at this conduct, and that it is one of them who expostulates with him thus:

'Antinous, thou hast not done well to hit the unhappy wayfarer, accursed man, if indeed there he a god in heaven! And gods in the likeness of strangers from other lands, taking all sorts of forms, roam about among the cities, keeping watch upon the violence or good behaviour of men.'

Thus, in the Hellenic as in the Hebrew world, one might in exercising hospitality be 'entertaintime, in the cities of Lycaonia, there was vitality enough in the idea of 'gods coming down in the likeness of men' to lead to practical expression in the way of sacrifice (Ac 14<sup>11</sup>). It was the same district which was the same district which was the scene of the story of Baucis and Philemon, who entertained at table Jupiter and Mereury.<sup>2</sup>

That there is more about hospitality in the Odyssey than in the Riad is probably due to the nature of the subject-matter—the one dealing with peace, and the other with war. When the envoys from Agamemnon come to Achilles in *Riad*, bk. ix., the first thought of that hero is to call to Patroelus for a bigger bowl and a stronger mixtnre, together with a cup for each. Patroelus' own forethought supplies such trifling accessaries to the feast as the chine of a sheep, a goat, and a fat hog. The carnivorousness of the Achean a fat hog. heroes, we may note in passing, stands in strong contrast with the temperate, and almost vegetarian, diet of the Athenians. When Priam comes as a suppliant to Achilles, in bk. xxiv., he is met with the same prompt and sheep-slaying hospitality; but the hero, aware of the uncertainties of his own temper, has to warn the old man to avoid irritating him, lest he should forget, even in his own hut, that he is dealing with a suppliant, and might thereby transgress the commands of Zeus.4

The politeness of an Homeric host required that he should feed his guest before he asked who he was. This is an excellent rule. For, in the first place, it is a tax upon one who is tired and hungry For, in the first to have to talk at all; secondly, the host makes it plain that his kindness has no respect of persons; and, thirdly, if it should be an enemy that he is entertaining, he will find it more difficult to hate

him after doing so.<sup>5</sup>
Gifts, as has been said already, were usual between the parties who entered into a formal relation of hospitality. But, besides this, some dole or gift seems to have been regarded as the right of any stranger as such. The value would, of course, vary with the importance of the stranger and the disposition of the donor. Odysseus at first expects to get some such gift even out of the Cyclops. As a beggar he does get meat and drink from Nausicaa, with the remark on her part that 'all strangers and poor are from Zeus, and a gift, though small, is welcome '; 7' but, when his name and tame have become known to the Phancians, he receives

1 Od. xvii. 483-487. 3 Il. ix. 202 f. 5 Od. iv. 60-62; cf. i. 123 f. 7 Ib. vi. 207 f.

parting gifts from them which show their appreciation of his dignity. Menelaus also on his travels picked up much wealth from presents.1 In fact, we derive from the Odyssey the impression that in those days (but then, when were they?) travelling on the part of a distinguished man was a source of gain, instead of expenditure.

Among the Romans, as among the Greeks, the formal relation of hospitality was inaugurated by the interchange of gifts, either in person or by proxy. So Servins tells us; <sup>2</sup> and the poet himself illustrates his commentator when he makes Evander ready to receive overtures of alliance from Æneas, on the ground of the gifts which he had received as a lad from the hero's father, Anchises. As among the Greeks, also, the relation was kept up from father to son, and might be contracted with the most distant potentates; for instance, we find that Pompey was on terms of hospitality with King Juba; and Mareus Metius, an obscure person, with Ariovistus.5

The words of Ovid descriptive of the Iron Age— non hospes ab hospite tutus's—are eloquent of the sanctity which in Roman opinion attached to the tie. There is an interesting discussion in Aulus Gellius as to whether hospitium or clientela came next after one's obligations to parents and to wards. He cites Massurius Sabinus, a writer on civil law, as giving the preference to hospitium over clientela; and we find Cornificius, in his treatise addressed to Herennius, putting the duties of life in the same order. The generally accepted order of claimants, however, was this: parents, wards, clients, guest-friends, kinsmen, connexions. As the relation of hospitality was one which, from the nature of the ease, came into operation only at intervals, it was naturally sometimes of a ceremonious character, not implying personal intimacy. P Herodotus tells us that no States were ever so

closely connected by ties of hospitality as Sybaris and Miletus; 10 and some language of Plato in the Laws 11 would lead us to think that there were sometimes formal relations of hospitality between State and State, so that the children of one were taught to look upon the other as their second country; but the public hospitality of which we hear most was an unequal relation—between a State or tyrant on the one side, and a family or individual on the other. A mpbers was a person who undertook to look after the interests of a foreign State in his own. He thus differed from the modern 'eonsul,' who, as a rule, is a person who looks after the interests of his own State in a foreign one. The  $\pi \rho \delta \xi \nu \rho \sigma$  was sometimes appearance. in a foreign one. The  $\pi\rho o\xi \epsilon ros$  was sometimes appointed by the State; sometimes he appointed himself, in which case he was an  $\epsilon\theta\epsilon \lambda o\pi\rho b\xi\epsilon ros$ , <sup>13</sup> or honorary consul. At Athens the people appointed their  $\pi\rho b\xi\epsilon ros$ ; <sup>13</sup> at Sparta the appointment was one of the privileges of the kings. <sup>14</sup> Sometimes

mpošeros. 12 Thuc, iii. 70. 13 Ib. ii. 20. 14 Herod, vi. 57. there was a salary attached to the position, as we know from the Corcyraan inscription, which eontains an account of lands purchased by the State for the use of its  $\pi\rho\delta\xi\epsilon\nu\omega$ . But in most cases the office seems to have heen assumed voluntarily by men of wealth and station, the attraction of international importance being reward enough in itself for the honour-loving Greck. Thus we find Alcibiades resunting the hereditary προξενία with the Lacedæmonians which his grandfather had for some reason renounced.2 As the πρόξενος would naturally be a persona grata with the State whose interests he espoused, delicate negotiations were often con-ducted through him. Thus, when Mardonius wished to detach the Athenians from the cause of Hellas, it was Alexander of Macedon that he sent to them as being their  $\pi \rho b \xi \epsilon \nu \sigma s$ . When, in the time of the Four Hundred, the Athenians were near coming to blows with one another while the foe was without the gates, it was mainly through the good offices of one of their πρόξενοι, Thucydides of Pharsalus, who happened to be present, that their rage was checked. But the action of πρόξενοι was not always advantageous to the State to which they belonged. Thus we learn from Thueydides that the revolt of Leshos broke out prematurely owing to information being supplied to Athens by the  $\pi\rho\delta\xi\epsilon\nu\alpha$  of what was going on in the island. The institution of  $\pi\rho\delta\xi\epsilon\nu\alpha$  was a wide-spread and important feature of Greek life. Even the barbarous tribe of the Mossyncei had their πρόξενος in Timesitheus of Trapezus, through whom they were approached when Xenophon wished to pass through their country. The connexion of this institution with hospitality in the modern sense lies in the fact that it was at the house of the πρόξενος that foreign ambassadors would naturally be entertained.7

Among the Romans we find from the earliest times the same distinction as among the Greeks between public and private hospitality. Livy speaks of Servius Tullius as having linked himself in both ways with the leading men among the Latins. We read, too, how in the time of Camillus one Timasitheus persuaded his Liparensian countrymen, despite their piratical instincts, to let a Roman offering, which fell into their hands, get safely to Delphi; and how, in return for this service, hospitality was voted to him by decree of the Senate, and gifts were presented by the State. There is also a picturesque tale told by Livy, which reminds us of the episode of Glaucus and Diomede. The moral is the same, though the treatment is different. In 212 B.C., at the siege of Capua, there was a Roman named Crispinus and a Capuan named Badius, who were connected by ties of hospitality, insomuch that Badius had been nursed through an illness in the house of Crispinus. What, then, was the surprise of the worthy Roman to find himself challenged to single combat by his Capuan guestfriend! No taunts could make him light, until Badins renounced the tie of hospitality. Then, by permission of his commanders, he took the field on horseback—to the shameful overthrow of his adversary.10

The year 173 B.C. is noted by Livy as marking a turning-point in the treatment of the allies in the matter of hospitality. One of the eonsuls of that year having previously had occasion as a private person to visit Preneste, in order to sacri-

fice in the temple of Fortune, had been mortified by receiving no marks of honour there, either in public or in private. So, when sent on a public mission with regard to the State-lands in Campania, he prefaced his coming by a letter to the Prænestines, ordering that the magistrates should come ont to meet him, that quarters should he prepared for him at the public expense, and that baggage-animals should be ready for his departure. Up to this time, Livy tells us, the highest magistrates had been content with *privata hospitia* when they visited the allies, but this action served as a preeedent for ever-growing demands of the same nature.1

Turning now to hospitality as a good quality or virtne, it is obvious to remark that it is a form of good will to men which finds most scope for its exercise, and is consequently most highly valued, in a comparatively rude state of society. The Homeric outlook upon the world makes this the criterion of praise or condemnation-

η μέν όσοι χαλεποί τε και άγριοι, οὐδε δίκαιοι, οι τε φιλόξεινοι, καί σφιν νόος έστι θεουδής.2

In classical times it was the backward country of Thessaly that was most noted for hospitality. Xenophon speaks of Polydamas of Pharsalus as being 'magnificent in his hospitality after the Thessalian fashion.' Admetns, we may remember, whose virtues in other respects were not conspicuous, had this redeening feature in his character. His house could be addressed as-

δ πολυξεινος καὶ ελευθερος ἀνθρὸς ἀεί ποτ' οἶκος.<sup>4</sup>
When Crito, in Plato's dialogue of that name, wishes to get Socrates out of prison, and to send him to his friends in Thessaly, the philosopher is made to reply with some dispuraging remarks about feasting in Thessaly, implying that he was of the same opinion as that afterwards expressed by the historian Theoponipus, that the Thessalians were more anxious about a well-laid table than a well-ordered life.\* In other parts of Greece the practice of hospitality must have been rarer, if we may judge from the story of how Miltiades in the time of Pisistratus became tyrant of the Chersonese. Some Dolonkian envoys to Delphi had been instructed by the oracle to take as a new founder of their State the first man who offered them hospitality after they left the temple, and they traversed the whole of the Sacred Road through Phocis and Bœotia without receiving an invitation; it was not till they turned aside to Athens that Miltiades, seeing them as he sat in his doorway, shouted to them to come in; and, after he had entertained them, they communicated to him the oracle, and pressed their leadership upon his acceptance. The importance attached to hospitality in uncivilized eommunities is due to that instinctive perception of the needs of men which underlies ethics. In a more developed society it becomes a rich man's virtue, a kind of moral luxury, rather than a necessity. By Aristotle it is brought under the head of 'magnificence,' which displays itself, among other things, in the reception and dismissal of strangers.8 Magnilicence is a civic virtue, and the entertainment of illustrious guests is a glory to the State, on which grounds Ciccro remarks: 'recte etiam a Theophrasto est laudata hospitalitas.' In the Economicus of Xenophon, where the burdens upon the rich at Athens are heing discussed, special mention is made of the social necessity of entertaining many foreign guests, and that too magnificently. 10 The obligations of nobility in this respect were so well recognized at Athens that Solon includes a foreign guest among the

Όλβιος, ψ παΐδές τε φίλοι, και μώνυχες ίπποι και κύνες άγρευται, και ξένος άλλοδαπος. 1
In the Meno of Plato also to know how to receive and dismiss fellow-countrymen and strangers in a manner worthy of a good man'2 is reckoned among the accomplishments of an aspirant to public life. Callias, the son of Hipponicus, was celebrated at Athens for his princely hospitality; and at Sparta, Lichas, who was mobseror to the Argives, but extended his welcome to all strangers who were present in Sparta at the Companyed in Sparta a sent in Sparta at the Gymnopædiæ.3

LITERATURE.—In addition to the sources cited in the article, see the treatment of the subject in Smith's Dict. of Gr. and Rom. Ant., by W. Wayte, L. Schmitz, and H. Hager; and in R. von Ihering's 'Gastfreundschaft im Altertum,' in Deutsche Rundschau, 1887.

ST. GEORGE STOCK.

HOSPITALITY (Hindu).—Under the conditions of Hindu law and social usage the exercise of hospitality in the ordinary sense of the term, when the host shares with his guest a meal or provision which he has himself furnished, is necessarily precluded. A rigorous and minutely divisive law of caste has long forbidden in India that the stranger, or one not born within the inviolable and usually narrow limits of the caste (jāti, 'birth'), should be welcomed to a place at the family meal. In this aspect of the subject, eating in common is entirely repugnant to Hindu feeling and thought; it is inconceivable and impossible that members of different castes should partake together of the same food. And the rule or prejudice, together with that against intermarriage, will be among the last to yield to the solvent of European practice and example.

In all other respects the duty of hospitality is fully recognized, and, subject to this important limitation, adequately discharged by all Hindus. Probably in no country in the world may the passing wayfarer be so confident that his needs will be met in whatever village he may find himself, although the provision will not go beyond the minimum of his requirements. Consideration for a guest is enjoined in the sacred Law-Books of India as an important part of the duty of a householder. It is true that it is generally assumed that the guest will be a Brāhman. In practice, however, the interpretation which has been given by the people themselves to their obligation has not limited it to one caste or group of castes to the exclusion of all others. The Brāhman has the exclusion of all others. always had the prior claim for the supply of his needs, whether in respect of food or of aught else; but the demands of hospitality are not repudiated by whomsoever they may be presented, though these others will be entertained with less satisfaction and with considerable abatement of ceremony.

A further condition which impedes the free intercourse and social communion which the dispensing of hospitality in the European sense of the term involves is that to the Hindu eating is a solemn and sacred religious act. Hence both the preparation and the partaking of food are hedged about with restrictions designed, in the first instance, to secure the ceremonial purity both of the food itself and of him for whom it is provided. To admit a stranger to a share in the meal, or even to allow the motions and acts of eating to be seen by another, would involve an almost certain risk of pollution. No strict Hindu will voluntarily and under ordinary circumstances eat otherwise than in private. A free and open hospitality, therefore, such as obtains in many countries, which invites the guest to an honoured place at the board, is, from this point of view, precluded by religious sentiment no less than by social custom.

1 Frag. iii., Gaisford.

2 91 A.

3 Thuc. v. 76. 3; Xen. Nem. i. 2. 61.

Apart, therefore, from anniversaries and festivals, and from private occasions for rejoicing, as a wedding or the birth of a son and heir, the lavish entertainment of guests on the part of wealthy natives of India, and of others according to their means, is limited to the feasting of Brāhmans, and the making provision for the poor at an open meal at which all comers may receive a share without question asked. In the latter case the distribution frequently takes the form of a money dole in place of or in addition to the food prepared. All such acts and gifts secure for the donor religious merit, and are often thank-offerings for public or private good fortune or success. They are evidently also more of the nature of alms or charity, the recipients being in poverty and real need of the benefaction, than of true hospitality (see art. CHARITY [Hindu]). The most recent instance of such donations has been the generous gifts for the poor placed at the disposal of Lord Hardinge, the Viceroy of India, in token of thanksgiving for his recovery from the attempt made upon his life at the Delhi Durbar of 1912.

In the formal and elaborate feasting of Brāhmans also the relation of host and guest is of a different nature. The sacred character of the Brāhman places him on a level socially and religiously above that of his host; and the latter may not, and does not, eat until his guests have been satisfied; nor would it be in accordance with usage or social right that he should sit down with them to a common meal. Thus to provide for the wants of members of the higher caste is a sacred duty incumbent upon the Hindu householder which is repeatedly enjoined in the Law-books. The obligation has often pressed hard upon the less wealthy members of Hindu society, and has been a not inappreciable or ineffective cause of the wide-spread indebtedness which has overtaken in the past so many classes of the Indian people. Usage and custom, fortified by religious sanction, has demanded an expenditure in the entertainment of guests at festivals or important events in the family life which has left the householder permanently and hopelessly impoverished; nor can real benefit be said to have accrued to any one from the practice, least of all to those members of the higher castes whom it has encouraged in a life of slothfulness and dependency. Nevertheless, the obligation has been generously recognized throughout the whole course of Indian life and history. And, if in part during recent years the responsibility has been somewhat less scrupulously interpreted and acted upon, the result is due to the general loosening of the best of a social system, which is found to be the bonds of a social system which is found to be out of harmony with European conceptions, and incompatible with the relations of a world-wide Empire.

HOSPITALITY (Iranian). - The obligation and the duties of hospitality appear to be taken for granted in the Avesta and Pahlavi writings, and no word for 'hospitality' is recorded.<sup>2</sup> At the

and no word for 'hospitality' is recorded.<sup>2</sup> At the 1 Cf. Manu, iii. 72: 'He who does not feed these five, the gods, his guests, those whom he is bound to maintain, the manes, and himself, lives not, though he breathes'; ib. 99f.: 'Let him offer, in accordance with the rule, to a guest who has come a seat and water, as well as food, garnished according to bis ability. A Brahmsan who stays unbonoured (in the house) takes away all the spiritual merit (of the householder).' The Brahman guest was always to be held in higher esteem, and given precedence in the entertainment of a member of a lower caste; the latter also was to be fed, but in this case hospitality was not obligatory, although apparently it was always recognized to he meritorious, and an indication of the good-will and virtue of the giver. See Manu, iii. 102-117 and lv. 29, on the duties of a householder.

2 Kanga (Eng. Ac. Dict., Bombay, 1909, col. 200) gives as equivalents of 'bospitality.' vasi-iti and vasi-vāiti (occurring

same time, it is indicated that, when one friend visited another, he brought a gift to his host (Yasna lxii. 8). The duty of giving not merely contentment, reward, and thanks (xsnūti, areti, vyādā), but also welcome (paiti-zanti), to a righteons man is declared, in Pursisnīhā, xxxix. (ed. J. Darmesteter, in Zend-Avesta, Paris, 1892-93, iii. 70), to be one of the three earthly things best for Ahura Mazda; and the duties of friendship—which is scarcely possible without some form of hospitality -are mentioned in the Avesta (Yasna xliii. 14, xliv. 1, xlvi. 2; Vendīdād, iv. 44-46), with special reference to the obligation of friend to succour friend. In a like spirit, generosity (frārāti, rāti) is lauded (Yasna lv. 3, lviii. 4, lx. 5; Vīsparad, xxi. 3; Pursišnīhā, xxvi.), and is the greatest of good works (Dīnā-ī Maīnōg-ī-Xrat, iv. 4, xxxvii. 4, tr. West, SBE xxiv. [1885] 26, 73), while illiberality is a sin (Vendīdād, xviii. 34; ef. Arṭā-ī-Vīrāf Nāmak xeiii ed and tr Haugand West Bombay Nāmak, xeiii., ed. and tr. Haug and West, Bombay, More than this, the spirit in which the gift is made is of the utmost moment. Accordingly, Nirangistan, lxxxiv. (ed. Sanjana, Bombay, 1894, fol. 161, l. 10-fol. 162, l. 27; Darmesteter, Zend-

101. 101, 1. 10-101. 102, 1. 21, Earliesters, 2011. Avesta, iii. 133 f.), declaires:

'Woe to him, Spitama Zarathuštra, who gives alms when his soul is not joyful over aimsgiving; for in aims lies for all the corporeal world the decision for good thoughts and good words and good deeds' (tr. O. Bartholomae, Alliran. Wörterb., Strassburg, 1904, cois. 1644, 733), adding that the best of all libations (zaothra) is to the teacher of religious truth.

Of the actual forms of Zaragstrian hospitality wa

Of the actual forms of Zoroastrian hospitality we may have a glimpse in Yast xxiv. 62-64 (expanded in Dīnā-ī Maīnōg-ī-Xrat, ii. 147-156), which states that, when the soul of the righteous man arrives in the heaven of Endless Light, it is not by the righteous dead (and by 'angels and archangels of every description'), who begin to ask it various questions, whoreupon Ahura Mazda bids that it have food and repose after its journey, and a seat on a richly adorned thronc. Even in hell the soul of the wicked receives food of filth before it is permitted to answer the questions of the older denizens (Dīnā-ī Maīnōg-ī-Xrat, ii. 183-192). Similarly, Artā-ī-Vīrāf declares (iii. 16 f.):
'To give the hangry and thirsty food, is the first thing, and afterwards to make enquiry of him, and appoint his task.'

It was another for the heat to rise when

It was customary for the host to rise when

greeting a guest (ib. xi. 1; Vendīdād, xix. 31).

The Greek authors add practically nothing to our knowledge of hospitality in ancient Persia, although there are repeated indications that wine was drunk to excess at banquets, and even that courtesans were admitted to them (Herod. i. 133, v. 18; Xenophon, Cyrop. vIII. viii. 10; Est 172. 56 72.74; for abundant classical references to Persian banquets, see G. Rawlinson, Fifth Orient. Monarchy, London, 1862, ch. iii.; A. Rapp, ZDMG xx. [1866] 101 ff.; cf. also B. Brisson, de regio Persarum principatu, ed. Lederlin, Strassburg, 1710, pp. 104, 223, 311, 465 ff., 797 f.; B. W. Leist, All-arisches Jus civile, Jena, 1892-96, i. 52). By far the best source for the details of Iranian

By far the best source for the details of Iranian hospitality is the Śāh-nāmah of Firdausī (tr. Moll, Paris, 1876-78). The great majority of the instances describe, it is true, the scenes in royal eircles and the receptions accorded to ambassadors, but there are also accounts which show that the hospitality of the humbler classes differed in degree

rather than in kind.

In general, if the guest was in rank inferior to his host, he respectfully saluted him (i. 234, 257), whereas, if the two were of equal rank, tho host

respectively in Yaena liii. 9 and xii. 3); but both words mean simply 'going as one wishes,' 'freedom of motion.'

1 The statement of Kohler (ZI'RW r. [1834] 336, note 2), that the Massagets, who were an Iranian people (J. Marquart, Erānsāhr, Berlin, 1901, p. 156), showed hospitality by lending their wives to their guests, is based on an erroneous interpretation of Herod. i. 216 (cf. Strabo, p. 513), who says merely that these Iranians practised communal marriage.

went to meet his guest (ii. 12, 58). It was a disgrace for the guest of honour to be seated at the left of his host (iv. 492). The host drank first if he was older and wiser than his guest, but the latter had precedence if he was of higher rank (v. 358). Intoxication at banquets, to which reference has already been made, is repeatedly mentioned by Firdausī (e.g. ii. 60, iii. 249, iv. 505).

The mode of procedure in royal hospitality may be illustrated by Firdausi's description of Rustam's return to the court of Kai Xusrau (iii. 211-214; ef. also i. 234-237, 257-267, ii. 59-64, 282 f., 423-428, iii. 229-231, 323-326, iv. 474-480, vi. 50-54; and, for a description of the hospitality shown ambas-

sadors from a foreign potentate, v. 291f.).

sadors from a foreign potentate, v. 291 f.).

When the king iearns that Rustam is approaching, he leaves the palace, while the people prepare feasts, adorned by wine, music, and singers. The monarch, with a great retinue, proceeds, scattering largess to the populace, until he reaches Rustam, who dismounts and salutes him. Xusrau embraces him and causes him to remount, and they return, conversing, to the palace. There Rustam is seated beside the king, who converses with him and his companions. Next follows the banquet, with wine and music. For a moath the festivities continue (in other cases hunting and games add to the enjoyment), and at the end of that time Rustam annouaces his wish to depart. Thereupon, Xusrau bestows rich presents upon him, and accompanies him a two days' journey, when Rustam again dismounts, and takes formal leave of the king, who roturas to his palace.

Among the middle classes the usages were not.

Among the middle classes the usages were not dissimilar. Bahram Gür, in disguise, knocks at the door of a jeweller. He is at once admitted most hospitably, and is entertained at an impromptu feast, after which come wine and music, the cupbearer and lutist being the host's beautiful daughter, whom the guest, whose identity is known only on the following day, promptly espouses (v.

only on the following day, promptly espouses (v. 506-511).

In the Persian stratum of The Thousand Nights and One Night (tr. Payne, London, 1882-84) are a number of descriptions of hospitality as exercised at Baghdad under the 'Ahbasid dynasty (e.g. 1. 74-83, ix. 3 f., 47-40). These throw a welcome sidelight on the descriptions in the Sāh-nāmah, and, though both works were composed in Muhamunadan surroundings, it is probable that they contain in their accounts a considerable amount of genuine Iranian material.

The humblest classes were equally hospitable, as is illustrated by the adventure of Baliram Gur with Lanbak, the poor water-earrier, and the rich Jew, Baraham (Šāh-nāmah, v. 450-459).

Jew, Baraham (Sāh-nāmah, v. 450-459).

It was the habit of Lanbak to devote half the day to his calling, and then to seek a guest; and it was his principle to have nothing left over for the next day. Having discouraged the people from purchasing from Lanhak, the king rides in disguise to his house, where he is warmly welcomed, and, after a game of chess, is entertained at table, the meal being followed hy wine. Bahrām passes the night as Lanhak's guest, and is besought to remain another day. Since Lanbak is still unable to sell water, he parts with some helongings and purchases food, which he himself prepares for his guest. The third day he urges Bahrām to remain, and pawns his water-bags for the meal which the two prepare; and it is with relactance that he permits his unknown guest to depart on the fourth day, after having urged him to remain two weeks longer. Bahrām next tries the hospitality of the rich Jew, only to be received with niggardliness and indignity; and he therefore bestows on Lanbak the wealth of Baraham (for other instances, see v. 257-360, 483-403 (where the hospitality of the wife is coatrasted with the Inhospitality of the husband), vil. 1401.).

On the other hand, the vice of inhospitableness

On the other hand, the vice of inhospitableness also existed, not only among the poor (v. 489 f.), but also among the miserly rich (v. 519-23).

In Dailan (corresponding roughly to the modern Gilan), it was enstomary for all the honsehold to withdraw excepting one, who, at a distance, waited upon the guest, who could thus assuage his hunger and thirst, the host scarcely venturing to appear even at the conclusion of the meal (Qābūs-nāmāh [11th cent.], xii., tr. Querry, Paris, 1886, p. 125 f.). To this al-Makdisi adds that it was not the usage in Dailam to sell bread, but that any stranger might enter a house and get what food he needed; while Ibn Fadlan records similar customs in Xvarizm, and in Arabic anthologies the Persian word for 'guest' is rendered as 'master of the whole house' (Inostrancev, Sasanidskiye Yetyudy, St.

Petersburg, 1909, p. 132 f., and the references there

given).

Modern Irān is so thoroughly Muhammadanized that it is difficult to distinguish between Iranian and Islāmie elements. Nevertheless, the following account of hospitality as shown by a relatively primitive Iranian people—the Kurds—may be eited from Soane's To Mesopotamia and Kurdistan in

from Soane's To Mesopotamia and Kurdistan in Disguise (Boston, 1913, p. 40 ff.):

'They told me that the best room in the place was at my disposal. . . . They possessed little enough of the world's goods, but their hest fowl was sacrificed to the occasion, eggs in numbers sufficient for ten men were produced. Every one of them except the headman, who sat by as host, busied himself ahout something. . . Surplus eggs they hard holied and put up for my journey next day.' Somewhat disconcerted by the evident intention of a young tradesman and his wife to pass the night in the same room, Soane was informed that this was necessary since the whole viliage possessed but two rooms fit to siecp in; and sines he passed for a Kurd 'and a guest, I must excuse their presumption in occupying the room, which was my exclusive property.' Early in the morning he was awakened by his host's wife, who 'herself carried out the small luggage to the carriage, and then two or three villagers turned out and loaded up the heavy things. Last of all, the headman appeared, and, as we drove away, the sound of his hearty, rough farewells rang in my ears.'

LITERATURE.—This has been cited in the course of the article. There seems to be no special treatise on the subject.

LOUIS H. GRAY.

HOSPITALITY (Japanese and Korean).—I. Japan.—I. Primitive and mythological period.—The Japanese are a very hospitable people. This spirit is already apparent in their mythology, which reflects the eustoms of primitive times. One of the earliest eosmogonie myths tells of the great hospitality offered by Uke-mochi-no-kami, the goddess of Food, to Tsuki-yomi-no-mikoto, the Moon-god (see art. Cosmogony and Cosmology [Japanese], vol. iv. p. 165°).

Moon-god (see art. COSMOGONY AND COSMOLOGY [Japanese], vol. iv. p. 165°).

It may be noticed in this story that the rice, fish, and game which the goddess 'prepared and set out on one hundred tables for his entertainment' had all come out of her own mouth. This may be a reminiscence of the early times when it was the custom among certain tribes which can claim some connexion with Japanese origins to chew the food of guests in order to soften it (cf. the Polynesian custom [A. Réville, Religions des peuples non-cirilisés, Paris, 1883, ii. 106])—a hypothesis strongly supported by the existence, even in the 8th cent., of a hody of thi-kami, or 'chewers of boiled rice,' mentioned in the Nihongi (i. 104, Aston's tr., London, 1806) among the various groups of women who looked after the little princes of the Imperial house.

The same spirit, of unlimited hospitality appears

The same spirit of unlimited hospitality appears in many passages of the most ancient sources. When Oho-yama-tsu-mi-no-kami, god of the Great Mountain, was visited by the divine prince Ninigi, the grandson of the gods, he offered him 'merchandise carried on tables holding an hundred' (Kojiki, tr. Chamberlain, new cd., Tokyo, 1906, p. 141); and, when the god of the Ocean, Oho-wata-tsu-mi-no-kami, saw Ho-wori-no-mikoto (His Augustness Fire-Subside) at his door, he immediately 'led him into the interior [of his submarine palace), and spread-

ness rire-subside) at his door, he immediately 'led him into the interior [of his submarine palace], and spreading eight layers of rugs of sea-asses' [michi, perhaps the sealion, or a species of seal] skins, and spreading on the top of there eight layers of silk rugs, and setting him on the top of them, arranged merchandise on tables holding an hundred, made an august hanquet,' etc. (ib. 148).

In these two texts, the reception is preliminary to a marriage, and it has been thought that the presents thus offered were a sort of down given

In these two texts, the reception is preliminary to a marriage, and it has been thought that the presents thus offered were a sort of dowry given by the father; but we see from a variant of the first account, which says that the god of the Great Mountain 'sent his two daughters with one hundred tables of food and drink to offer them respectfully' (Nihongi, i. 84), that it was, in the first instance, a question of presents of welcome and the classical meal of hospitality.

Another legend, which is peculiarly significant, shows us Susa-no-wo, the Storm-god, after he has been expelled from heaven because of his crimes against the Sun-goddess, wandering about the earth under a huge hat and a cloak of green grass in search of a shelter for the night (cf. Nihongi, i. 50). In his distress he asks a rich miser, Kyotan Shorai, for hospitality, which he refuses; but the

miser's elder brother, Somin Shorai, though a poor man, makes a bed of millet-straw for the traveller and gives him some cooked millet to eat. The god goes away. Some years afterwards he reappears. 'Are your children at home?' he asks Somin. 'There are here,' he answered, 'myself, my daughter, and my wife.' The god replied: 'Encirele yonr loins with a belt of rushes.' And that very night the god exterminated all mankind except Somin Shorai and his family. Then he said to Somin: 'I am the god Susa-no-wo. If any infectious disease should break out, let your descendants tell their name and girdle their loins, and they will be spared.' Hence, it is said, the New Year eustom of hanging a cord of straw (shime) over the doors of houses in order to prevent disease from crossing the threshold. This tradition, which is found in a very ancient work, the Bingo Fudoki, 'Topography of the province of Bingo' (see Florenz, Nihongi, Zeitalter der Götter, Tokyo, 1901, p. 302), and exists to this day in the locality (see Murray's Handbook for Japan, ed. 1884, p. 177), shows clearly to what an extent hospitality was considered a sacred duty.

2. Historical period. - Passing now from the primitive period and its legends to the historical period, we find the same hospitable customs in the dealings of the Japanese with strangers to their archipelago. No doubt, following a universal habit (Frazer,  $GB^2$  i. 150), they took certain steps to secure themselves from the demons, *i.e.* epidemies, which the strangers might bring with them; thus, two days before the arrival of foreign envoys in their capital, the Japanese performed a ceremony in honour of the Sahe-no kami, 'preventive deities' of a phallie description, to ward off evil influences (Engishiki [10th eent.], norito 13). Nevertheless, the Japanese attitude towards strangers was by no means hostile; it was with a kindly euriosity that they saw strangers come among them, and they offered them a home. All ancient Japanese history is full of stories of how the court gladly welcomed the Koreans, who brought interesting innovations with them—to enumerate the instances would be to relate the whole development of Chinese civilization in Japan, from the introduction of writing (Kojiki, 313) down to the introduction of Buddhism itself (Nihongi, Even the national gods exhibited a hospitality to foreign gods, and even before the introduction of Buddhism more than one Korean deity had been admitted to the Japanese pantheon (see Kojiki, 324; Nihongi, i. 169).

The same welcome was accorded the Europeans when they in their turn presented themselves to these distant islands. The Portuguese who landed in Japan, first at Jinguji-uri in 1541, then at Tancgashima in 1542, were received with kindness (see H. Nagnoka, Histoire des relations du Japon avec l'Europe aux xvic et xviic siècles, Paris, 1905, pp. 33, 36, etc.). St. Francis Xavicr, who landed at Kagoshima in 1549, was very courteously received by the prince of Satsuma, even although he was the bearer of a foreign religion. At their very first interview, the prince gave him permission to preach the Christian faith in his territory, and, a few days later, sent out letters-patcht in virtue of which all his subjects were at liberty to become Christians if they so desired. As a matter of fact, this local prince was not entirely disinterested: he was anxious to enter into relations with the Portuguese and to win over their vessels with a view to commerce, as was clearly shown by the fact that his attitude entirely changed when the saint wished to leave his territory. It cannot be denied, however, that the prince's first welcome was a really generous one—especially if we remember all the difficulties he might have had to

face with regard to the bonzes. The prince of Hirado afterwards received St. Francis Xavier 'with much affection and a good grace,' to use the saint's own words (Letter of 1551). Then at Yamaguchi, the prince made the saint come to him, questioned him graciously before his whole court, asked him where he came from and what he wanted, listened to his doctrine for a whole hour, and allowed him thereafter to preach the gospel with absolute freedom; a little later he presented the saint with a vacant monastery, and published it abroad throughout the town that he had authorized him to propagate his faith. Even in Kyōto, the capital, though St. Francis and his companions could not get an audience of the Emperor, the shogun, or even the chief of the Buddhist Church, yet they were never molested. Finally, the prince of Bungo, the last of the federal princes that Francis had occasion to visit before leaving Japan, wrote letters to the saint saying such things as:

'I beseech you to come immediately, hefore the sun rises, and hooks at the door of my palace where I shall await you with impatience. . . . Give mc news of your health so that I may sleep well throughout the night, until the cocks awake me announcing your arrival (D. Bouhours, Vie de S. François-Xavier, Paris, 1632, il. 64).

In short, during the two and a half years which the first apostle of Christianity passed in Japan, he was treated with a tolerance and good-will which would have astounded Europe; and this explains the delusion which sprang up in his mind 'that a nation so polite and judicious would easily be won to Christianity' (Bouhours, ii. 58). The persecutions which Christian missionaries

had to suffer later do not prove anything against the hospitable spirit of the Japanese. In 1565 the Jesuit Fathers Froez and Vilela were received with honour by the shōgun Yoshiteru himself. In 1568, when Father Organtin arrived at Nagasaki, the powerful Nobunaga put a Buddhist temple at his disposal to stay in, and offered him banquets for three days. Why did this same Nobunaga afterwards regret giving this protection to the new religion? And why did Hideyoshi, his successor as dictator of Japan, after first taking the Christians under his protection at Osaka, finish by harshly proscribing Christianity? Recause the missionaries made the mistake of involving themselves in the local politics of the feudal princes, causing trouble among the people as a consequence, and finally disturbing the central government. But, in the same edict of 1587 which ordered all the missionaries to leave Japan within twenty days, Hideyoshi decreed that the 'black ships' (i.e. the Portuguese) which came for purely commercial purposes might continue their traffic, and, in another edict of the following year, he recommended his subjects to continue to receive them well (see Suganuma, Dai Nihon Shôgyô-shi, History of the Commerce of Japan, pp. 324-326). Finally, Hideyoshi's successor, the great shōgum Iyeyasu, who had also begun by showing himself favourable to the Christians, was forced, by new intrigues of the Portuguese Jesuits and Spanish Franciscans and Dominicans, to withdraw his good-will and to decree, in a proclamation of 1614, that 'these must be instantly swept out, so that not an inch of soil remains to them in Japan on which to plant their feet' (see J. H. Gubbins, 'Review of the Introduction of Christianity into China and Japan,' in TASJ vi. pt. i. [1888] p. 48). These measures culminated finally when Iyemitsu, the third Tokugawa shōgun, by his notorious edicts of 1633 and 1636, laid Christianity under the ban.

Thus, if the religious polities of the Japanese seem to have been an exception to their proverbial hospitality, it was only so from the time when the Roman Catholic missionaries, forgetting discretion

in their zeal, abused this hospitality. The Japanese were willing to be converted; they would not be conquered. The necessity of defending themselves against this religious invasion had the additional effect of calling forth, in the above-mentioned edicts of Iyemitsu, a limitation of the commercial relations which seemed indispensable for the general tranquillity of the country and the solidity of its political system. But this limitation, inspired by legitimate considerations of public safety, did not prevent the Japanese from offering hospitable treatment to the foreigners who came for the single purpose of peaceable commerce; this explains why Holland had almost the monopoly of foreign commerce at Nagasaki till the Revolution of 1868.

3. Modern period.—In the modern period the same spirit may be observed. The Japanese Government employed every means of protection against dangers from America and Europe; it confined the residence and commerce of foreigners to certain open ports and required passports for journeying to the interior, in order both to keep a watch over their movements and to obtain from the foreign powers, in exchange for a more complete freedom for their subjects, the abnegation of the unjust treaties that had been imposed upon them since 1854. When this diplomatic end was attained, i.e. at the end of the year 1899, Japan was opened up anew to foreigners under ordinary conditions. As for the ancient prohibitions against Christianity, they had long fallen into desuctude, the Japanese continuing, as of old, to welcome all religious novelties, provided they do not cloak political schemes. The history of Japan, then, exhibits a remarkable spirit of hospitality among its inhabitants, in spite of the opposite impression made by a superficial observation of the auti-Christian persecutions; a knowledge of the causes of these persecutions reduces their significance to vanishing point, and shows the Japanese character

in its true light.

To day a foreigner travelling in the interior of the country may still find the ancient hospitality, which was never eclipsed except by the fault of those who were the first to profit by it. The present writer can bring his personal experience to witness. One night in 1896, when travelling in Yamato, he found himself lost in the open country. After walking for a long time in the dark and in drenching rain in search of a village where he might find a means of transport, he arrived at a peasant's hut and knocked at the door. Imagine a Japanese travelling in the country in Europe and arriving at midnight at a peasant's house: there would be furious barking from the watch-dog, hostile suspicion of the nuknown wanderer on the part of the master of the house, and, to put things at their best, a poor shelter offered at last, with no good grace, in some outhouse. The Japanese cottage, on the other hand, was opened immediately; the on the other hand, was opened infinediately; the father and his family all got up to receive the stranger on their knees; they were very pressing in their offers of a bath and a friendly meal. After this came the classic questions in Homerie style: 'Honourable stranger, whence comest thou? Whithor goest thou? What is thy country?' and so on. Finally, when the guest was ready to depart, the father sent two of his sons several miles distant to bring a jinrikisha and runners to carry him to Kyōto. It is hardly necessary to add that these poor peasants would not take any remuneration, and the only way in which their guest was able to repay them at all was by discreetly making

presents to the youngest members of the family.

H. KOREA.—Korea, on the other hand, is quite different. This country, so inaccessible to the foreigner, has been well named 'the hermit nation.' The accounts of missionaries, from the Relation de

l'établissement du christianisme dans le royaume de Corée, ed. by de Gouven, bishop of Peking, in 1797 (in Nouvelles lettres édifiantes, v. [1820]), to the Annales de la propagation de la foi (from vol. vi. [1833] to the present day), speak of nothing but persecutions which, like those of 1839 and 1866, were accompanied by terrible massacres; and show us also how different their reception was from their first welcome in Japan, the missionaries having had all sorts of difficulties in getting into Korea and being forced to live a secluded life in order to escape being put to death. It is only in virtue of comparatively recent treaties that the diplomatic relations drawn up with the Koreans have led to the opening up of their country (1887). A Japanese traveller, who risked his life in Korea in 1875, gives a picturesque account of his journey. Though dressed in Korean mourning-costume, the broad hat of which covered his face, he had to take the greatest precautions in order to escape recognition as a stranger when going about the interior. In order to escape notice he had bravely to eat the most repugnant rancid food in inns, to sleep on a sort of stable litter in peasants' huts of the most filthy description, while the idea of having a bath was simply out of the question (see W. J. Kenny, 'Account of a Secret Trip in the Interior of Korea,' in TASJ xi. [1883] pt. ii.). It is only necessary to compare this account, of the end of the 19th cent., with those of the missionaries who visited Japan in the 16th, in order to measure the gulf which, from the point of view of hospitality, separates these two civilizations.

LITERATURE.—This is given throughout the article. MICHEL REVON.

HOSPITALITY (Semitic). - Hospitality among the Semites and Eastern peoples in general rests upon religious sanctions (see ERE v. 725). 'To be inhospitable was not only to be despicable, it was also to be irreligious. Hospitality was a sacred duty' (Day, Social Life of the Hebrews, p. 170).

I. IN BABYLONIA AND EGYPT.—1. Religious species — Heavitality was practiced by the real-

aspects.—Hospitality was practised by the gods themselves. According to the myth of Adapa, food and water of life, garments, and oil were brought to the hero when he arrived before Anu. Acting on the advice of his father Ea, who feared that the food and water might tend to death instead of life, Adapa refused these, but accepted the garments and oil (R. W. Rogers, Cunciform Parallels to the OT, New York, 1912, pp. 68, 74, 76). It was inculcated by that part of the ritual which was concerned with the offering of gifts to the gods, and by the cult of the dead, which at the outset required that hospitality should be rendered to the corpse in the form of decent burial, and was continued in the supply of food and drink to the deceased. According to the Book of the Dead, the heart which is righteous and sinless addresses the gods of the under world thus:

the gods of the under world thus:

'I have given bread to the hungry man, and water to the thirsty man, and apparel to the naked man, and a boat to the fshipwreeked) mariner. I have made holy offerings to the gods, and sepulchral meals to the khus' (E. A. W. Budge, Book of the Dead, London, 1901, it. 372 f.).

A Bab. didactic poem enjoins:

'Give food to eat, give wine to drink. . . . With him who thus sets his god is pleased, he is pleasing to Shamash, he will requite him with good' (Rogers, p. 175 f.).

2. Social aspects.—Hospitality was practised by the community, among those who dwelt together

the community, among those who dwelt together within the walls of the same city. The Egyptians were a pleasure-loving people, and scenes of feasting and banqueting figure in their pictorial remains. The Babylonians and Assyrians, while more staid, also held festive assemblies. As early as the days of Hammurabi (c. 2000 B.C.) we read of laws for regulating wine-shops (Code, §§ 108-111), with evidence that conviviality might be carried to excess (§ 109). The penalty of exile from the city

(§ 154) implies that the fugitive was placed outwith the laws of hospitality as well as the laws of the State (cf. Gn 414). The curses attached to the kudurru, or boundary-stone inscriptious, reveal the same disability in one who has been guilty of violating such landmarks, even while he continues to live within the city:

'Like a dog (may he) pass the night in the streets of his city'; 'seeing angry faces and holding out his hand, without being fed, may he wander through the streets of his city' (W. J. Hinke, A New Boundary Stone of Nebuchadrezzar I., Philadelphia, 1907, p. 60).

3. International aspects.—We are indebted to the Tell el-Amarna Letters for a life-like picture of international relations in the middle of the second millennium B.C., with numerous indications of

hospitality, or rather its opposite.

(a) Kings did not themselves travel into the countries with which they held intercourse, but sent their ambassadors, and gave hostages, the hospitable reception and treatment of whom was essential to the maintenance of friendly relations. There is clear evidence that considerable strain was put npon the patience of one of the parties by detention of messengers, lack of information regarding those given in marriage, and especially shortcoming in the matter of presents. Burra-buriash, king of Babylon, apologizes to the king of Egypt for not having received his envoy at his own table, and given him food to eat and wine to drink, on the ground that his health was not good at the time. He further reproaches his brother, the king of Egypt, because he had not comforted him in sickness, nor sent an envoy to inquire after his condition (*Tell cl-Amarna Letters*, Berlin, 7; cf. 2 K 2012). A striking accompaniment of national intercourse is the transit of images of the gods, that of the goddess Ishtar travelling into Egypt (ib., London, 10), while some time later (13th cent.) that of the Egyptian god Khonsu travelled to the land of the Hittites to effect the cure of the king's daughter. It goes without saying that the images were to be honoured, and that those who attended them were to be hospitably treated. The image of the great Amen himself journeyed with Unamon to Phænicia (c. 1100 B.C.), but in the decay of Egypt's power failed to win respect as aforetime and a favourable reception for the envoy. Probably the first State visit on the part of a king is that chronicled of Khattusil II., king of the Hittites, who journeyed to Egypt (c. 1266 B.C.) to attend the marriage of his daughter to Rameses II. (H. R. Hall. The Ancient History to Rameses II. (H. R. Hall, The Ancient History of the Near East, London, 1913, p. 371 f.).

(b) The petty rulers of Palestine and Syria represent their discharge of the obligations placed upon them by the king of Egypt as hospitality. Akizzi of Katna gave to the king's soldiers food, drink, oxen, sheep, honey, and oil (Tell cl-Amarna Letters, London, 36). Aziru, the rebel son of Abd-Ashirta, professes to have treated Hani, the envoy of Egypt, with due respect, lending him horses and asses for his journey, while his brethren supplied him with cattle, sheep, fowls, food, and drink (ib., London, 35). The faithful Rib-Addi of Byblos reports that

upon returning from Berytus to his own house he found it barred against him (ib., London, 16).

(c) To traders a measure of hospitality was extended. After the conquests of Thothmes III. there were good roads made throughout Syria, furnished with post-houses where food and lodging could be prepared? (A. H. Savee, Patriarchal ing could be procured' (A. H. Sayee, Patriarchal Palestine's, London, 1912, p. 180). Traders availed themselves of these routes, and travelled securely. Later, when the land became disturbed, caravans were plundered and members, rubbed and slain

27). A postscript to one of the cuneiform letters found at Tannach (dated 14th cent. B.C.) reads mas-ru mas-ru, 'Highway, Highway' (i.e. for the messenger) (Rogers, 283; cf. L. B. Paton, Syria and Palestine, London, 1902, p. 56f.).

4. Hospitality towards tribes and peoples.—In the prologue to Hammurabi's Code of Laws the king claims to have sheltered the people of Malgi in misfortune (col. iv. 11-13). Such royal hospitality is soldom disinterested. Thus, Sennacherib exalts Padi, king of Ekron, over the townsfolk who had committed wickedness, but at the same time exacts tribute from him (Taylor Cylinder, iii. 4-11). The Cylinder of Cyrus represents this king

as a benefactor to Babylon and its people (1. 25 f.).
5. Hospitality to nomads.—The desert tribes, who in later times afford the most evident instances of the virtue of hospitality, at this epoch appear rather as marauders, a scourge to settled communities and to traders (especially in the Tell el-Amarna Letters). Yet the Egyptian government was at times tolerant to them, as appears in the permission given to the Mentiu, or nomads, to settle in a prescribed district (reign of Horembeb, XVIIIth dyn.), and to the Shasu, or Bedawin, to pass within the eastern horders of the land of the Pharaoh, Meneptah II., 'to feed themselves and to feed their herds' (Sayce, The Higher Criticism and the Monuments, London, 1894, p. 240 f.).

6. Hospitality to exiles and emigrants.—The extent to which hospitality was shown to furtives.

extent to which hospitality was shown to fugitives and emigrants may be indged from the letter addressed by Amenhotep IV. to Aziru (Tell cl-Amarna Letters, London, 72), in which whole fami-

lies are mentioned, and also from the terms of the Hittite-Egyptian Treaty (Hall, 350, 365 f.).
7. Hospitality to individuals.—Three outstanding instances of hospitality (with elements of inhospitality) accorded to travellers, real or fancied,

are furnished by Egyptian tales.

(1) The most instructive instance is that of the noble Sanehat or Sinuhe (XIIth dyn.; c. 2000 B.C.). A fugitive from Egypt, he was preserved from death hy the hospitality of a Bedawi, who gave to him water and boiled milk. For a time he so-journed with the nomads. Thereafter he was received by a prince of the Upper Tenu (perhaps Syria), Ammuanshi by name, who made him tutor to his children, and gave him his eldest daughter in marriage. He appointed him to rule over part of his territory, and made him commander of the army. He had daily rations of bread, wine, boiled most conductors are used as the mixilage of meat, and roast goose, as well as the privilege of lunting game. This kindness reacted on his own

'The messenger who came from the court or went thither etayed with me, I gave hospitality to every one, and I gave water to the thirsty'; 'I set on his journey the traveller who had been hindered from passing by '(A. Erman, Life in Ancient Egypt, tr. Trard, London, 1804, p. 270 ff.; Sayee, Patriarchal Palestine<sup>2</sup>, 178).

Palestine<sup>2</sup>, 178).

Towards the end of his life he was permitted to return to Egypt, and was graciously received at

court.

'The coarse garments of the Beduln were exchanged for fine linen; bls body was bathed with water and scented essences; he lay once more on a couch and enjoyed the luxurious cookery of the Egyptians. A house and pyramid were built for him; a garden was laid out for him with a lake and a kiesk, and a golden statue with a robe of electrum was set up in it' (Sayes, 179; cf. Hall, 1571.).

(2) The Travels of a Mohar is a narrative relating to Syria and Palestine in the reign of Rameses.

II. (XIXth dyn.; 13th cent. B.C.). Our interest is in the evidence of inhospitality (the hospitality being doubtful) disclosed by this supposed satire. At every stage Nature shows herself inhospitable; and terror, from wild heasts and from man, always seems to oppress the traveller. His clothing is stolen by thieves in the night, and his groom deserts him and joins the robbers. Some time

later, when he comes to Joppa, the maiden who keeps the garden proves his undoing. Here his bow and sword are stolen, his quiver and armour

'Prayer does not avail thee; even when thy mouth says, 
'Give food in addition to water, that I may reach my goal in 
safety," they are deal and will not hear. They say not yes to 
thy words' (for a translation of the whole, see Sayce, 180 ff.; 
cf. Erman, 380 ff.).

(3) The adventures of Unamon belong to the close of the 12th cent. B.C., and relate to Palestine and Phænicia. At Dor, near Mt. Carmel, Unamon landed to purchase timber, and was received by Prince Badiel, who sent him bread, wine, and beef. During the night he was robbed by a sailor, who deserted, of the money needed to effect the pur-chase of the timber. When he arrived at his destination, Gebal (or Byblos), he could accomplish nothing, and was ordered to depart by Zakarbaal, prince of Byblos. After serious delay, however, diplomacy gained the day, and the timber was cut and loaded. Then hostile ships lying outside the harbour hindered Unamon from sailing. The hero sat down upon the beach, and bewailed his fate even with tears. By way of consolation, the prince sent him two measures of wine, a ram, and an Egyptian singing-girl, saying, 'Sing to him that he may not grieve.' His troubles were not yet ended, for in Alashiya the natives would have killed him, but the queen Hatibi intervened. conclusion is not known (Paton, 168 ff.; A. E. P. Weigall, Treasury of Ancient Egypt, London, 1911, . 112 ff.). This tale is instructive, as showing that hospitality to strangers was largely dependent on the respect entertained for the authority of the land from which they hailed.

On a review of the whole literature, we receive the impression that hospitality had not, as a rule. risen to the level of the virtuous; it was enforced

rather than voluntary.

8. Behaviour of guest.—Noteworthy among the precepts of Ptahhetep (Vth dyn.) is the rule for guests:

'If thou art among a company of men and women in the abode of a man who is greater than thyself, take whatsoever he giveth thee, making obelsance gratefully. Speak not oftener than he requireth, for one knoweth not what may displease him; speak when he speaketh to thee, and thy words shall be pleasing unto him' (Budge, History of Epypt, London, 1902, it. 149; cf. Pr 23<sup>12</sup>, Sir 31<sup>122</sup>, 1 Co 10<sup>27</sup>).

II. BIBLICAL (OT) .- So far as the externals of hospitality are concerned, the Biblical data fit in well with the record from other sources. It will be convenient to observe the distinction between nokhrî and gêr, the former the stranger who is merely passing by, the latter the stranger who acquires a settlement, with certain civil and re-ligious rights, in the land of adoption. It is with the nokhri rather than the ger that we are here concerned. While all the categories named above might be repeated for the OT, the clearest examples of hospitality are afforded by private and individual instances. The hospitality of the tent and of the city are found in proximity to each other (Gn 18<sup>1-3</sup> 19<sup>1-3</sup>). With the help of allied passages (Jg 19, 1 S 28<sup>24</sup>, 2 S 12<sup>4</sup>, 1 K 17<sup>56</sup> etc.) the various stages may be clearly realized. They include: reception (meeting and obeisance), offering of water for washing feet, invitation to rest and to tarry all night, provision of food and drink, and in certain circumstances a feast (an animal, c.g. a calf or a kid, being killed and dressed; bread, butter, milk, and wine also being set before the guests), feeding and housing of animals (asses and camels). Guests were kept inviolate, even at the sacrifice of the honour of danghters (Gn 19<sup>5</sup>, Jg 19<sup>22-24</sup>). No remuneration was taken, although, when a visit was of set purpose, presents were brought (Gn 24<sup>23</sup> 43<sup>11</sup>, Job 42<sup>11</sup>). Abraham even went with his guests to bring them on the way (Gn 1816).

VOL. VI.-52

While hospitality was accorded as a rule, there were departures from it (Jg 1918). Evidently the open space about the city gate was the only 'inn' available in the event of no private house being offered. It was against the laws of hospitality to leave the stranger in such case (Joh 3122), although there was probably little hardship entailed in having to pass the night in the open. Travellers took their own provisions and provender (Jg 1919), which were husbanded in the event of a host being found (v.21). On the road to Egypt were halting-stages (inn or lodging place, Gn 4227 4321, Ex 424), where shelter, and perhaps water, hut no food, were to be found (cf. Jer 93). The instances in Nu 2019 and Dt 227L show that even water was paid for. This, however, is an extreme case.

Even among those who are blood-relations the ordinary procedure in respect of hospitality is observed, as, e.g., when Abraham's servant journeyed to the home of Rebekah (Gn 24<sup>11st</sup>). The meeting is like that of strangers, the narrative working up to the disclosure of relationship, which, of course, produces a great change (vv. 31-23); cf. Gn Even in such circumstances hospitality is not accepted till the errand has been told (Gn

2489).

A unique instance is the stated hospitality

A unique instance is the stated hospitality

The prophet Elisha by the great woman extended to the prophet Elisha by the great woman of Shunem (2 K 48st.). As often as he passed by he turned in to eat bread, and in the end had a furnished chamber reserved for his use. This instance is further instructive for the lead taken by the hostess, which recalls the more public part played by women in early times as contrasted with later (Gn 18° 24<sup>18</sup> 29<sup>12</sup>, Ex 2<sup>20</sup>, Job 1<sup>4</sup>). The act of Jael (Jg 4<sup>170</sup>.) is to be put by itself as a gross breach of hospitality, notwithstanding the fact that it is justified upon national grounds by the writer of the Song of Deborah and Barak (Jg 5<sup>24x</sup>.). In the eyes of the later Semites such a deed would have been reprobated, and such advantage would not have reprobated, and such advantage would not have been taken even of an enemy, once the food-hond had been established (W. Robertson Smith, Kinship and Marriage? London, 1903, p. 176 f., Rel. Sem.?, do. 1894, p. 269 ff.). This instance may be set over against Rahab's kindness to the spies (Jos 2), who, in virtue of their hostile mission, could lay no claim to hospitality (cf. Gn 42°.).

We are reminded of the tale of Sanshat in the experience of Moses (Ex 2°.), who, coming as a stranger, tarried with the priest of Midian as one of the family. Like Lot in Sodom, he represents the oer at an undeveloped stage.

the ger at an undeveloped stage.

In the OT the instances of kindness to individual strangers completely overshadow the national and kingly aspects of hospitality. But examples of each are found. The sons of Jacob participated in the hospitality of the Egyptians, although national prejudice required that they should eat bread by themselves (Gn 43°2) and dwell by themselves (46°4). themselves (Gn 43<sup>32</sup>) and dwell by themselves (46<sup>32</sup>). In the wilderness the Israelites were denied the minimum of hospitality by the kings of Edom (Nu 20<sup>17n.</sup>) and of the Amorites (21<sup>22l.</sup>). David, as an outlaw, was the recipient of kindness from Abigail (1 S 25), the king of Moab (22<sup>3l.</sup>), and Achish, king of Gath (27<sup>3l.</sup>); and, as a fugitive before Absalom, from certain prominent men dwelling on the east side of Jordan (2 S 17<sup>27l.</sup>). On the other hand, his envoye sent with hospitable On the other hand, his envoys, sent with hospitable intent to the court of Hannn of Ammon, were shamefully treated (10<sup>4</sup>), which led to a dire revenge (12<sup>31</sup>). The visit of the queen of Sheba to Solomon (1 K 10<sup>1-15</sup>) is an example of sovereigns standing towards each other as guest and host. A king's kindness to a refugee prince is seen in the Pharnoh's reception of Hadad (III.) of Edom (I K 11<sup>17-22</sup>)—a very close parallel to the story of Sanehat. Hezekiah's hospitable treatment of the envoys of Merodach-Baladan is shorn of its glory by the prophetic censure following (2 K 2012-19).

Hospitality is but rarely marred by deceit in host (2 S 12<sup>4</sup>, 1 K 13<sup>116</sup>, Pr 23<sup>16</sup>.) or guest (Jos 9<sup>22</sup>), or requited by ingratitude (Ps 41<sup>9</sup>; contrast 2 S 9, 19<sup>246</sup>.). By rule, its tendency was elevating (Pr 91-6), but there was the possibility of debasement (Pr 9130.), especially when luxury was in fashion (Am 64-6), and feasting was carried to excess (Pr 23<sup>20, 297.</sup>, Dn 5, Est 1).

Some code of hospitality necessarily underlies

the political alliances during the monarchy, while trade and commerce imply toleration of, and fair dealing towards, foreigners, and perhaps some

measure of kindness.

Literature.—HDB ii. 427 fl., v. 375b; EBi, col. 212b i.; i. Benzinger, Heb. Archäol., Tübingen, 1907, pp. 131-133; W. Nowack, Heb. Archäol., Freiburg and Leipzig, 1894, p. 186 f.; A. Bertholet, Die Stellung der Israeliten und der Juden zu den Fremden, do. 1896; E. Day, Social Life of the Hebrews, London, 1901; R. A. S. Macalister, Sidelights from the Mound of Gezer, do. 1906, pp. 83-106. Most recent works of travel in the Near East contain references to hospitality, illustrated by modern usage; typical of such is H. Clay Trumbull, Studies in Oriental Social Life, Philadelphia, 1894, pp. 73-142.

WILLIAM CRUICKSHANK.

HOSPITALITY (Teutonic and Balto-Slavic).—
The ancient records furnish the clearest indications of a widely diffused practice of hospitality both among the Teutons and among the Slavs. As regards the Germans, Cæsar (de Bell. Gall. vi. 23) writes:
'Hospitem violare fas non putant; qui quaque de causa ad eos venerint ab Iniuria prohibent, sanctos habent, hisque omnium domus patent victusque communicatur'; while Tacitus (Germ. 21) says:
'Convictibus et hospitiis non alia gens effusius indulget. Quemcunque mortalium arcere tecto nefas habetur; pro fortuna quisque apparatis epulis excipit. Cum defecere, qui modo hospes fuerat, monstrator hospitii et comes proximam domum non invitati adeunt. Noo interest: pari humanitate accipiuntur. HOSPITALITY (Teutonic and Balto-Slavic).

accipiuntur.

Of the Slavs, Mauricins (Strateg. xi. 5) speaks as

follows:

είσι δε τοις επιξενουμένοις αὐτοις ήπιοι, καὶ φιλοφρονούμενοι αὐτοὺς διασώζουσιν εκ τόπου είς τόπου, οῦ αν δέωνται, ώς είγε δι αμέλειαν τοῦ ὑποδεχομένου συμβή τον ξένον βλαβήναι, πόλεμον κινεί και αὐτοὺ ὁ τοῦτον παραθέμενος, σέβας ήγουμενος την τοῦ ξένου ἐκδίκησιν.

The Letts had even a special god of hospitality, called Ceroklis ('ille hospitalitatis deus cui ex omnibus esculentis primas buccas, primos ex poculentis haustus stulta libabat plebes'; cf. H. Usener,

Götternamen, Bonn, 1896, p. 106).

Tentons and Slavs have another point of contact in the fact that they have a common term for 'guest,' the Goth. gasts, ξένος (gastigôds, φιλόξενος; guest, the Golh. gasts, fews (gastigods, phoferos; gasti-gódei, phoferla), corresponding exactly to the O. Slav. gosti, 'guest,' and both being etymologically equivalent to the Latin hostis, 'stranger,' enemy.' The Lithu-Letts use a different term: Lith. wieszéti, 'to be one's guest,' wieszne, 'guest' (fem.), Lett. wisis, 'guest,' which are all connected with the Lith. wiesz- (cf. Gr. okos, Lat. vicus). Should the question be asked how, as in the case of the Goth gasts. O. Slav. gasti. a word meaning of the Goth. gasts, O. Slav. gosti, a word meaning originally 'stranger' or 'enemy' (cf. Lat. hostis') should gradually acquire the sense of 'guest,' the answer will be found in the practice of exchanging gifts, met with everywhere (see ARYAN RELIGION, vol. ii. p. 51\*; and GIFTS, vol. vi. p. 197), and, in particular, on Teutonic and Slavic soil, in the closest connexion with the practice of hospitality, and which, as the mutual gifts had to be in some degree commensurate with each other, has been aptly called 'trading by gift,' or 'interchange of presents.' Tacitus, in the chapter already cited, expressly says: 'Abeunti si quid poposcerit, concodere repris at poscendi invient eader facilitas': cedere moris, et poscendi invicem eadem facilitas'; and the Havamal puts it still more clearly:
'No one is so hospitable or ready to give
That he despises presents;
Nor so little mindful of gain
That he hates return gifts.'

Here, too, we have the reason why in Old Russian gost is quite commonly used for 'merchant' (kupéci), while gostiti means 'to trade,' and gos. (kupścil), while sha. 'business.'

While the stranger thns literally found an open door because of the wares he carried, we are able to derive from the facts of language a still more precise idea of the way in which the relation between the visitor and his host attained its further development. In the Slavic languages the word gospodi (from \*gosti-poti-s)—corresponding exactly to the Lat. hospes (from \*hosti-pets)—is now for the most part used for 'God,' but originally meant, quite generally, 'master' or 'lord.' The second element of this primitive compound is the Aryan \*notics (Skr. notic. Gr. mater. Goth stone) there's of \*poti-s (Skr. pati-, Gr. πόσις, Goth. faps), 'head of the house.' The Slav. gospodi, Lat. hospes, accordingly mean 'master of the stranger'; and this implies that the guest, during his stay in the house of his entertainer, enjoyed equal privileges with the members of the family. In order to enable us to realize what such friendly treatment meant for a traveller in those days of general insecurity, we quote here a statement regarding Albanian hospitality, taken from a work entitled Eine Reise durch die Hochländergaue Oberalbaniens (Zur Kunde der Balkanhalbinsel, ed. C. Patsch, pt. i., Vienna and Leipzig, 1904), by K. Steinmetz:

Leipzig, 1904), by K. Steinmetz:

'Their hospitality, which is unrivalled, may be extolled as the finest characteristic of the North Albanian people,—the Sonth Albanians do not have it in the same degree,—and is of itself sufficient to mitigate considerably the harsh opinions regarding the Albanians often expressed by other travellers. It is not confined to their universal practice of entertaining the stranger, and of regarding a payment as an insult; it goes much further than that. If I eat a morsel of bread in a house, drink a cup of coffee or even but a glass of wine, I at once become a friend (mik, i.e. Lat. amicus) of the house, and if on my further journey I am rohhed or killed hefore I arrive at another house, the family as a whole will not rest till they have avenged the deed, i.e. shot the perpetrator. . . . It, as happens but seldom, a house does not assume responsibility for a person killed within its precinct, it becomes liable to the hlood-revenge of the murdered man's family. This explains why I, though almost always accompanied by only one man, was able to pass through the rudest tribes without danger; for any possible assailant who might think of robbing or killing me knew that he would thereby be exposing himself to the most determined vengeance on the part of the household with which I had last sojourned.'

It thus appears that the family of the host, and

It thus appears that the family of the host, and especially, of course, the host himself, accept responsibility for the safety of the guest, and, further, that this responsibility is not limited to the time during which the stranger sojonrns with the family, but lasts while he is on his way to other quarters. This is exactly what finds expression in the above quoted references to the hospitality of the Slavs and Germans, as, e.g., when Manricius, speaking of the former, says that the host is united to the guest by the laws of blood-revenge; when Cæsar states regarding the Germans that they consider themselves to be under obligation to protect the stranger, and look upon it as a crime to injure a guest; and when Tacitus, referring to the same people, asserts that, if provisions give ont in the house of the host, the latter must act as the 'guide and companion' of his guest on the way to the hospitality of other honses.

In the Teutonic dialects, however, we do not actually find the form \*gasti-faps (Slav. gospodi, Lat. hospes) which we might have expected. In the oldest extant forms of the primitive Tentonic speech, its place had already been taken by the Goth. watrdus, O.H.G. wirt, O. Sax. werd, O. Fris. húswerda. The earliest occurrence of this stem is in Ulfilas, Ro 16<sup>23</sup>, gôleip izwis Gaïus, wairdus meins jah allaizôs aiklêsjôns (ἀσπάζεται ὑμᾶς Γάϊος | ὁ ξένος μου και δλης τῆς ἐκκλησίας). The Goth. wairdus, accordingly, has precisely the same meaning as the Lat. hospes (from \*hosti-pets, 'lord of the stranger') in its original sense, i.e. as applied to the host, not the guest. The words ξένος μου και δλης τῆς ἐκκλησίας

may be taken to imply, as expositors (e.g. Jülicher, B. Weiss) think, that the Christian assembly met in the house of Gaius, or else that the latter had afforded willing hospitality to numerous visitors from the Corinthian community. This original sense of watrdus will then quite readily explain other meanings still traceable elsewhere, as, e.g., 'lord of the house' (paterfamilias), 'hnsband,' etc.

On the purely linguistic side, the present writer would trace this Teutonic form to a primitive Teutonic abstract noun, viz. \*wer-tu, which, as being cognate with O.H.G. weren, O. Fris. wera, M.L.G. weren, 'to give security,' originally meant 'secnity,' 'guarantee.' From the abstract \*wer-tu, again, by the common philological process of peragain, by the common philological process of personification, was developed the sense in which it was applied to the person making himself responsible for another, i.e. the 'surety' or 'guarantor' himself, precisely as, e.g., the Goth. hliftus (Lat. clepere, 'to steal') meant originally 'theft,' and then came to mean 'thief.' That the legal idea of 'security' existed among the Teutons at a very period is shown by the fact that the Romance early period is shown by the fact that the Romance forms—Ital. guarento and Fr. garant, 'guarantor,' 'surety' (Ital. guarentire, Fr. garantir, 'to guarantee')—are derived from the O.H.G. participle werento ('one acting as security,' Med. Lat. warens, warantus, etc.). Thus the Goth. watrdus, in complete conformity with the historical references quoted above, denotes the man who became seenrity for the safety of his guest.

Meution should be made, finally, of a Lithuaniau term for 'guest' which has not been referred to in the foregoing, viz. svėczias, i.e. \*svetjas, which is cognate with the Greek \$\tau\_{rys}\$, \$\tau\_{rys}\$, 'kinsman,' 'clansman.' This term expresses the idea that, as soon as the incomer, who is elsewhere designated as gasts, gosti (= Latin hostis), was granted the privilege of hospitality, he was looked upon as an inmate of the honse (cf. the Lithu-Lettish stem wiesz-, noted above). The head of the house, as we have seen, had to become security for the members of his handladd as also for his manufacture. bers of his household, as also for his guests, whenever it was necessary to protect them or to take vengeance on their account. But he was held responsible also when a member of his household or a guest committed an act of injustice. This finds emphatic expression in the Anglo-Saxon code:

'If any one shelters a guest (a merchant, or other person who has come across the boundary) for three nights in his own dwelling, and also feeds him with his own food, and he [the guest] does an injury to another person, let that head of the house hring the other to account at law, or in his stead discharge what is legally due '(cf. F. Liehermann, Die Gesetzs der Angelsachsen, l. 1, Halle, 1898, p. 11).

From all this it is clear that the practice of hospitality—as a designation of which the Rnss. chlebu-soli, 'bread-salt,' derived from the ceremonial presentation of these articles of food at the reception of a guest, ought to be referred toof immense significance for the development of intercourse, and, in particular, of commerce. It was likewise the starting-point of the entire hostelry system of Northern Enrope, special quarters for travellers being provided in the larger houses much visited by strangers, and more especially in the monasteries; and, while this was done at first for hospitality's sake, it came in time to be done for payment. All the Tentonic languages have a term for 'guest-house': O.N. gesta-hús, O.H.G. gast-hûs, A.S. gesthús; and there is also the O.N. inni, A.S. inn, a word of obscure origin. In the Slavic tongues we find O. Slav. gospoda, Czech hospoda, etc., 'lodging,' which are derived from 'gosti-pota' (cf. gospodi above), and meant origin-

ally 'protection of and lordship over guests.'
On the traces of the practice of lending a wife to a guest, see art. Chastity (Tentonic and Balto-Slavic), vol. iii. p. 499.

LITERATURE. — This is given in the article. Of. also O. Schrader, Linguistisch-historische Forschungen zur Handelsgesch. und Warenkunde, i., Jena, 1886, ch. i., and Reallexikon der indogerman. Altertumskunde, Strassburg, 1901, s.v. 'Gastfreundschaft.'

O. SCHRADER.

HOTTENTOTS.—I. Origin and migrations.—At the time of the discovery of the Cape of Good Hope and its colonization by Europeans, the S.W. corner of the African continent was found to be in the occupation of two distinct peoples, known to us as the Bushmen and the Hottentots. Of these the Hottentots were the dominant race. They were almost everywhere engaged in desultory hostilities with the Bushmen, who were doubtless the aborigines of the country, and who were usually treated by the Hottentots as the savage inhabitants of a colony are too often treated by or at least reduced to servitude. For the Hottentots were an intrusive people. Their origin has been the subject of considerable discussion. Their the white colonists: they were to be exterminated, traditions point back to a time when they dwelt in 'a well-watered region somewhere in the centre of the continent, from which they were driven by a more powerful people, of a black colour, who came down from the north or north-east' (Theal, 59). An examination of their language by philologists has lad to the discourant that has led to the discovery that it was a highly organized tongue, akin to the ancient Egyptian and other languages of the northern and north-eastern part of the continent. It was inflected and sexdenoting. Its roots were monosyllabic, each ending with a vowel; and the meaning of the word frequently depended upon the tone. The Bushman language was of a much more primitive type. It was not sex-denoting; it was hardly inflected at all; and it abounded in the uncouth sounds known to philologists as 'clicks.' Of these sounds, however, four-and those the most easily pronounced —were in use among the Hottentots; or five, if we reckon a guttural peculiar to a few dialects of the Hottentots and Bushmen. The discovery of these linguistic facts threw unexpected light on Hottentot origins; and it is now generally accepted that the Hottentots are of mixed descent, probably due to the intermarriage of men of North African -that is, Hamitic-lineage with women of Bushman race. This mixture may have begun in the N.E. of the continent. The suggestion has been made that the primitive ancestors of the Hottentots were a band of Egyptian soldiers said by Herodotus (ii. 30) to bave deserted in the reign of Psammetichus, and to bave taken service in Ethiopia, where the king gave them a tract of land in the occupation of his enemies, on condition that they conquered and settled it. They would necessarily, it is argued, have taken the women of the country, if they had none of their own. The hypothesis is, of course, no more than a guess, and a guess which gives rise to a number of difficulties; but to dismiss it leaves the main theory untouched. The mixed race, thus constituted, for some reason—possibly the important of Bentu on their createst seates. the irruption of Bantu on their ancestral seatsleft those seats and fled to the south. As they were a pastoral people with flocks of long-haired sheep and herds of cattle, they were compelled to turn westwards, so far as to avoid the zone of the tsetse-fly. Continually journeying, impelled by causes which we do not know, but among which the pressure of Bantu on their rear may not have been the least, they came at length down the western side of the continent to the Cape. A series of straggling tribes, they kept continually in the zone of the best pastnre between the sea and the mountains or deserts of the far interior. Finally they settled, since they could go no farther, in a wide territory from Great Namaqualand to the shores of the Southern Sea, from Walish Bay

to the month of the Umtamvuna River, the present boundary between Natal and Cape Colony. Their immigration seems to have taken place at a period not long before the discovery of the Cape, and to have been contemporaneous with the advance of the Bantu down the Eastern side of the continent. It was the latter advance that stayed the progress of the Hottentots to the shores of the Indian Ocean.

The Hottentots of Cape Colony have, for the most part, been exterminated or driven northward by wars with the colonists and servile oppression; or they have suffered from the mingling of European blood, have learned to speak a European language, and adopted Christianity. Beyond the Orange River the Korana (who are emigrants from Cape Colony) and the Namaqua have been somewhat more successful in preserving their racial purity, such as it was, from white contamination. But they have not been able to resist the disastrous pressure of European culture any more than of European arms. They are a dwindling folk; and—more rapidly than themselves—their language, their traditions, and their ancient institutions are disappearing. Their language was investigated more than thirty years ago by Bleek; but their traditions and their institutions have never been the subject of any searching scientific inquiry on the spot. Hence the attempt to produce an intelligible outline of them is attended with some difficulty.

2. Characteristics, organization, and culture.—
The name 'Hottentots' is of doubtful origin; probably it was a contemptuous term bestowed by the Boers. The Hottentots proudly called themselves Khoi-Khoi, 'Men of men.' They were, like the Bushmen, of a dirty-yellowish colour, frequently described as olive, with crinkled hair growing in small tufts, and with pointed chins. The women were distinguished by an extraordinary deposit of fat on the haunches, known scientifically as 'steatopygy.' But the Hottentots were not, like the Bushmen, a diminutive race, though by no means tall as compared with Europeans. Their wealth, as already intimated, consisted in flocks and herds. Hence their settlements were never permanently attached to one spot, and they were separated from one another by the spaces necessary for pastnrage. The huts were of hemispherical shape; they were made of rush mats on a light framework of wood, and were easily removed and transported from place to place. Of agriculture the Hottentots knew nothing, though they seem to have taken kindly to it under European masters (Theal, 173; Stow, 240; Kolben, 38; Fritscb, 320).

This nomadic mode of life was, of course, compatible with only a very loose organization. There

patible with only a very loose organization. There were a number of independent tribes, the chiefs of which were assisted, or sometimes controlled, by the elders of the various families. Between these tribes, and indeed between the smaller social units of which the tribes were composed, there was little cohesion; frequent, if desnitory, feuds were engaged in. Hence they easily fell a prey to the colonists. Our information as to the internal relations of the kindred is very incomplete. Neither the old travellers nor the nodern writers on the people have understood them. Their reports, therefore, present contradictory features difficult to reconcile. The time for fruitful inquiry among the people themselves has now passed for ever; and any opinion about the family organization can be expressed only with much besitation. That the rule was patriarchal and that inheritance was from father to son, or, failing sons, to the nearest male relative, to the exclusion of women, affords a presumption that the organization was by clans reckoning descent only in the male line. On the

other hand, in spite of polygamy, the women appear to have taken a high position. The wife was the rnler of the house, to such an extent that a man could not venture without her permission to take from the vat so much as a mouthful of sonr milk produced by the family cows. His nearest female relatives, we are told, punished a violation of this rule by a fine of cows and sheep 'to be added to the stock of the wife.' Contrary to the Bantu rule, the eldest daughter milked the cows. A man's most sacred oath was by his eldest sister 'and if he should abuse this name, the sister will walk into his flock and take his finest cows and sheep; and no law could prevent her from doing so.' Moreover, she might inflict punishment on him, though adult, for an infringement of the rules of courtesy and the code of etiquette. A woman might even become chief of the tribe, if of energetic character and the widow of a chief who left a son not yet of age. From these and other enstoms we infer that, if the organization was patrilineal, the opposite or matrilineal organization had left abundant traces on it (Hahn, Tsunigoam, 18-21).

When discovered, most of the Hottentots already possessed iron and copper weapons and tools. They had probably brought the knowledge of smelting from their original seats. Such weapons and tools, however, were valuable, and the Hottentots were not entirely emancipated from the Stone Age. They were a brave and independent people, as filthy and irresponsible as savages usually are, sensual, and easily provoked to anger,

but kindly and hospitable.

3. Witchcraft and witch-doctors.—Like all peoples in the lower culture, the Hottentots were believers in witchcraft. To this canse they attributed sudden accidents or pain, and all serious sickness. Our anthorities have left us no account of the process of bewitching. It was doubtless founded, as everywhere else, on sympathetic magic. For corpses were believed to be used for this purpose; and other practices point to the same order of ideas. Among them may be mentioned the ceremony, at crossing a rapid river, of first sprinkling some of the water over the body and daubing the forchead with a little of the mud, muttering the while a charm and dancing (a ceremony repeated on coming ont of the water); and the requirement that a woman had to watch the fire carefully and keep it alive, or else sprinkle the ground with water without rest or cessation, so long as her husband was absent hunting. women especially, as in Europe, fell under the suspicion of witcheraft. What, if any, pnnishment was inflicted we do not know. Nor does our information extend to the transfer. formation extend to the practice, so common among the Bantu, of 'smelling out' a witch. Witchdoctors, however, as might be expected, were an institution. That their labours were not always beneficent we gather from the jealousy with which corpses were prevented by the relatives of the deceased from falling into their lands. Similar precautions were taken, for the same reason, at a birth, with respect to the placenta and the kaross (or skin-mantle) on which delivery had taken place. The witch-doctors were exorcists employed to lay troublesome ghosts. They were called in to treat the sick. For this purpose a sheep was flayed alive. If it moved away from the spot after the revolting operation, it was a sure prognostic that the patient would recover; if not, he would die. In the latter case no further trouble was taken concerning him. Otherwise the caul was minntely examined by the witch-doctor and sprinkled with buchu, the powder of a species of spirea. He then, twisting it into a cord, hung it round the patient's

The sheep was eaten by the men, women, or children of the kraal, according to the sex and age of the patient. If the treatment failed, the witch-doctor resorted to simples, of which these practitioners are said to have had a good knowledge. They were also skilfnl surgeons, performing the operation of blood-letting, curing snake-bites, and setting dislocations. It was they probably who shaved the heads of mourners and of persons suffering from headache, and on solemn occasions slew the animals described as sacrifices. It was they who at a wedding performed the extraordinary but well-attested rite of mictnrating over the bride and bridegroom; but they are not definitely identified by Kolben, onr principal witness, with the old men who accomplished a similar ceremony at puberty rites, at funerals, and on receiving home a warrior who had encountered and slain single-handed a lion, an elephant, or some such formidable beast. They were the rain-makers; and as such their art was founded on the processes of sympathetic magic. Thus they formed an influential class closely corresponding to the witch-doctors or medi-

cine-men of the south-eastern Bantn.

4. Future life and cult of the dead.—The Hottentots held that the individual, in some sense at any rate, snrvived death. As we have seen, they were at times haunted by spirits of the dead, who were deemed mischievons or malicious. Happily there was one way of preventing this. The spirit did not usually travel far from the place where the man had died. It seems that, as is widely believed in the lower culture, it was attached to the body and dwelt at or in the grave. Consequently, when a death occurred, the kraal was removed to a distance; care being taken, however, to abandon to the ghost the hut in which death had taken place, together with the apparel and implements of the deccased; otherwise removal would have been of no avail, for the ghost would follow them. We are not told that there was any organized ancestor-worship; nor does it appear that sacrifices were offered to ancestors as such. But it was the custom for a Hottentot, when in trouble, to go and pray at the graves of his ancestors (Hahn, 112); and, seeing that burials often took place in clefts and holes of the rocks, it is possible that the wild ceremonies described by an old writer as performed in covere ment have been investigated. formed in caverns may have been invocations of the departed (Kolben, 96, quoting Vogel). Certain spots, moreover, were held sacred to famous men of the past. In going by them it was usual to stop, to muffle the head in the mantle, and offer prayers to the dead man for protection of the worshipper and his cattle, and sometimes to dance round the place with singing and clapping of hands. The legends of many of these heroes were known and told. From an anecdote related by Kolben, however, it would appear that the spotoften became sacred from a vague belief, arising it may be from purely accidental coincidences, that there was something uncanny about it, such as led the ancient Greeks to hallow the shrine of a hero nnknown, or the Indians of British Guiana to ascribe to rocks and other inanimate objects a powerful spirit who must be honoured and mollified. There is no trace of a belief in future retribution. birth, not always in human form, and shapeshifting, or transformation during life, appear in the stories; for the Hottentots were in nowise different from other savage and barbarons peoples who recognized no impassable chasm between mankind and the lower animals.

5. Food prohibitions.—The Hottentots abstained from eating fish that have no scales. The Bantu also abstain from fish, alleging as the reason their similarity to snakes—a form in which their dead neck as an amulet, there to remain until it rotted | frequently show themselves to the survivors. It

may be that some such reason caused the Hottentots to abstain; but this is a mere conjecture. Swine's flesh was likewise forbidden to them—on what ground we do not know. Another food pro-hibited, at all events to the Namaqna, was the flesh of the hare. The reason usually assigned for this was the part taken by the hare in the saga of the origin of death (ef. *ERE*, vol. iv. p. 412°, and vol. v. p. 706°), common in one form or other to all the soit harrison peoples.

There is, however, another and a deeper reason for abstention from hare's flesh. The Namaqua share with the rest of the uncivilized world the belief that he who eats the flesh of an animal absorbs that animal's qualities and becomes like it. To eat the flesh of the lion or to drink the blood of the leopard or the lion is to acquire the courage and strength of those beasts. In like manner to eat hare's flesh is to become as faint-

hearted as a hare (Hahn, 106).

6. Moon and stars.—In connexion with the tale of the origin of death it may be observed that there is some ground for thinking that the moon was invoked by the Hottentots. At new moon and at full moon they spent the night in dancing, singing, and merrymaking. One old writer also speaks of their sitting at new moon on the banks of a river and throwing balls of clay into the water. It is by no means clear what was the exact meaning of these proceedings. It is possible that they were a rain charm. The older writers may be roughly divided into two classes—those who denied that the Hottentots had any religion, and those who attributed to them an idea of God as lofty as their own. Both these representations may safely be discounted. The ceremonies at new and full moon, discounted. The ceremonies at new and full moon, which, we are told, no inelemency of weather prevented, may be, as Kolben (p. 96) emphatically asserts, 'religious honours and invocations to the moon,' and yet his conclusion, that she was an 'inferior visible god, the subject and representative of the High and Invisible,' may be altogether beyond the mark. Since she was held to influence the weather, the rites were probably intended to induce or magically compel her aid. More than that cannot safely be said. Certain of the constelthat cannot safely be said. Certain of the constellations also were known and named. At the first rising of the Pleiades after sunset a religious dance was held, with prayers to Tsuni-goab for rain. Stars were said to be the eyes or souls of the deceased—which points to a belief in the postmortem transformation of the dead into stars part mortem transformation of the dead into stars, not unlike that entertained by some of the Anstralian

7. Omens.—Many animals were observed for omens. If a hare crossed the hunter's path, he would return home; on the contrary, if it ran in the same direction as he was going, it was a good sign. The korhaan (otis kori) brought lack if it did not fly far from the hunter and soon again sat down. A certain kind of chameleon creeping on a hunter or his weapons or belongings, while he rested on the road, prognosticated success. This, rather than any worship directed to the insect, is the probable explanation of the rites so graphically described by Kolben and in general terms con-firmed by Hahn as performed when the mantis appeared. It was, for some reason unknown to us, regarded as a favourable omen of the highest significance. If it was to for as to elight on more significance. If it went so far as to alight on man or woman, the fattest ox belonging to the kraal The lucky person received the entrails was killed. and fat, and wore the caul twisted about his neck and lat, and wore the caul twisted about his next nntil it rotted off, or until some other person was honoured by the mantis in a similar way. The flesh of the ox was boiled, and the men or the women feasted on it according to the sex of the person on whom the mantis had alighted. The mantis, of course, was never killed or injured, for to do this would turn the omen into disaster and destruction (Kolben, 98).

8. Mythology.—Hottentot mythology, so far as it has descended to us, is meagre. Setting aside stories relating to the lower animals (many of them, as might be anticipated, etiological), it is concentrated chiefly on the adventures of two mythical beings, who were the subjects of tradi-tion and the object of worship—Tsuni-goab and Heitsi-eibib. The latter was a sort of culture-hero among the Namaqua and their neighbouring tribes. The traditions concerning him can only be summarized here. He was born, according to one tale, of a young girl who had chewed a kind of grass and swallowed the juice. The boy was as remarkable as his birth. He committed incest with his mother. He killed monsters. He fought and conquered great lions, and put enmity be-tween the lion's seed and mankind. He cursed the lion and the vulture. To his commands are ascribed the habits of these creatures, as well as certain the habits of these creatures, as well as the fruit of a raisin-tree, which is consequently prohibited; in fact, it causes dysentery. He returned to life. He was an adept in shape-shifting. Another legend represents him as being born again as a young bull from a cow pregnant from eating grass. He appears finally to have died, for his graves are found all over the country, usually in mountain passes. Natives who go by throw pieces of clothing or other articles of no value on them of clothing or other articles of no value on them for luck—a common practice also among Bushmen and indeed at wayside shrines in all parts of the world. Sometimes more substantial offerings of honey or honey-beer are made. He is glad when men thus honour him. He still gives the Khoi-Khoi good advice, tells them how to kill the lion's children and other wild animals, and prevents danger from befalling them, if they honour him. These stories present few traits not common to those of mythical heroes elsewhere.

The other personage is more important. He seems to have been known to all the Hottentots.

seems to have been known to all the Hottentots. His name, Tsuni-goab, also written Tsui-goab, and in other ways, is nsually translated 'sore (or wounded) knee.' The story told by an aged witch-doctor in explanation to Mosat was 'that Tsui'kuap was a notable warrior of great physical strength, that in a desperate struggle with another chiestain he received a wound in the knee, but having vanquished his enemy his name was lost in the mighty combat which rendered his nation independent, for no one could conquer the Tsui'kuap (wounded knee)' (R. Mosat, Missionary Labours... in S. Africa, London, 1842, p. 258).

This derivation, however, is discredited by Hahn, who interprets it as 'the Red Dawn.' His reasons

who interprets it as 'the Red Dawn.' His reasons are chiefly philological, elaborated under the influence of the mythological theories current in the middle of last century. But he adduces two other considerations—that the Korana believe Tsūi-goab to live in the Red Heaven or Rcd Sky, and that another mythological personage whom he equates with him, called 'The man whose body has a brass-coloured backbone,' was addressed as 'Thon who paintest thyself with red ochre.' These reasons are obviously insufficient. Another account of Korana belief makes Tsnni-goab dwell beyond the blue sky in a light sky. Red ochre is beyond the blue sky, in a light sky. Rcd ochre is a substance commonly used by savages to paint themselves and the objects of their reverence; and it was so used by the Hottentots. When praying for rais at the rising of the Bleinder some of the for rain at the rising of the Pleiades, some of the tribes, when Hahn wrote, still addressed Tsūi-goab in a traditional song as 'Father of the Fathers.' The question of his true character depends largely on the way in which we are to construe this phrase. A Korana tradition declares that he made two persons, a man, Kanima (Ostrich Feather) and a woman, Hau na Maos (Yellow Copper). He gave them cows,

whose milk they should drink, a jackal-tail to wipe the perspiration off the brow, a staff with a club (kiri), a quiver with arrows, a bow, and a shield. From Tsui-goab they expect all good things (Habn, 105).

Hahn, who found this statement among his notes, is uncertain of its source, but attributes it very likely to a missionary, Wuras. The last sentence, it is to be noted, seems a summary of what the reporter understood to be the mental attitude of the Korana towards Tsuni-goah. It may mean uo more than what we have already learned concerning the Namaqua and their hero.
The general import of the tradition has been interpreted as affirming that Tsuui-goab was the Creator of mankind. A careful consideration, however, will hardly endorse this construction.

'The obvious and natural interence,' remarks A. Lang on the whole evidence, 'is that Heitsi Eibib and Tsui Goab were and are regarded by their worshippers as departed but still helpful ancestral warriors or medicine-men. We need not hold that they ever were actual living men; they may be merely idealised figures of Khoi-Ehoi wisdom and valour. But that in the opinion of their worshippers they are but dead men, there seems no doubt at all' (Myth, Ritual, and Religion, London, 1837, ii. 20; cf. 2nd ed., 1839, ii. 44).

Statements by Kolben, pointing to monotheirm

Statements by Kolben pointing to monotheism, or rather dualism, are now generally recognized as due to a misuuderstanding usual in the age in which he wrote. Accurate investigation of savage beliefs was then hardly known. Investigators were obsessed by the desire to identify the objects of heathen worships with those known to them in Christianity. Such information as they obtained was dragged out of reluctant savages, who themselves had probably no definite ideas on the subject, and were, moreover, confused by the interrogations, or only too willing to mystify the inquisitive white man; and it was hastily misinterpreted in

accordance with the inquirer's prejudices.
9. Bodily mutilations.—On the other hand, when Kolben speaks of his own knowledge as eye-witness, he is generally to be depended on. His account of the custom of excision of the left testicle from every youth at or before puberty (p. 112) has been rejected by other writers, uotably hy Fritsch, who argues that he was deceived, in spite of his minute description of the rite and repeated per-sonal examination of the victims themselves (p. But it has been accepted by Theal, who

states that

'it is practised at the present day by people [probably the Berg-Damara] who are certainly not of Hottentot blood, but who must have derived their language and many of their customs from Hottentot conquerors in bygone times' (p. 87).

It is, in fact, one of many species of sexual mutilation, more or less cruel and senseless, practised in various parts of the world, of which it can only be said that, while they are probably due to some superstition, their exact origin and purpose are still unknown. Many Hottentot women were mutilated by the amputation of one or more of the joints of the little finger. Kolben asserts that the custom was confined to those who married more than once, a fresh joint being cut off before every fresh marriage (pp. 158, 306). It has been found, fresh marriage (pp. 158, 306). It has been found, however, practised upon children of Bushmen, Berg-Damara, and Kaffirs, as well as of Hottentots (Hahu, 87). Kolben's experiences were confined to the trihes of the Colony, and it seems probable that the custom and the motive varied. Such a sacrifice by a widow before a second marriage may have been to elude the vengeance or to mollify the ghost of her deceased husband. Inflicted on a child (usually a girl), it may have been intended to ward off some misfortune, feared perhaps from the action of ancestral spirits (Fritsch, 332). But our data are not sufficient to enable us to determine the motive with accuracy.

It may he added that many Hottentot beliefs and rites seem to have been shared with tho Bushmen, or, at all events, to have been influenced | anarchism of the Anabaptists and by some of their

by them. Such (to take only a single example in addition to the mutilation of the flugers) is the revereuce for the mantis, which among the Bushmen is counected in some way, to us obscure, with Cagn, their hero or divinity. At present, however, our knowledge of Bushman is as meagre as that of Hottentot institutions. This fact is sufficient to indicate the essentially provisional character of many of the conclusions expressed (not without diffidence) above.

LITERATURE.—Notices and accounts more or less fragmentary are to be found scattered through the writings of the older travellers and missionaries. The fullest and most accurate information is given in P. Kolben, The Present State of the Cape of Good Hope, tr. Medley, 2 vols., London, 1731 (vol. i. alone relates to the Hottentots and has been alone cited above); and of more recent works in G. Fritsch, Die Eingeborenen Süd-Afrika's, with an atlas of portraits, Breslau, 1872; W. H. 1. Bleek, Reynard the Fox in South Africa, London, 1864 (a collection of Hottentot folk-tales chiefly from MSS in Sir George Grey's library at Cape Town); T. Hahn, Tsuni-qoam, The Supreme Being of the Khoi-Khoi, London, 1881; G. W. Stow, The Native Races of South Africa, ed. Theal, London, 1905 (a painstaking but incomplete work, the author having died before half his task was finished); and G. McCall Theal, The Yellow and Dark-skinned People of Africa south of the Zambesi, London, 1910.

HUGUENOTS.—French Protestantism was a native product of 1512-59. It had no roots in the past, for the Alhigenses (q.v.) had been exterminated, the Waldenses (q.v.) had emigrated, the university of Paris was the centre of Scholasticism, and the reforms of Gerson contemplated no breach with mediæval theology. Except for the encouragement given by the sight of other successful revolts from Rome, it owed little to foreign influences. On the other hand, the system of doctrine thought out by Calvin, and the organization olaborated in Paris, have been adopted to some extent in every Protestant country except Scandinavia; while Freuch Protestant exiles have enriched, not north Europe alone, but America and South Africa.

Jacques Lefèvre was the Erasmus of the Freuch

reform, laying hillets he feared to kindle. By 1512, following the example of Colet, he published a new annotated Latin version of Paul's Epistles, recognizing his doctrine of justification. In 1523 he hegan to revise the classical French version of the Vulgate. But the group of Humanists, protected at Meaux by the bishop, did little more than reform that diocese and leaven it with evangelical preach-The political situation was dominated by the fact that Francis I. in 1516 made a Concordat with Rome, wherehy he recognized the Papal rights of Rome, whereny he recognized the Papai rights of canonical institution and of exacting annates, and secured for himself all valuable ecclesiastical patronage. With the clergy thus rendered subservient, no motive remained for the Crown to desire reform. The Council of Sens (1528-29) desire reform. The Council of Sens (1528-29) showed that the ciergy were equally content, now that all French sees and abbeys wero reserved for them. The nobility, however, found their feudal rights and their material resources rapidly diminishment of the council of the counc ing, and were accessible to new ideas. And in the Third Estate, craftsmen and retailers suffered by the influx of precious metals, and they also provided a receptive soil.

The leader was John Calvin (1509-64), a Picard, trained in theology and law (see Calvinism, vol. iii. p. 146 ff.); hut in 1534 he had to fice owing to his friend Nicolas Cop advocating evangelical views in his rectorial address at Paris. Finding that the movement was imperilled by the supposed tenets, he published in 1536 the Institutes of the Christian Religion, casting the purified metal into the old monlds, but adding two sections dealing with the current slanders, and dedicating the work to Francis. The book was the first valuable dogmatic treatise, and soon was enlarged and translated widely. A revision of Lefèvre's Bible version in 1535 by another Picard, Olivétan, and the appearance of Clément Marot's metrical version of the Psalms, were other treasured aids.

Some adherents were exasperated by the refusal of the clergy to reform, and their placarding of handbills attacking the old doctrines and usages irritated the Catholics. Francis had wavered for a time, but, when he found one of these broadsheets on his bedroom door, he adopted a policy of extermination, announced in 1535, and seldom abandoned during the century. An organized congregation discovered at Meaux in 1546 was stamped out, but the movement spread. Henry II. (1547–59) created a special committee of the Paris Parliament—the chief organ of justice—to systematize the prosecutions. They proved ineffective, and by 1555 a congregation was formed even in Paris, while four years later a synod of twelve congregations met and organized a National Evangelical Church. A confession was adopted, reflecting the influence of Calvin. His plan of governing each congregation by minister and elders was followed, and a system was begun of linking the congregations by synods of ministers and elders, much as the South German Anabaptists had arranged a generation earlier. As the movement extended, local synods grouped naturally by the civil provinces and the provincial synods were finally merged in one National Synod. The plan was rapidly adopted by Presbytcrians everywhere.

was rapidly adopted by Presbyterians everywhere. The Synod of 1559 is a landmark, inaugurating a period of seventy years when the Reformed Church was an important political factor. Its appearance contributed to bring about peace with Spain, and an agreement between Henry and Philip to root out heresy. The discovery of this intention by William the Silent led to a certain interweaving of Netherland and French politics, and to the constant interest of the House of Orange in the French Protestants, for whom William's little Principality on the Rhone often served as a

refuge.

With the accession of Francis II. a few weeks after the Synod, the family of the Guises came to power, and steadily opposed the new religion. But the illegal execution of Anne du Bourg and other sympathizers in the Parliament called attention to previous armed resistance by persecuted evangelicals, Zwinglians, Anabaptists, and Lutherans. By this time several nobles had declared themselves, including Admiral Coligny and two princes of the blood, the Dukes of Bourbon and Condé. The latter was charged by the Guises with plotting, but they dared not grant his demand for a trial, contenting themselves with massacres of the humbler conspirators. Henceforward the evangelicals met openly in armed conventicles, and the 'Hugonots' were suddenly recognized as a power in the land. The name, originally thus spelt, seems to have been bestowed first at Tours, where the favourite place of meeting was near the gate of St. Hugon.

With the accession of Charles IX. (1560-74), the queen-mother, Catherine de' Medici, brushed aside Bourbon, the first prince of the blood, and became regent. For a year there seemed a chance that she would belie Knox's fears as to 'the Monstrons Regiment of Women,' and imitate the revolution just carried through by Elizabeth in England. The second period of the Council of Trent had closed, but its decisions were not allowed

to be published officially in France. The States-General assembled in 1561 reflected the division of the nation: the clergy, of course, wanted no change; the nobles were unable to draft any unanimous requests, while many called for tolcration; the Third Estate demanded religions liberty for all, and lay control over ecclesiastical matters. Coligny brought up a definite programme: biennial assemblies, free election of the higher clergy, nationalization of much property in ecclesiastical hands, and a national council under the king to settle religion. All that he gained was a snspension of persecution, and a religious conference.

The Huguenot spokesman at Poissy was Theodore de Bezc, a close friend of Calvin, but no Knox. He made, however, such a deep impression that the clergy saw it was politic to offer large funds for the public needs; and, by reserving the right to fix the quota themselves, they ensured the frequent convoking of their Estate, even if the States-General lapsed. Therefore the Edict that issued in 1562 conceded nothing more to the Reformed than the right to private worship within doors, or public worship outside walled cities. Hereupon both parties prepared for civil war.

For more than sixty years France was rent by the struggle, though it was suspended so often that nine successive wars are reckoned. The outbreak was at Vassy, where a congregation meeting publicly within a walled town, and therefore illegally, was massacred by the Guises without ceremony. In the intervals of fighting, it became clear that a Counter-Reformation had begun, and that the zeal of the preachers trained at Geneva was offset by the subtlety of the Jesuits. The movement was much transformed in 1572, when catherine was hurried by Italian advisors into authorizing a general massacre of all Huguenots, beginning with the royal guests. The princes of the blood were saved by a forced conversion, but every other leader of note fell, with thousands of lumbler adherents. The survivors perfected their organization on quite representative lines, till there appeared a State within the State, independent of the feudal nobility and of the Crown.

With the accession of Henry III. (1574-89), two other parties defined themselves: the League of thoroughgoing Catholics, who copied the Huguenot organization, and the Politicals, who aimed at internal peace and the exclusion of foreign influence, as of the Guises and Catherine. The States-General of 1576, packed by the League, declared for unity of religion. When Henry of Navarre, who had retracted his forced conversion, became heir-presumptive in 1584, the League was driven to a policy of exclusion. Four years later, the States-General declared against even toleration; but the arrogance of the Guises led to their assassination by order of the king, and, with the death of Catherine and the counter-assassination of the king, Navarre succeeded as Henry IV. (1589-1610).

The Leagne was so strong that Henry found it politic to become a Catholic in 1593; he was able to banish the Jesuits next year, and in 1598 to grant the Edict of Nantes, destined to continue for 87 years, in great contrast to its many ephemeral predecessors. This declared Catholicism to be the established religion, maintaining the obligation of tithes and of the marriage laws; but it stopped persecution and recognized freedom of conscience, with the right of private worship anywhere. The 'so-called reformed' public worship was legalized in every place where it was then actually practised—about 200 towns, with five chief cities excepted; also in many thousand castles of the nobles, and in two places within every bailiwick. All synods were authorized to meet. On the civil side, not only were full civic rights guaranteed, and for

ministers such treatment as the clergy received, bnt committees of Parliament dealing with cases involving Protestants were to have Protestant As a temporary measure, about 200 members. towns were left in their military possession, the garrisons being paid by the State. Rapid development ensued; schools and 'temples' arose in numbers, with theological colleges at Nîmes, Saumur, Die, Sedan, Montanban, etc., while domestic piety was nurthred by the Genevan revision in 1588 of Olivetan's Bible.

With the assassination of Henry IV. and the accession of his son, Louis XIII. (1610-43), the tendency to absolute royal power increased, as was shown by no States General being convoked after 1614. During the minority, the Jesuits quietly returned, and won many of the clergy to Ultramontane views. The rise of Richelieu in 1624 frightened the Huguenots into revolt, and, when La Rochelle fell after four years, their separate political existence ended, and their fortifications The Peace of Alais were demolished everywhere. in 1629 inaugurated a third period, when they were merely tolerated as inferiors, without any guarantee that the Edict of Nantes would be observed. Henceforth the nobles dropped off, as with the English Puritans after 1660, and the party became chiefly middle class.

Richelieu and Mazarin, however, gave the Protestants fair play, so that in the tronblons days of the Fronde they were loyal. Devoting themselves to manufacture and trade, and not being handicapped by cessation of work on saints' days, they gained nearly a monopoly of weaving wool, linen, and silk. Though they can hardly have mustered more than one million people out of fifteen millions, their importance was far greater. The Edict of Nantes was construed liberally, and public worship was actually maintained in 631 principal places, with 231 others subordinate. The synods met freely, though the National Synod needed special authorization, and a royal commissioner presided. Thought ripened apace under these conditions, and, while in Britain the doctrine of the Divine Right of Presbyterianism was hardening, the Huguenots preserved a more open mind. Daille's Traite de l'emploi des saints pères, written in 1632 and translated by 1651, did much to break down the authority of the Fathers and exalt the Bible. At Saumur also were sown the seeds which, transplanted to England, were to produce the Deists, though the later emigrants, such as Mauduit, Gailhard, de Luzancy, took the field against Socinianism.

At this time the Huguenots were important enough even to influence foreign affairs. The Synod of Charenton in 1644 condemned the Independents as a sect projudicing the Church of God. On the execution of Charles I., Amyraut and Bochart published books on the Divine Right of Kings, two others translated at The Hague and at Orange the Eikon Basilike, while de Saumaise and Pierre dn Moulin, rector of St. John in Chester, put forth royalist Latin paniphlets. William Dugard, Master of Merchant Taylors', translated de Saumaise into English and printed it on his own press. He was soon converted, rather forcibly, and not only did he publish Milton's response, but he became 'Printer to the Council of State' and actually issued from 1650-57 a weekly French paper in London, manifestly designed to win the Huguenots to sympathy with the new regime. Louis du Moulin, Pierre's brother, son of James's friend, accepted the chair of history at Oxford in 1648, and in 1680 published a work on the Conformity of the Discipline and Government of the Independents to that of the Ancient Primitive Christians. The libraries of Arundel, Sancroft, and Charles II. were

in charge of Hnguenots, and the court of this king even had an official Huguenot ambassador.

These halcyon days ended soon after the collapse of the English Commonwealth withdrew the only possible external protector. When Mazarin died in 1661, Louis XIV. (1643-1715) assumed power, and declined to receive a deputation of pastors come to congratulate him. Local self-government and constitutional methods were rapidly vanishing. Nobles and gentry were invited to court and led into extravagance, or were ignored at home. the provincial governors were practically superseded by obscure lawyers (intendants) wielding powers as absolute and as illegal as Cromwell's Major-generals, like whom they were backed by an irresistible army. As the States General never met, National Synods also ceased after 1660; provincial States and Parliaments declined in importance; and arbitrary Edicts became the only laws. When, therefore, an aggressive Company of the Holy Sacrament set itself against toleration, and the one survival of the old times was the Estate of the Clergy, often convoked to tax itself, the danger was obvious, and there was no constitutional protection.

Troubles began at Montanban when a quarrel between Protestant and Jesnit students served as a pretext to banish the college, to confiscate the premises, and to impose a garrison on the town. Commissioners now started to seek for buildings, etc., not anthorized by the Edict of Nantes. Systematic repression began with the walling up of the temples in the Pays de Gex, a recent addition to the kingdom. In 1666, hundreds of local decisions were codified as a guide, but an emigration began, and on remonstrance from the Grand Elector the code was revoked. Foreign wars further distracted attention, and for a time the chief evils were displacement from civil and municipal office, or

displacement from control confiscation of corporate property.

After the peace of Nijmwegen in 1678, the of seven were declared capable of conversion, and inquiries were set on foot as to age; a bench had to be provided in every temple for opponents, who were at liberty to interrnpt the services and argue; ministers were forbidden to remain more than three years in any place. At length dragoons were quartered on the Protestants, with no restraint on their behaviour, and with orders to arrest prominent men, to batter down the temples, to seize the pastors. Emigration revived in 1681, and there was a temporary check; but, when England received a Catholic king in James II., the last external protector seemed gone, and every imaginable wrong to person and property was now inflicted broadcast. Half the Protestants were thus coerced, and so large was the supposed number of New Converts, that on 17th October 1685 the Edict of Nantes was revoked as no longer necessary. All Reformed worship was to cease at once, and all pastors wero to quit the realm in a fortnight. Within a few weeks 800 temples wero demolished, and all corporate property was lost.

Emigration was forbidden, and all refugees caught were sent, men to the galleys, women to prison, their property being confiscated; but, though every frontier was patrolled, the exodus was general. Paris alone lost 1200 Huguenot families out of 1933; the intendant of Normandy soon reported 20,000 people missing from Rouen, 184,000 from his province; Nantes bewailed the loss of her workmen, Lyons had 14,000 looms silent and only 4000 working, Tours only 1200 instead of 80,000; woven goods were in future imported instead of being exported. The number of emigrants at this time along come to have accepted. grants at this time alono seems to have exceeded 300,000, peasants, traders, manufacturers, nobles.

The ambassador in London sent word that 960,000 louis d'ors had been brought to the Mint for conversion into English coins; the total loss in mere gold was soon estimated at 20,000,000 livres. Marshal Vauban indeed trebled this figure, but was more in his element when saying that France had lost 8000 sailors, 10,000 soldiers, and 500 officers.

These exiles rallied round the prince of Orange, and for a generation cherished the hope of compelling some restoration and even of reforming the whole Gallican Church. New Huguenot regiments were soon embodied in Dutch pay. When William went to the rescue of England in 1688, his aidesde-camp were all French, the second in command was Marshal Schomberg, and the engineers and artillery were under other Huguenots. When the war was transferred to Ireland, every band of the exiles sent recruits; Schomberg fell fighting at the Boyne; Ruvigny saw the fall of Limerick, which ended the war. On the sea the exiled sailors had their share in the victorics of La Hogue. But on the Continent, Louis was almost uniformly successful, and the peace of Rijswijk in 1697 depressed the hopes of the emigrants.

A second opportunity came with the war of the panish Succession. The prince of Orange was Spanish Succession. indeed dead, his principality was overrun by Louis and its Protestant population fled, but the Camisards (q.v.) made a serious diversion in the Cevennes while Louis was losing in Bavaria and the Netherlands. The Huguenot exiles this time fought in Portugal, and at Almanza in 1707 a new regiment of Camisards, commanded by Jean Cavalier, bayoneted a whole regiment that had figured in the Cevennes atrocities. The treaty of Utrecht in 1713 destroyed all hope of repatriation, and Louis could at last pretend to believe that Protes-

tantism was extinct in France.

Huguenot influence was diverted in its flow from the main stream into many other channels. This began far back in its history; as early as 1536 some preferred England to France; thirty years later many silk-weavers set up their looms in the crypt of the metropolitan church of England, where Coligny's brother is buried and where their descendants worship to day; Southampton has a 'God's House' whose records begin with 1567. Shakespeare lodged in London with Montioy of Creçy, and his *Venus and Adonis* was printed by the successor of Vautrollier. James I. had two Huguenot doctors, Chamberlen and Mayerne, and invited to court Casaubon and dn Moulin. Germany had been ravaged by the Thirty Years' War, a French church arose in Berlin in 1661. And the outflow from 1680 onwards was so great that the bulk of the streams. This may be noted from France to enrich other lands. This may be noted

specially for Brandenburg, Holland, and England.
The Great Elector replied at once to the revocation of the Edict of Nantes by the Edict of Potsdam, offering free transport from Frankfort, Cologne, or Amsterdam, free farms or houses, new churches, freedom from taxes for ten years, State support for ministers, their own judges. Waste support for ministers, their own judges. Waste lands soon blossomed with unknown vegetables, hemp, flax, and tobacco. The site of Magdeburg, desolate for fifty years, became a home of weaving and trade; Halle rose to rival Leipzig; Berlin gained all manner of manufactures; metal-workers fashioned tin, iron, and copper; to the West Indies and West Africa sprang up a brisk maritime trade, which, however, passed to Holland in 1720. French doctors revolutionized medicine, the gentry remodelled the army, scholars popularized Cartesian. ism, a college arose in Berlin, and a university at Frankfort-on-Oder. Society was created at the capital by them; the second and third kings of Prussia were brought up by a refugee.

The immigration to Brandenburg down the Rhine left many settlers by the way. Geneva gained 3000 inhabitants and the watch-trade as some recompense for boundless hospitality; a score of colonies arose in Württemberg, where French synods met until 1822; Homburg still maintains a French service; a village in Fulda yet keeps up the speech and customs of its founders. But the ravaging of the Palatinate hastened the steps of most of the exiles on to the Mark or the Netherlanda.

The Calvinists of Holland gave an abundant welcome to their brethren. Collections were organized and loans granted, with support for the pastors; the craftsmen were allowed to practise and even welcomed into the gilds; and taxes were not levied for a term of years. Soon a synod of 202 exiled ministers met in Rotterdam, which visitors declared to be well-nigh French. Richly did the Huguenots repay their hosts. Some went to the colonics; in 1664 other exiles occupied Staten Island; and a New Rochelle arose on the banks of the Hudson. Under another flag the banks of the Hudson. Under all received naturalization in 1703. Huguenots filled Paramaribo; to the Cape went ont a large contingent; and, though by 1739 the French tongue was compulsorily displaced, so that La Perle became Paarl, yet the Jouberts and Villiers are no small asset in South Africa to-day.

In the Netherlands themselves, Bayle and Jurieu brought the traditions of Sedan to Rotterdam; Claude, rival of Bossuct, whose influence was so dreaded that he was escorted from France at a day's notice, wrote at William's request a story of the persecution so effective that James burned it publicly; Saurin, after fighting in Savoy, studying at Geneva, preaching in England, added to the lustre of The Hague for a quarter of a century; Martin at Utrecht devoted himself to revising the Genevan Bible, and by 1707 completed a work that is still standard. For a century fine literary magazines in French streamed into France, Britain, and Germany; some of the editors also founded the first English magazines in London. Friesland settled her wastes, Utrecht gained a new silk and velvet trade at the expense of Amiens, Amsterdam added to her maritime trade 13,000 makers of silk, wool, linen, paper, and books. And, when it became clear that there could be no return, a general act of naturalization in 1715 encouraged the immigrants to melt into the general stock of burghers.

It might have been expected that Scotland would have rivalled Holland in its welcome, but only a few cambric-workers settled in Edinburgh. England kept up its Tudor traditions; Charles II. granted letters of denization freely from 1681, and appointed the archbishop of Canterbury with the bishop of London to aid the immigrants. In four-teen years £125,000 was subscribed, and doubled by public grants, whose interest went one-fifth to the pastors and four-fifths to start the others in business. Ipswich began to produce linen and sails; Norwich renewed its weaving, adding eutlery and clocks; Kent and Hampshire saw paper mills, Sussex glass factories; Wandsworth replaced Rouen as the source for hats, supplying

even cardinals.

London attracted most of the settlers, especially when William of Orange became king, and a proclamation trebled the inflow. In 1701, Defoe and the control of the control The True Born Englishman, pt. i. line 361 ff.) could point to the new leaven:

Your Houblons, Papillons, and Lethuliers Pass now for true-born English knights and squires, And make good senate-members, or lord-mayors.

Papillon and Dubois, indeed, were the sheriffs on whom Shaftesbury relied in the agitation on the Exclusion Bill twenty years earlier. Separate

services were maintained at first; thirty new churches arose, especially in Spitalfields, where the silk industry soon increased 2000 per cent, and in the new quarter of Soho. Some of the pastors, however, threw themselves into English life; de l'Aigle from the great temple of Charenton entered the Established Church, du Veil passed through it to the Baptists, Capel of Sanmur

tanght in an Independent academy.

A club arose at the Rainbow Coffee Honse in Fleet Street, under Daudé of the Exchequer. Here met Rapin Thoyras, Le Moivre, La Croze, Coste, friend and translator of Locke, and Bayle; such men of science and letters soon created a new public feeling which embittered the popular English mind against the France of Louis XIV. Bayle's Dictionnaire was translated in 1709 by La Roche and others, and had no small share in the Deist movement; against that may be set Jurieu's Treatise of Devotion, and Drelincourt on Death. A new political doctrine, the Social Contract, was opposed to the Divine Right of Kings, by Jurieu and Abbadie; and, though they may have inherited it from the English Commonwealth men, it was destined to be taken from the Club by Voltaire and to work wonders in France by the pen of Rousseau. Scores of less known pamphleteers were the mainstay of the Whig cause for a generation; and in the rebellion of 1745, when the London merchants addressed King George, 99 out of 542 names were Huguenot, showing how large a proportion of commerce had fallen to them. This devotion to the land of their adoption was of old standing; as early as 1685 a society was formed to further true religion in England, and, fired by the new spirit of Methodism, the Christian Community labours still in Bethnal Green. No attempt was made to train new pastors in England, and the descendants of the immigrants learned not only to speak but to worship in English. Before 1760 most of the French services were discontinued; fifty years later there remained only four congregations in London, with others at Norwich, Canterbury, Southampton, Plymouth, and Bristol; to-day there are two chapels in Soho, one using the English liturgy in French. The absorption was quickened by a grant of general naturalization in 1774, and the gain in all departments of national life is suggested by such names as Chamberlain, de la Rue, Dollond, Dumaresq, Gambier, Hanbury, Labouchere, Layard, Martineau, Portal, Pusey, Rapin, Romilly.

In Ireland the great family of Ruvigny earned a new title as Earls of Galway, and Inid out a model town at Portarlington, whose school turned ont such men as the Duke of Wellington; not till 1817 did its French service cease. Fontaine and Latrobe introduced manufactures at Cork; and, though these were ruined by English legislation, Crommelin was more fortunate with the thousand wheels and looms for linen and cambric wherewith he refounded Lisburn; the French church here lasted till 1798. Waterford received manufactures and a wine trade, while its abbey resonnded with French eloquence till 1819.

Tillers of the soil passed on to America, some to Oxford in Massachusetts, thousands through New York to Pennsylvania, the home of liberty. The new and balmy Carolinas attracted most: French Santee was laid ont with vines and olives, and began to weave silk and wool. For a while the settlers looked wistfully to Louisiana, but when repulsed they gladly accepted the privileges freely tendered in the English colonics, strengthening not only the Carolinas, but Virginia and Maryland.

The Huguenots of the Dispersion thus carried with them to many a Protestant land a wealth of

probity, industry, gallantry, bistory, scholarship, science. Calvinism had too often become unlovely by transplantation; now it was invigorated and sweetened by this crossing from the parent stock. But the France which thus impoverished itself paid dearly; it was hard to believe in priests who hounded on persecution, and by 1790 the typical ecclesiastic was no longer Fénelon, but Tallcyrand. Through the insipid and putrescent 18th cent. the Huguenots of the home land not only existed, but proved the very salt of the earth.

For a generation after 1685 they had, indeed, been deprived of all public worship and of pastors. Those who ventured back by stealth were often kidnapped into secret prisons, and their sober work was ill replaced by the ministry of the Prophets. But, with the new situation created by failure in war, a new species of pastor arose to minister to the Church in the Desert, men able to inspire and to reorganize. Leading preachers were told off to conduct peripatetic schools, and synods began again whose minutes were recorded.

Even in March 1715 the aged Grand Monarch had to admit that there were many Frenchmen who on their death-beds declined the rites of Holy Church; and the revival dated from that very year. The whole reign of Louis xv. (1715-74) certainly saw the persecuting laws maintained, and often executed, and the declaration of 1724, in codifying them, even added the touch that no marriage was valid outside the Established Chnrch. But it proved as vain to fine people for absence from service as when Elizabeth tried it; and James VII.'s plan of levying on every village where the Covenanters met broke down as badly in France. Antoine Court began a seminary at Lausanne to supply trained pastors. Paul Rabant proved himself a true Apostle of the Desert. Such lange gatherings came to hear him and other leaders that in 1745 the Assembly of the clergy pressed for a rigid persecution, which for seven years sent a large stream of emigrants abroad. By 1755 the Protestants of Saintonge even dared to build Honses of Prayer. A national Synod next year showed that there were again 10 ecclesiastical provinces with 48 pastors; and seven years lateran-other showed 14, with 26 pastors and 35 licentiates. By this time Catholic fervour had died down,

By this time Catholic fervour had died down, and the soldiery did not like to enforce the laws. A crisis came after the execution of a pastor merely for preaching, marrying, and giving the sacraments; an atrocions miscarriage of justice canght Voltaire's attention, and in 1763 he issued a treatise on Toleration. With the accession of Lonis XVI. in 1774, there came to power Turgot, who even earlier had published on the same theme. When a circular letter was ordered to be sent to all bishops, he sent it also to all the Protestant pastors of the south, thus acknowledging their existence, their status, their weight. Protestant records of birth and baptism were admitted as evidence.

Lafayette returned from America with fresh ideas on freedom, and in 1787 induced the Assembly of Notables to petition for the removal of Protestant disabilities: despite clerical opposition, civil registration of birth, marriage, and death was made valid that year. With the gathering of the States-General in 1789, public worship was conducted with open doors in Paris. By March 1790 the National Assembly was presided over by a young pastor, Rabant St. Etienne, and it decreed that all property in royal hands confiscated a century and more ago from Protestant emigrants should be restored to their heirs, who might return and take np citizenship.

and take np citizenship.

During the Reign of Terror, the aged Rabant was silenced, and his brilliant descendant was

guillotined,-fates shared by other pastors,-while all buildings for worship were closed. But, when Napoleon was settling affairs in 1802, he grasped at the request of the Paris Protestants for concurrent endowment, and secured in return a control The State dictated the conover their Church. stitution, with the sessions of synods, the control of the seminary, and even the number of pastors; a veto on all appointments was reserved also. It proved that there were about 430,000 Protestants in 171 churches, with 121 pastors. There was no property except the places of worship and the seminary, which was in 1809 transferred to Montauban and annexed to the university as a faculty of theology.

When the hand of Napolcon was removed, and the Catholic Terror was over, the Church began to grow. First Scottish theology quickened native thinking, then German. Even under the Legitimists there arose a Bible Society, a Tract Society, a Foreign Mission, and an Education Society. Leave was withheld for a National Synod to assemble, but an informal meeting in 1848 resulted in a division. A minority seceded, regaining freedom, adopted an evangelical confession, and arranged for biennial synods. The moderates clung to State pay, but drafted a scheme of re-organization on the historic lines, which the State

refused to sanction.

In 1872 a National Synod met, the first since 1660, and the division was perpetuated. The general law of 1905, which separated all Churches from the State and abolished all State pay, has given rise to a third section aiming at reconcilia-tion. There are nearly 800,000 of the Reformed, meeting in 900 churches, ministered to by 1000 pastors, with good organization and equipment. The influence on the national life is so important that it is only too easy to raise an outery against the domination of the Protestants. International reputations have been won by Janet, Sabatier, and Scherer in theology, by Cuvier and de Quatrefages in science, by Guizot and Waddington in politics. The religious strength may be gauged by the honourable share taken in evangelizing the A mission to the Cape in 1829 extended world. world. A mission to the Cape in 1829 extended to the Basutos four years later, and has met with much success, while the Zambesi was occupied in 1884; within French possessions, the Tahitian and Malagasy work was taken over from the London Missionary Society soon after annexation; in north Africa there are missions at Scnegal and the Gabun, to the Kabyles, and on the French Conge.

Congo.

HUICHOLS.—This tribe, numbering to-day about 4000 souls, lives in a mountainons country, difficult of access, in the N.W. part of the Mexican State of Jalisco, on a spur of the great Sierra Madre. They are the eastern neighbours of the Coras, or Nayarits, to whom they are related by language, religion, and customs. Both tribes in the 18th cent. had been Christianized. The Coras still retain a priest and call themselves Christians, though their Christianity is to a large extent mixed up with pagan customs. But the Huichols, since the departure of the monks, have completely fallen back into their ancient religious practice, and represent a very curious survival of ancient Mexican religious faith and idolatry.

The principal god of the Huichols is Tatévali, our grandfather, the fire-god. He is the god of life and health, and the particular god of the shamans, especially of those who heal and prophesy. He was the first who sat down on a chair, and is held to be more ancient even than the sun. Some-times he is represented not by one, but by two images. One stands above ground, and the other in a cavity beneath it. The latter is invariably the smaller and the older of the two, and is regarded as closely associated with the sun after it has set, or the sun of the under world, while the upper image is supposed to be associated with the sun of the day-time, or of the upper world. There exists another form of the ancient fire-god, called Tatótsi Mara Kwari, 'our great grandfather deer-tail.' He is considered to be the spark produced by striking flint, and is the chief deer-god.

The sun is called by the Huichols Tayaú or Taú, 'our father,' or Tavêrika, 'our eagle.' It is related that the ancient shamans made Father Sun by throwing the young son of the Corn-Mother (or, according to others, the young son of young Mother-Eagle, the goddess of the Sky) into an oven, arrayed in full attire, with sandals, pouches, and tobaceo gourds, and carrying his bow and arrows. From the oven the boy travelled underneath the ground, and rose as the sun in the East. The assistant of Father Sun is Tayaú Sakaimoka, an image of whom stands on the high mesa of the Nayarits, above the Cora pueblo of Sierra del Nayarit, where the Coras and Huichols deposit eeremonial arrows and other offerings in a cave. This god is considered to be the 'scrpent-god,' represented by a zigzag line of blne colour, and was in former times 'the Sun's arrow.

The great god of the Coras and Huiehols is Tabátzi (Cora) or Tamats (Huiehol), 'our elder brother,' the god of the morning star. He is the messenger of the gods; and, when the shamans sing, he communicates their songs and whistles to the other gods. He himself is called tondami, the 'singer,' by the Huichols. He is, at the same time, declared to be the god of wind or air. He is the shooting god, who made the first arrows for the gods, the god of the hunter, and is himself represented by a

gigantic deer.
The growth of maize and other vegetables is ascribed to a goddess, called Takotsi Nākawe, our grandmother growth.' She is the mother of the gods, especially of Grandfather Fire. All the earth belongs to her, and she lives in the under world. People implore her for long life, because she is very old. The goddess enlled Tate Tulirikita, 'our mother, house of the little ones,' the goddess of conception and birth, and Tate Ika Oteganāka, onr mother the Corn, the special goddess of maize and other vegetables, seem to be other forms of the same mythological notion.

Tāté Naaliwami, the red serpent, the red cloud, is mainly a water- and rain-serpent who brings rain from the East. She is the creator of squashes and of all flowers, and takes special care of children. Her complementary deities are Tate Kyewimoka, a white serpent whose dwelling is in the West, and who brings rain from the West; Tate Rapawiyama, a blue scrpent, living in the Lagunade la Magdalena, four days' journey south of the Huichol country, who brings rain from the South; and Tate Hautse Kupúri, a yellow serpent, living in a lagoon to the north of the Huichol country, who brings rain from the North. Finally, the goddess of the heavens, Tate Vélika Uimáli, 'our mother, the maiden eagle,' is the mother of Father Sun; she holds the world in her talons, and guards everything from above, where she dwells. The stars are her dress. All these gods and goddesses are clearly recognizable counterparts of well-known Mexican

divine types.

The cult of the Huichols consists in libations, in offerings of food and drink, and in preparing cakes of the ground seeds of Amaranthus leucocarpus, called wave by the Huiehols (=Mex. uauhtli). Besides sacrifices of this kind, they offer to their gods remarkable symbolic objects. They are embodiments of prayers, or charms intended to produce the object of the prayer, and are mainly found in the god-houses and sacred eaves. Ccremonial arrows (ulu), sometimes in great numbers, are stack into the inner side of the thatched roofs of the god-houses, or into the seats of ceremonial A great many symbolic objects of various colonrs and shapes are attached to the arrows, and others hang from the roof, while on the altar may be seen rudely carved and decorated wooden images of the animals dedicated to the god.

Another kind of symbolic object is called nealtka, 'face.' These are shields, round in shape, made by interweaving pieces of split bamboo with cotton cord, or variously coloured crewels, symbolic and nythological figures being represented in the weaving. They are mostly prepared for Tayau, 'Father Sun,' and Tāte Naaliwāmi, 'Mother Eastwater.' The central part, always defined by a ring, represents the hole through which the god sees. Compare the ancient Mexican eeremonial object, called tlachieloni, 'instrument for seeing,' the special outfit of the Mexican god of fire and of Tezeatlipoca. The objects called nama, 'mat,' of rectangular shape, seem to be representative of a cloth hanging over the back of the gods. curious eeremonial objects are those called sikuli, 'eye'-crosses of split bamboo, interwoven with crewel or yarn, and resembling in the most striking way objects that are met with in Peruvian graves stuck in the soil at the foot of the mummy packet. According to the interpretation given by the explorer Charles Lumholtz, the prayer expressed by this symbolic object is that the eye of the god may rest on the supplicant.

From May to August, there are frequent feasts for making rain. During the wet season, if it stops raining only for two or three days, the principal men gather in the temple and decide to sacrifice an ox or two for the propitiation of the gods. Two children called akeli (from Spanish dageles) play an important part at these feasts. One of them belongs to Tayaú, 'Father Sun,' and the other to Tatévali, 'Grandfather Fire.' Toasted maize-cakes, made in the form of an S (symbols of the lightning, according to the symbolism of the ancient Mexicans), and others made in the form of eyes,' of feathered snakes, flowers, and dogs are tied to a twine of bark fibre and offered to the gods. They are called koka, 'bead,' neckluce,' as they are looked upon as the necklaces of the gods to whom they are dedicated. In October the feast of green squashes is held, ealled wima kwari, 'to beat the drum, the squashes representing the gourd-rattle (kaitsa)—the rattling noise which the dry seeds make inside the squash when shaken. The children are brought to the god-house, wearing on the head a sikuli, or 'eye' (which in this ceremony seems to represent the squash-flowers), and carry-ing rattles in their hands. For this feast is held in honour of Tate Naaliwami, the creator of squashes and all flowers, the special patroness of children. It is a great prayer for growth, health,

luck, and plenty to eat.

All priests and shamans use tobacco, which the Huichols, like the ancient Mexican priests, carry about with them in a gourd hanging over the back, this tobacco-gourd being the essential and most necessary outlit of priests of every class. Besides tobacco, there is another intoxicating plant which plays a very important part in the life of the modern Huichols and other living tribes of the Mexicans, as it did, according to the chroniclers, with the Chichimeks, the nomadic tribes of the northern parts of Mexico in ancient pre-Hispanic times. This plant, called in the Mexican language peyotl (by the Hniehols, Tarahumares, and other tribes of the Sierra, hikuli), is a small species of cactus (=Anhalonium Lewinii, Hennings), which grows abundantly in the central mesa, especially in a country which the Huichols call Paliatsia, not far from the mining town Real Catorce, in the State of San Luis Potosi. It is thought to be necessary to procure it every year, to ensure the country against drought; and, therefore, in October parties of from two to twelve start on a pilgrimage to Paliatsia; the journey, which is accompanied by much fasting and praying, requires 43 days. The leader of the party and the second in order

carry a nealtka ('face,' front-shield) of Tatévali, Grandfather Fire, while the rest carry those of other gods. The peyotl-seekers are supposed to be accompanied on this journey and guided by the grey squirrel. If one of them sees a peyotl, he shoots towards it, not quite hitting it, but lodging one arrow to the right, and one to the left over it. In this way every one shoots five peyotls. The plants are strung on long strings to dry. When the feast comes on, the dry plant is mixed with water and has invariably to be ground on the metate, or grinding-stone. A thick kind of drink, rather brown in colour, is produced from it, which is offered in small quantities, but at frequent intervals, to those present. This feast occurs in the month of January. It forms an integral part of the feast for eating roasted maize (raki), and is, accordingly, named Rarikira. But it cannot take place until a certain number of deer have been killed, or until the field has been cleared and made ready for the harvest of the coming year.

The greatest feast of all is that for eating maizecakes made from ground maize baked in an oven (tamales de maiz crudo). Like that of roasted maize, this feast can be held only after successful deer hunts. The heaps of tamales are dedicated by the priest to all gods. When this occurs, some of the people are appointed to blow into sea-shells five times in the day-time and five times at night. Connected with this feast is a ceremonial race performed by young men and women in separate groups. The feast is held for the under world.

ED. SELER.

HUMANISM.—'Humanism' in philosophy is opposed to Naturalism and Absolutism (qq,v.); it designates the philosophic attitude which regards the interpretation of human experience as the primary concern of all philosophizing, and asserts the adequacy of human knowledge for this pur-By thus putting man into the centre of the intellectual universe and giving to all science and literature a reference to human life and its purposes, philosophic connects itself with literary Humanism (see following article). The literary Humanism of the Renaissance, which was essentially an attempt to emancipate thought and education from what it considered the narrow scholastic routine of the mediæval Church by appealing to the civilizing mission of the 'humaner letters' (i.e. of classical, and more particularly Greek, literature), thus appears to be included in philosophic Humanism as one of its manifestations. The intellectual movement of the 5th cent. B.C. in Greece, which was initiated by the Sophists and continued by Socrates, is also to be cited as such an era of human revolt against the domination of pedantic, abstruse, and sterile speculation-in this case the systems of the metaphysical 'physithis case the systems of the metaphysical 'physicalogers.' In fact, modern Humanism is so largely and avowedly a conscious revival of the critical relativism of Protagoras and appeals so explicitly to his maxim that 'man is the measure of all things' that it may without injustice be described as Neo-Protagoreanism. But, though Humanism is confessedly a relativism, and as such is a denial of the transcendence of the real and the true, and is conneced to every form of Absolutism (whether is opposed to every form of Absolutism (whether in metaphysics or in epistemology) which ignores or destroys their relation to man, it denies on behalf both of itself and of its forerunners that its relativism is to be identified with scepticism. It holds, on the contrary, that the truth and reality for man which are attainable by man are also

perceived that 'absolute' truth and reality can only be so defined as to be (in fact) unattainable It thus differs from Positivism (q.v.) in being willing to assume the adequacy of human knowledge to human needs and in contenting itself with this, in being critical, rather than dogmatically disdainful, of metaphysics, and, above all, in admitting every hypothesis as worth trying which has a human interest and appeals to any side of human nature. It is this open-mindedness that may bring it into conflict with Naturalism, as it may reconcile it even with Absolutism, in so far as the latter can be exhibited as really containing an answer to genuine human demands. But at present it is in dispute whether any 'absolutist' doctrine of knowledge, truth, and reality can really establish any relation between its ideals and the human

uses of these terms. To Pragmatism (q.v.), Humanism is closely re-

lated. But Pragmatism, though it sends its roots down into a number of sciences, is intrinsically a theory of knowledge, while Humanism is a more general philosophic attitude. William James calls it 'a ferment that has come to stay,' and a 'shifting in the philosophic perspective, making things appear as from a new centre of interest' (Meaning of Truth, p. 121). It may be regarded as a natural and logical development of the Pragmatic method of testing knowledge by its human value, when it is extended beyond the problem of testing truths and applied to the other sciences. For the doctrine that all truths are useful implicitly requires that all truth should be related to human purposes, and that this reference should be traced explicitly throughout all the sciences. If truths are useful, they are valuable for man, and the specific character of this value in every science can be stated. Conversely, in proportion as a science can be viewed in its relation to man, it can be utilized for human purposes. Thus, the discovery of the usefulness of knowledge undermines the 'independence' of the sciences and humanizes them; their claim to absoluteness cannot survive the discovery of their man-made character and of the artilicial and methodological nature of their principles, even when they seem most abstract and unhuman. Humanism, therefore, like Pragmatism, is primarily the name for a method, and not for a system of philosophy; it is more particularly a protest against the dehumanizing of logic which results from assuming that the personal antecedents, context, and purpose of judgments may be abstracted from in considering their cognitive purport. The humanist criticism of logic (see, e.g., the writer's Formal Logic, London, 1912) therefore aims at showing that the attempt to abstract from this human in that the attempt to be traditional logic to side of thinking reduces the traditional logic to mere verbality. The humanist attitude implies also a critical method of estimating the value of the claims to truth put forward by the various systems of metaphysics. This necessarily renders it very destructive to what is called 'metaphysics. For metaphysical systems have usually been put forward dogmatically, with claims resting on self-evident intuitions or an alleged completeness, and with pretensions to absolute and exclusive truth. To their humanist critic, however, no claims are valid merely as such; all must be validated by the value of their consequences. The claim to an exclusive possession of absolute truth he takes to be sufficiently refuted by the existence of conflicting claims and by the historic impossibility of finding any two philosophers whose systems are really in agreement. Hence he infers that metaphysical systems are essentially individual creations and relative to the idiosyncrasies of their authors, and sufficient for man, and that scepticism is the in-evitable outcome of Absolutism so soon as it is for the construction are naturally individual, and

to some extent different in each ease. It follows that it is not so much the right to construct metaphysics that is called in question as the claim to infallibility and the coerciveness for others of any philosopher's personal system. Thus Humanism makes for toleration and abolishes the right to persecute which is implied in the belief in an absolute and immutable truth which is the same for all, but substitutes for this the notion of a common truth which rests upon social agreement and is being continuously elaborated and improved in the growth of human knowledge. The general effect of this, again, is to diminish the philosophic importance of dialectical subtleties which appeal only to a few, and of merely intellectual reasonings as such, and to enhance that of the common-sense notions which have long ago been evolved by man for the guidance of his actions.

for the guidanee of his actions.

Literature.—Historically the philosophic usage of the word 'Humanism' is of very recent origin. It seems first to occur incidentally as a tentative descriptive term equivalent to 'anthropocentrio' and opposed to 'naturalistic' in A. Seth Pringle-Pattison's Man's Place in the Cosmos, London, 1897, p. 61; also in Mind, new ser. ix. [1900] 436 (used by W. Caldwell of Eucken's 'cthicalism') and xi. [1902] 406. The present writer first proposed (in 1903) to appropriate it technically for the more extended forms of Pragmatism, as held by William James and himself and expressed in James's Will to Believe (New York and London, 1896; cf. Preface). He defined it as shove, in conscious opposition also to Absolutism, in the Preface to his Humanism (London, 1003); cf. his Studies in Humanism (do. 1007). This usage was sanctioned by William James in an article on 'The Essence of Humanism' (Journal of Philosophy, 1905, il. 5, reprinted in The Meaning of Truth [London, 1910]) and in his Pragmatism (do. 1907, Lectures vi. and vii.). Cf. also D. L. Murray's Pragmatism, London, 1012, p. 711. The word has heen used, in a too vague sense, merely connoting 'interest in man,' by J. S. Mackenzie in his Lectures on Humanism, London, 1907 (cf. the review in Mind, xvi. 606). It is also used, in religious contexts, by secularists as the opposite of 'supernaturalism,'

F. C. S. SCHILLER.

HUMANISTS.—I. GENERAL.—The transition from the medieval to the modern world seems one of the most abrupt in the pages of history. Certainly it did not take place even in the same eentury in the different lands,—the harvest in Italy was over before the seed was sown in Scotland,—nor did the various fields of human life quicken to the new impulse with a simultaneous response, but the emergence of the new order followed hard on the thrill of expectation. The whole complex movement which wrought the transformation in the outlook of men we call the Renaissance (q.v.). Humanism was the intellectual centre of the movement: in the Humanists we find its conscious pioneers and promoters.

The name 'Humanist' itself indicates the nature

The name 'Humanist' itself indicates the nature of the movement. Just as in the Scottish Universities the term 'Humanity' is still used as a designation for the Latin language and literature, and as in wider circles classical studies in general are summed up as 'the Humanities'—litteræ humanæ, or litteræ humaniores,—so the Humanist is the student of humane letters, the languages and the literatures of Greece and Rome. The work of the Humanists was to disinter the buried classics, to restore a lost means of culture, to recapture an ancient charm of style, and a broader humanity of spirit.

But the change was not so sudden as it seemed. There were signs of the approaching dissolution of Medievalism before the Renaissance proper began.

From the 11th cent. there were traces of the dawn.

A. Bartoli (I Precursori del rinascimento, Florenee, 1877, p. 10f.) would date it from the reaction from terrorism which took place when the year 1000 passed and left the world undestroyed. But both the preceding darkness and the succeeding light have to be exaggerated to make this plausible. There was also a partial revival of learning in the 12th cent., due in great measure to the discovery of works of Aristotle of which all trace had been lost; hut, since Aristotle as understood or misunderstood was one of the cramping forces from which Humanism set men free, it is vain to seek any real connexion. The 13th cent., however, certainly saw precursors of the Renaissance, and men whom we may call, with but little over-estimation of their significance,

'Humanists before Humanism.' In men like Rohert Grosseteste (1175-1253), whose interest in the origins of Christianity led him to give to the world, through the help of others, Latin versions of Greek works then attributed to primitive times, and Roger Bacon (1214-94), who toiled so unwearledly at the 'original tongues,' and who felt so keenly the hianks in the extant writings of the Fathers, we see genuine, though isolated, foregleams of the coming revival. The 13th cent. saw also Universities founded in various countries of Western Europe, particularly in Italy, England, and Spain, hearing witness to a new and widespread zeal for education, a fresh kindling of enthusiasm for things intellectual. But these Universities soon fell into the hands of the dominant Scholasticism, and became strongholds of mediaval tradition.

The Humanist movement proper begins in Italy in the 14th cent., and its first great name is Petrareh. The contrast between the new era and the old is very clearly seen in two interesting passages from the works of Erasmus. In 1518, when the false news of the death of the greatest of the Humanists from the plague at Louvain spread throughout Enrope, the monks of Cologne are said to have rejoieed that he died the death of a heretic 'sine lnx, sine crux, sine Deus.' Here the narrow intensity of the spirit and the barbarity of the language testify to the double pit from which the Humanists sought to deliver Europe. In the preface to his edition of Jerome, Erasmus writes:

Humanists sought to deliver Europe. In the preface to his edition of Jerome, Erasmus writes:

'We kiss the old shoes and dirty handkerehiefs of the saints, and we neglect their hooks, which are the more holy and valuable relics. We look up their shirts and clothes in jewelled cabinets; but as to their writings on which they spent so much pains, and which are still extant for our benefit, we abandon them to mouldiness and vermin.'

The homogre which had been layished on the

them to mouldiness and vermin.'

The homage which had been lavished on the relies of saints ancient and modern was turned by the Humanists into a new channel. Men began to revere the works of the great minds of the ancient world, at times with all the old blind devotion. When Petrarch received the MSS of Homer and Plato from Nicolaus Syocerus of Constantinople, he kissed them, and sighed over them; and, though he had not Greek enough to read them, he deelared that thus to look upon the Greeks was an

The Humanists were one and all scholars, with a great love for learning, and a gennine appreciation of beauty of form and thought, 'with the generous belief,' to use the phrase of Pater (The Renaissance, popular ed., London, 1912, p. 37), 'that nothing which had ever interested the human mind could wholly lose its vitality'—scholars who, despite their manifold differences, were alike in this, that they rebelled against the barrenness and dogmatism of Mediævalism. Into a world where all thought was ordered by the Church, and all secular activity moulded by the Fendal system, there came through them a breath from the distant past, resulting in a re-discovery of the world and of man.

It is only the revolt from Mediavalism as an enclosed and final scheme of thought that concerns us here; the political, social, artistic, and scientific revivals helong to the wider term Renaissance, and the ecclesiastical and religious to the Reformation.

This revolt from Mediævalism was more complete in some circles than in others. The extent of it was the cause of a short but sharp disagreement between two of the most kindred spirits among the Humanists, John Colet and Erasmus. In a conversation on the Schoolmen and their limitations, Erasmus more than once tried to make an exception of Thomas Aquinas, on the ground that he had at least studied the Scriptures and some ancient literature; but Colet would have none of it:

'Why do you extol him to me? If he had not been exceedingly arrogant, he would not with such rashness and such pride have defined everything; and unless his spirit had been somewhat worldly, he would not so have contaminated the whole teaching of Christ with his profane philosophy' (Erasmus, Opera, Leyden, 1703-06, ill. 458).

Further study of Aguinas brought Erasmus

Further study of Aquinas bronght Erasmns round to Colet's way of thinking. But the kind of disagreement which came to sharp expression in

this conversation was more fundamental and more

permanent in other quarters.

The common characteristic of the Humanists is this escape, more or less thorough, from the fetters in which human thought had been confined—an escape into a wider, freer world where all facts were relevant, where all theories had to be tested by relating them to their discoveries, and all formulæ recast in accordance with their new-old light—an escape whose prime cause was the new enthusiasm for the poets, historians, and philosophers of Greece and Rome, the Fathers of the Church, and the Scriptures of the OT and NT in their original tongues, regarded no longer through the distorting medium of allegorical interpretation, but reverently, patiently, and critically studied.

It is when we attempt to find any common char-

acteristic of the wider, freer world into which they escaped that anything like exact definition becomes To some minds, coming into direct impossible. contact for the first time with certain parts of that ancient literature, the most potent thrill was a sense of relief at entering a region where there seemed to be unqualified liberty and no restraining They absorbed with avidity the vices as well as the virtues of Paganism. The Facetiarum Liber of Poggio-a Papal secretary-showed the length to which this tendency might go uncondemned by the Church. The Hermaphroditus of Beccadelli—the extreme example of this type—fortunately met with a different reception. Hailed with delight by many of the Humanists, it was unsparingly denounced by the better sort of Churchmen. To others, Humanism meant chiefly the escape from the arid desert of a fragmentary Aristotle to the fertile fields of l'latonic speculation, and there arose an enthusiasm for Plato and the Neo-l'latonists whose most prominent devotees were Marsiglio Ficino and Pico della Mirandola an enthusiasm which spread from Florence through-out Europe. To still a third group, and it was the most permanently influential, the Fathers of the Church and the New Testament itself gave the first glimpse of religion in an older and purer form, and their energy was directed to a Renaissance or Restitution of Christianity. Erasmus, who de-clared that 'the highest object of the revival of philosophical studies will be to become acquainted with simple and pure Christianity in the Bihle' (quoted in M. Dods, Erasmus and other Essays', London, 1892, p. 24), is the most prominent member of this group. So the Humanist movement, so positive in its discoveries, so enduring in its effects, can be defined only negatively. It was a revolt more or less complete with a new sense of freedom and individuality, a deliverance from bondage into a world of no restraints, but to many of new and high constraints. Every shade of free activity, from one end of the spectrum to the other, from the un-blushing libertinism of the newly emancipated to the reforming zeal of those who had found the highest and final standard, is to be found within the ranks of the Humanists.

II. HUMANISM IN THE VARIOUS COUNTRIES.—Although Humanism had its distinguished representatives over most of Europe, and although the movement in one nation or group of nations naturally affected its neighbours, yet the history of the movement in each nation is so distinct that it will conduce to clearness to take them separately.

1. Italy.—It was natural that the revival of learning should take its rise in Italy, partly because of its proximity to the Eastern Empire, hut mainly on account of its local and lereditary connexion with the glory of the past of Rome. A revival which was patriotic in spirit, antiquarian in its interests, but sporadic in its manifestations, prepared the way for Petrarch.

Francesco Petrarca (1304-74) has been rightly acclaimed as the first of the Humanists. His great predecessor, Dante (1265-1321), is a citizen of two worlds, mediæval and modern; Petrarch is the first true modern. It is noteworthy that the decisive impulse came to him from Cicero, in slavish imitation of whom the Humanism of Italy, almost two centuries later, first showed the fatal symptoms of decay. He loved Cicero from his school-days and read him eagerly, not with a view to advancement in his profession of the law, but because of his delight in his majestic swing and balanced periods. It was the style that fascinated him from the beginning. Another impulse came from the sight of Rome (1336) deserted by the Popes, yet full of monuments eloquent of past grandeur. Cicero and the other neglected Classics were to him the gateway into the understanding of this ruined splendour. So, despite many an early discouragement, he pursued his studies in the literature of Rome. In his correspondence and in most of his writings he used a Latin moulded on the Classics. He was prouder of his Africa and de Viris Illustribus than of the Italian Rime or Canzonicre on which his fame now rests. To seek out MSS, particularly of Cicero, was perhaps his most absorbing pursuit. His letters are his most absorbing pursuit. His letters are full of the delight of discovery and the chagrin of He made an attempt to master Greek. failed because of the early departure of his teacher, and, he confesses, the strangeness of the foreign tongue. But he never ceased to exhort younger men to acquire it. Along these lines lay the activity of the first of the Humanists, and, as J. A. Symonds says (Renaissance in Italy, vol. on 'The Revival of Learning,' new ed., London, 1902, p. 54): 'In this susceptibility to the melodies of rhetorical prose, in this special cult of Cicero, in the passion for collecting manuscripts, and in the intuition that the future of scholarship depended upon the resuscitation of Greek studies, Petrarch initiated the four most important momenta of the classical Renaissance.'

Petrarch's devotion to the Classics led to no breach with the Church. He criticized some of its abuses, though belonging himself to its priesthood, and conspicuously avoiding all ecclesiastical duties. His learning did not tend to Paganism; the ancient culture was to him a handmaid to Christianity. Of the law and philosophy of his day, however, he spoke with open scorn. It was mere empty sophistry, unprofitable mental gyrations. In these things, and in other less admirable respects—in his irritability under criticism, his prodigious appetite for flattery, his overweening desire for personal fame, and his inveterate habit of posing—he foreshadowed the activities and failings of his successors. His labours served to inspire others with similar ideals, and they created the atmosphere necessary for their development.

Giovanni Boccaccio (1313-75), a younger contemporary of Petrarch, was his most distinguished disciple. If Petrarch has the honour of heing the first of the Humanists to Boccaccio belongs that

Giovanni Boccaccio (1313-75), a younger contemporary of Petrarch, was his most distinguished disciple. If Petrarch has the honour of heing the first of the Humanists, to Boccaccio belongs that of being the first to acquire anything like a working knowledge of Greek. His teacher was the pretentious Leontins Pilatus, and the knowledge he acquired was not very profound, but stil it was a beginning. Devoted to Petrarch, he followed his guidance. He had sound ideas about collating MSS, and a genuine reverence for every ancient writing, however unworthy. His main departure from the ideas of his contemporary and master was in his bitter hatred of the monks, as the opponents of learning, and hypocritical pretenders to sanctity. With Boccaccio, Florence becomes the headquarters of the Humanists. The brightest stars in its galaxy were Luigi Marsiglio (1342-94), the soul and leader of the Florentine club of Humanists, which was the true University of the

time; and Coluccio Salutati (1330-1406), the Chancellor of State, whose official letters were copied and treasured for their style. Gian Galeazzo Visconti of Milan declared that one letter of Salutati's could do him more harm by its style than a troop of paid mercenaries.

It was through the Influence of Salutati and his circle, particularly Palia degli Strozzi, that the first competent teacher of Greek was hrought to the West. This was Manuel Chrysoloras, who taught in Florsnee from 1897 to 1400, and until 1415 in other parts of Italy, and whose Erotemata was the earliest Greek grammar of the revival. 'Through seven hundred years,' wrote one of his earliest and most distinguished pupils, Leonardo Bruni (1869-1444), 'no one in all Italy has been master of Greek letters.' 'Chrysoloras of Byzantium . . . brought to us Greek learning.' Among his successors in the teaching of Greek in Italy were George of Trebizond, who taught in Venice and Rome as well as in Florence; Theodorus Gaza, teacher in Ferrara (1441-50) and afterwards in Roms, whose Greek grammar, fulier and more scientific than that of Chrysoloras, Erasmus used in his classee in England; John Argyropoulos, in Florence (1455-71), afterwards in Rome, the teacher of Lorenzo do' Medici, Politian, and Reuchlin; Demetrius Chalcondylas of Rome and Perugia; and John Lascaris who, by his residence In Paris, left his mark on the Humanism of France. Greek learning was therefore not hrought to Italy by scholars fleeing with their precious MSS from Constanthople at the fall of the Eastern Empire; it was during the half century which preceded its fall that, on the scarnest request of the Italians themeleves, the earliest Greek scholars settled In Italy. Vergerius, writing probably in 1404, In his de Ingenuis Moribus, expressed the mind of many: 'It is hard that no slight portion of the history of Rome is to be known only through the laboure of one writing in the Greek language: it is still worse that this sams noble tongue, once well nigh the daily speech of our race, as familiar as the Latin language itself, is on the point of perishing even amongst its own sons, and to ue Italians is already utterly lost, unless we sexcept one or two who in our tims are tardily endeavouring to rescue something—if it be only a mere echo of it—from obli

One other agent in the revival of Greek deserves to be named apart. This was Gemisthos Pletho (1355-1450), whose presence at the Council of Florence in 1438 turned many of the Humanists to the special study of Plato and the Neo-Platonists. Pletho's aim seems to have been to supersede the Christian Church and the religions of the world by a Neo-Platonic Mysticism. Cosimo de' Medici (1389-1464), carried away by his eloquence and his 'indiscriminate erudition,' founded the Florentine Academy and resolved to train up the youthful Marsiglio Ficino (1433-99) to be the expositor of Platonic philosophy to the West. In 1482 appeared Ficino's translation of Plato, and, four years later, that of Plotinus. But his spirit was far different from that of Pletho. There was no far different from that of Pletho. Christian thought in his mind of superseding Christianity. Plato and Christ were colleagues rather than rivals. Whether the practice ascribed to him of keeping two candles burning in his room, one before a bust of Plato, and the other before an image of the Virgin, be true or not, it was certainly a fit symbol of the point of view of his circle. He preached Plato from the pulpit of the Duomo. He did much to revive the study of Plato, but it must be confessed that he was drawn more to his poetic exerescences than to the great fundamental ideas. He was profoundly moved by Savonarola, but it seems to have been only for a time. Savonarola seems to have been only for a time. Savonaries saw too clearly the danger threatened by the whole movement to the uniqueness of revealed religion, and Ficino is recorded later to have lamented his temporary devotion to the 'hypoerite of Ferrara.' More even than Ficino, Giovanni Pico della Mirandola (1463-94) was the object of a constant of the cons hero-worship which extended far beyond the confines of Italy. His theses in favour of Platonism brought him under the ban of the Church, but he was the most profoundly religious of all the disciples of Plato. This, combined with the charm of manner, wealth, generosity and early death of this 'great lord of Italy,' gave him an extra-ordinary influence in Humanist eizcles throughout

Europe. And it was his *Heptaplus*, with its mistaken zeal for the Kabbala, that started Reuchlin on the study of Hebrew.

Reuchlin on the stndy of Hebrew.

This Florentine Academy was only ons of many institutions of the kind. Of the others, the most significant were those of Rome, founded by Julius Pomponius Latus (1425-98) about 1460, antiquarian in its interests, openly pagan in its tone; Naples, founded by Jovianus Pontanus (1420-1503) from the remaining members of the Humanist protégés of Alfonso the Magnanimous, devoting itself mainly to the cultivation of style; and Venice, the latest of all, which centred in the Aldine Press and the founder, Aldus Manutius (1449-1515). Its discussions were conducted in Greek, and its main concerns were the choice of booke to be published and the accuracy of their texts.

their texts.

The great patrons of learning ought not to be passed over without remark. Mention has already heen made of Cosimo de' Medici; but his grandson, Lorenzo the Magnificent (1449-92), was the Mæcenas of an even more brilliant circle. His son again, Giovanni, as Pope Leo x. (from 1613 to 1621), conferred high ecclesiastical office on very unchurchly Humanists. He was not the only Roman Pontiff, however, to chow them favour. Nicholas v. (elected 1447) was the first of them. A Humanist himself of the earlier type, he gathered round him a notable hand of scholars. Under him Rome became a 'workshop of erudition.' Plus m. (1458-64), who as Enca Sylvio had gained no mean reputation as a Humanist, grievously disappointed his expectant friends. Artists, not scholars, won his patronage.

During the whole of the 15th cent. the work of collection was zealously pursued by men like Niccolo Niccoli (1364-1437), who bequeathed 800 MSS to Florence, and Vespasiano da Bisticci (1421-98), multiplier of MSS, bookseller, and biographer of his patrons; libraries had been formed; and in the latter half of the century the Humanism of Italy reached its highest level in Angelo Ambrogini (Politian) (1454-94). Professor of Greek and Latin in Florence, he wrote poetry in three languages, showing an extraordinary fluency in Latin verse. His aim was independence, not imitation, and in his hands Latin had all the flexibility of a living language. His influence was extensive and profound. Somewhat before his time, and somewhat beneath his level of attainment, but with the same aims and ambitions was Francesco Filelfo (1398-1481). These two wore the leading Humanist Professors in the high noon of Humanism.

A marked feature of the Humanist movement in Italy was the number and ferocity of its literary duels. The most the number and ferocity of its literary duels. The most the feature of the literary duels. The most the controversies with Filelfo the Controversies with Filelfo the Controversies with Filelfo the Controversies with Filelfo the Control of Contro

By the end of the 15th cent. the Humanism of Italy had entered on its final stage. In Pietro Bembo (1470-1547) we see the old enthusiasm for letters, but, dominating everything, a conscions aping of the elegancies of Ciceronian diction. With the sack of Rome in 1527 and the compact between Emperor and Pope in 1530, the Italian revival of learning comes to an end. The ago of Spanish tyranny succeeds, and the glowing fire burns low. By the middle of the 16th cent. Greek was disappearing. Even to the erudite Cæsar Baronius (1538-1607) it was an nnknown tongue. But the flame which had been thus kindled and nourished in Italy had already spread to other lands.

2. France.—Though there are early signs of the passage of the New Learning into France, it was long kept in the background through the prestigo of the University of Paris and its Sorbonne. Jean de Montreuil (1354-1418), disciple of Petrarch and correspondent of Salutati, probably deserves the

credit of having led the way. His friend, Nicholas de Clémanges (1367[?]-1437), through diligent reading of the Classics, attained a considerable repute for Ciceronian eloquence. He was influenced purely by the classic style, and not by the classic spirit. To the end he remained a true son of the mediaval Church. There are records of Greek in Paris from 1430; in 1458 came the first recognized teacher; but there can hardly be said to be a Humanist movement until 1494, when the expedition of Charles VIII. to Naples began the closer connexion between France and Italy. The French kings became patrons of learning. John Lascaris from 1495 taught Greek in the University of Paris, and Jerome Aleander (1480–1542) from 1508 added the study of Hebrew. Guillaume Budé (Budæus) (1467–1540), whose dream of the establishment of (1467-1540), whose dream of the establishment of a great Humanist College in Paris by Francis I. took shape in 1530 in the Royal College, was, 'beyond question, the best Greek scholar of his day in Europe' (Cambridge Modern History, i. [1902] 576). Lefevre d'Etaples (Faber Stapulensis) (1455-1536), until 1507 earning distinction as a teacher of the Classics in Paris, then turned his attention to the exegesis and translation of the Condemned by the Sorbonne, he was pro-But the 'group of Meaux' belongs rather to the history of the Reformation. Guillaume Farel (1489-1565), his favourite pupil, connects him with Calvin. Estienne Dolet (1509-46), for six years in Italy during the last stages of Italian Humanism was the champion of Ciceronianism against ism, was the champion of Ciceronianism against Erasmus, and became 'the martyr of the Renais-sance,' being burned to death in Paris on a charge sance, being burned to death in Faris on a charge of heresy. Adrien Turnèbe (Turnebus) (1512-65), professor of Greek and king's printer, did much to advance Greek scholarship; and Julius Cæsar Scaliger (1484[?]-1558), erudite and irascible, rivalled Poggio in virulence of invective, in his attack on Erasmus. The Estiennes, Robert (1503-59) and his son Henri (1528-98), rendered most offsetive service to the Humanist cause by most effective service to the Humanist cause by their numerous classical publications.

The Humanists of France, perhaps more through having felt the general stir of the Renaissance before their attention was turned to the Classics than through any natural predisposition, had little of the blind reverence for all things classical that we find in Italy. Their scholarship was thorough, but more detached and critical. In Joseph Justus

Scaliger (1540-1609) and Isaac Casaubon (1559-1614) it reached its highest level.

3. Germany.—In 1514 there was issued from the press at Tübingen a volume entitled 'Clarorum Virorum Epistolæ, Latinæ, Græcæ et Hebraicæ variis temporibus missæ ad Joannem Reuchlin, in support of Reuchlin in his fight for Hebrew learning. In the same year there appeared an apparent counterblast with the title 'Epistolæ obscurorum virorum ad venerabilem virum M. Ortuinum Gratium variis et locis et temporibus missæ ac demum in volumen coactæ. Gratius was Professor in Cologne, the headquarters of Mediævalism, and in this book he and his class were put to ridicule in a wild parody of their own dog. Latin. Several of the Humanists are known to have had their share in it; and, though frowned on by Renchlin for its coarseness, it did more than anything else to make Humanism a natural movement in Germany, as it had been in Italy, and as it never really became in any other country. Humanism found in Germany a second home.

It had made its appearance long before this. Its way had been prepared by the schools of the Brethren of the Common Life' (q.v.). Schools like Schlettstadt, where Reuchlin began his edn cation, and Deventer, whose most famous master,

Alexander Hegius (1433-99), had Erasmus as a pupil, were far beyond anything in pre-Humanist Italy. It had its forerunners in men like Gregor von Heimburg (1410-72), who were half fascinated and half repelled by the Italian Humanists. Through German students like Peter Luder (1415-74), whom the national Wanderlust drove across the Alps. through the great Councils, where the Humanist secretaries of Italian prelates impressed their German brethren, and through the frequent commercial intercourse, the revival spread. sponding to the Academies of Italy were informal associations in the towns and cities. In Erasmus's account of his German journeys there is frequent reference to reception and escort by the sodalitium or confraternitas — the local group of scholars united in the comradeship of learning. The Humanist Universities were naturally centres of such fraternities. The circle in Erfurt was called the Mutianic host, from Mutianus Rufus (1471-1526), one of the many who had come under the spell of Pico. The centre of the Heidelberg group was Rudolf Agricola (1443–85), 'the first,' Erasmus declared, 'to bring us out of Italy a breath of higher culture.' At Ingolstadt, Johann Eck (1486-1543), who became the opponent of Luther, and Urbanus Rhegius (1489-1541), who became a zealous supporter, were the dominant forces. At Basel, Glareanus (1488-1563) ruled, save during the residence of Erasmus.

But independently of the Universities, the Humanists had their groups in the great cities. At Nüremberg they gathered round Wilibald Pirkheimer (1470-1528), who combined in his own person the versatility of the Italian Renaissance and the more earnest spirit of his own land; at Augsburg round Conrad Peutinger (1465-1547), keeper of the city archives, diplomatist, and antiquarian; at Strassburg, round Jacob Wimpfeling (1450-1528), 'the schoolmaster of Germany,' and Sebastian Brant (1457-1521), satirist and author

of the Narrenschiff.

Three names stand out from all the others in importance and significance. Johann Reuchlin (1455-1522), with attainments in Greek which gave cause for astonishment to Argyropoulos, was the effective promoter of Hebrew studies. Though Conrad Pellicanus (1478–1556) had in 1504 published a creditable Hebrew Grammar, it was Reuchlin's Rudimenta Hebraica that became the foundation of Hebrew scholarship. Attacked as a traitor to the Church for opposing Pfeffer-korn's proposed holocaust of Hebrew books, he was at first acquitted (1514 and 1516) and then condemned on appeal (1520). It was the stand which he made that united the forces of German Hnmanism. Ulrich von Hutten (1488-1523), the son of an impoverished Franconian noble, was designed for the Church, and sent at the age of 11 to the Monastery of Fnlda. Fleeing thence, he studied at one Humanist University after another, crossed into Italy, and lived the life of the wandering scholar. In him we see the New Learning devoted to political and social ends. His great aim was 'a united Germany under a reformed Emperor.' He was drawn into passionate attachment to the Luthern movement by its patriotic ment to the Lutheran movement by its patriotic possibilities. Philip Melanchthon (1497–1560), in virtue of his work on Virgil and Terence, was called at the age of 21 to the chair of Greek at Wittenberg. Amid all his multifarious labours on behalf of the Reformation, he found time and opportunity to foster education and to furnish it himself with

indispensable aids to classical study.

Though there were a few, like Peter Lnder and Conrad Celtes (1459–1509), who may be said to represent the Neo-paganism which was so prominent in Italy, and though most of the older Humanists

refused to join the Reformers when the actual breach came, it was their work that had prepared the way for it, and their pupils gathered round Luther and Zwingli. The main stream of German Humanism had from the beginning been flowing steadily towards Reformation in some

shape or form.

4. England.—Through his kinship of spirit with Petrarch, Chaucer (1340]?]-1400) has been hailed as the morning star of the Renaissance. But his kinship is not with the distinctively Humanist side of Petrarch's activity. Humphry, Duke of Gloucester (1391-1447), patron of scholars, collector, and correspondent of Italian Humanists, did much to hasten the new era. But it is with two friends, Thomas Linacre (1460[?]-1524) and William Grocyn (1446[1]-1519), who had studied in Italy under Politian, and on their return taught Greek in Oxford, that Humanism began really to establish itself in England. John Colet (1467[?]-1519) gave the movement its strongest impulse and its direction. He returned from Italy, well equipped in scholarship, and with a thorough contempt both for the whole scholastic dialectic and for the Neopagan Humanism. In his lectures in Oxford on St. Paul's Epistles he broke fresh ground. 'He was the first to apply the critical methods of the New Learning to discover the exact meaning of the books of the Holy Scriptures' (T. M. Lindsay, A History of the Reformation, Edinburgh, 1906-07, i. 165). In 1510, Colet, now Dean of St. Paul's, devoted his patrimony to the founding of St. Paul's school, where 'children should be taught good literature, both Latin and Greek.' Its first master, William Lily (1466[?]-1522), gave his name to the Latin grammar prepared for the school, and subsequently widely used. In reality it was a composite production. The foundation was Colet's, but it was revised by Erasmus, Lily, and others. Colet's friend, Sir Thomas More (1478-1535), was a hero-worshipper of Pico della Mirandola, whose life, which he translated, showed him the possibility of combining the new culture with a forvent. bility of combining the new culture with a fervent yet uncloistered Christianity. In his Utopia (1516) ho gavo evidence of his open-mindedness to all the hetter influences, not only of Humanism but of the whole Renaissance movement. Among other names worthy of mention are Sir Thomas Smith (1512-77) and Sir John Cheke (1514-57), through whom Greek studies were established in Cambridge; Roger Ascham (1515-68), Greek enthusiast and educational reformer; and William Tyndale (1484[?]-1536), who, from the preparatory school of Erasmus, passed into that of Luther. The Humanism of England produced no prodigies of erudition, but it did produce great popularizers—translators of the Classics whose translations themselves became classics. North's Plutareh and Chapman's Homer are conspicuous examples. Throngh such translations, Humanism profoundly influenced and helped Elizabethan literature. And it must over be remembered that in its springtime the Humanism of England had its own definite ideals to which Erasmis owed more than a little. These ideals find fit expression in the statutes of Colet's school: 'My intent is by this school specially to increase knowledge, and worshipping of God and Our Lord Jesus Christ, and good Christian life and manners' (F. Seebohm, The Oxford Reformers', London, 1869, p. 208 f.).

5. The other countries.—The Now Learning passed to Spain through scholars who had been to Italian through the forement though not the forement though not the forement.

Italy. Of these the foremost, though not the first, was Antonio Lebrixa (1442[1]-1522), who, after

Mæcenas, the Complutensian Polyglot (1522) its outstanding product. The revival, short but brilliant, came to an end, like that of Italy, through the compact between Charles v. and Clement vII. in 1530.

To Scotland the New Learning came late. Passing over earlier students who came under its spell abroad, men like Patrick Hamilton (1504[?] -1528), who helong rather to the Reformation, tho one outstanding name is that of George Buchanan (1506-82). Trained in France and a teacher there, he was one of the leaders in the ill-fated attempt to plant the New Learning in Portugal. His Latin Paraphrases of the Psalms and his other Latin poetry had a tremendous vogne. Joseph Justus Scaliger declared that Latin literature had reached its climax in Buchanan's verse. To Andrew Melville (1545-1622) helongs the credit of re-organizing Scottish University education on Humanist lines.

We have left to the last the greatest of the Humanists, Desiderius Erasmus. Born in Rotterdam in 1466 or 1467, he belongs by birth to the other countries. In spirit he was a true cosmo politan. He is to be found, first in France, then in England, France again, Italy, England again, and finally at Basel. And this list does not include the shorter visits of this born wanderer. He was the friend and correspondent of the contemporary leaders of Humanism in all the countries. He became almost a dictator of learning for Europe north of the Alps, without ever assuming the manner of the despot. In the field of classical studies his Adagia, de Copia Verborum, and Apophthegmata were much prized aids to study. The second went through sixty editions in his life-time. In Greek he was perhaps second to Budeus, but in Latin he had no real rival. Jealous Italians might eall him 'Porrophagus' (in allusion to his fondness for the word porro), but, as his Ciccroni. anus showed, his ideals were not theirs, and his Latin, if not so imitative of Cieero, was a much more flexible and powerful instrument. Works like the Encomium Moriæ and the Colloquia showed the world the necessity of reform. His aim throughout was a Christian Renaissance, tho source of which was not to be found in Plato, but in a return to the New Testament and tho older Fathers of the Church. His Greek Testament of 1516, his numerous editions of the Fathers, and indeed the great bulk of his very namerous works were designed to help in such a Christian Renaissance. In the midst of his labours the Reformation came. Ho died at Basel in 1536, committed to neither party, but amid an admiring circle of friends who were all on the Reformed side.

Though his attempted neutrality in the decisive struggle and certain obvious faults in his character have caused him to be looked upon as a pettyminded man, he did more than any other to extend the infinence of Humanism, and that of the very highest type, thereby earning fairly the name of the greatest of the Humanists. Half-hearted Re-former he may have been, but he was neither half-hearted Hnmanist nor half-hearted Christian.

III. RESULTS .- In dealing with the general results of the Humanist movement thus sketched, tho difficulty is to disentangle it from the Renaissance as a whole. We are apt to ascribe to it influences which, strictly speaking, do not belong to it at all. The defects of the movement are evident—(1) in its tendency to exalt crudition above dent—(1) in its tendency to exameration according intellectual development, and to degenerate into mere pedantry; (2) in its open resuscitation of pagan vices; and (3) in the insincerity induced by a too exclusive devotion to style. Panegyrio and almost in some quarters became fine arts. The ten years in Italy, taught in the Universities of Seville, Salamanca, and Alcalà. The University of Alcalà was the headquarters of Spanish Humanism; Cardinal Ximenes (1436 – 1517) was its

On the other hand, there were many distinct ins. (1) The buried Classics were disinterred and preserved; they were diffused by the printing-press; they were made available by Grammar and Lexicon. (2) Education was set free from narrow Scholastic limits and clerical monopoly. Culture was for the citizen as well as for the 'clerk.' (For men and methods, see EDUCATION, vol. v. p. 1752.) The contact thus established with the great minds of antiquity led to the general revival of thought. The reaction from the fragmentary Aristotle and his mediæval commentators led at first to uncritical enthusiasm for even the wildest vagaries that could be called Platonic or even Neo-Platonic, but later, through controversy and study, to a reasoned understanding of both, thus preparing the way for modern philosophy. (4) Art and literature received a fresh impulse through the abundance of new material of which it did not fail to make extensive use. (5) Acquaintance with the literatures of Greece and Rome led to a rapid evolution of literary forms in the national languages. Most of the Humanists looked with contempt on the unconthness of their vernaculars. Petrarch's preference for his Latin writings, his regret that Dante had not written in Latin, and Hutten's confession that he did not think the German language a fit instrument of literature till he had seen Luther's use of it, are outstanding examples. The futile experiments which almost every European literature witnessed of torturing the vernacular into classical moulds had yet their result in a new variety of form, and a new power over language.
(6) The critical methods of the Humanists swept away such obscurations as the four-fold sense, and, applied by Northern scholars to the Fathers and the Scriptures, gave a great impetus to the Reforma-tion. The broad result is summed up by Jebb:

tion. The broad result is summed up by Jebb:

'The historical importance of the Classical Revival in Italy depends ultimately on the fact that it broadened out into this diffusion of a general capacity for liberal culture, taking various forms under various local and national conditions. That capacity, once restored to the civilised world, became a part of the higher life of the race, an energy which, though it might be temporarily retarded here and there by reactionary forces, could not again be lost. Not in literature or in art alone, but in every form of intellectual activity, the Renaissance opened a new era for mankind' (Cambridge Modern History, i. 584).

in every form of intellectual activity, the Renaissance opened a new ora for mankind' (Cambridge Modern History, i. 584).

HUMANITARIANISM.— Humanitarianism

HUMANITARIANISM. — Humanitarianism in the ethical sense-wholly distinct from the theological-is the deliberate and systematic study of humane principles, the attempt to show that humaneness is an integral part, if not the actual basis, of morals. In estimating the value of compassion as a moral force, it is not necessary to discuss the different theories as to its origin, propounded by the two schools of intuitive and of utili-

tarian ethics, as represented, on the one hand, by Butler, who holds (in his Sermon on 'Compassion [Scrmons, ed. Bernard, London, 1900, p. 74]) that it is an 'original, distinct, particular affection in human nature,' and, on the other hand, by Hobbes, who maintains (Human Nature, ix. 10) that it is 'imagination, or fiction of future calamity to our selves, proceeding from the sense of another man's calamity; for, however this may be, it is evident that compassion is closely allied to that imaginative sympathy by which we identify ourselves with others. In the words of W. Wollaston (Religion of Nature<sup>8</sup>, 1759), 'there is something in human nature, resulting from our very make and constitution, which renders us obnoxious to the pains of others, causes us to sympathise with them, and almost comprehends as in their case. It is grievous to see or hear, and almost to hear of, any man, or even any animal whatever, in torture.'

For example, when a man turns aside to avoid crushing an insect, why does he do so? Certainly not because of any reasoned conviction as to the sufferings of 'the poor beetle that we tread upon, but for the simple fact that, consciously or unconsciously, he is humane; the sight of suffering, how-ever slight, is distasteful to him as being human. Of all mistaken notions concerning humanitarianism, the most mistaken is that which regards it as some extraneous artificial cult, forced on human nature from without; whereas in truth it is founded on an instinctive conviction from within, a very part of human development. When we talk of a man 'becoming a humanitarian,' what we really mean is that he has recognized a fact that was already within his consciousness,—the kinship of all sentient life-of which humanitarianism is the

avowed and definite proclamation.

But, if it be true that compassion is an undeniable fact of human consciousness,' residing 'in human nature itself (Schopenhauer, Basis of Mor., ch. vi.), it is also true that this compassionate instinct, before it can be put to practical service in a complex social state, must be tested by experience and reason. Unmistakable as are our humane promptings, they cannot in all cases be realized; for self-preservation, that other great natural impulse, has first to be consulted, and we are trammelled by a host of traditional customs and obligations which often render it difficult or impossible to give our humanity due effect. Here, again, it is the func-tion of humanitarianism to reconcile the ideal with the actual, to unite compassion with judgment, and to discover not only how we feel, or ought to feel, towards our fellow-beings, but also to what extent and with what limitations we can, at the present time, and under present conditions, put those feelings into practice.

An attempt is sometimes made to disparage humanitarianism by setting it in contrast to humaneness: 'I would be humane,' some one will say, 'but not humanitarian.' But as a matter of fact there is no sort of contradiction between the two terms: for hymanitarianism is nothing more two terms; for humanitarianism is nothing more than conscious and organized humaneness. There than conscious and organized humaneness. There is a vast amount of compassionate sentiment that is at present scattered and isolated, and therefore to a great extent ineffective; it is the business of humanitarianism to collect and focus this feeling

into an energetic whole.

It must be noted, at the outset, that humani-It must be noted, at the outset, that humanitarianism in this sense, as a branch of ethical science, is a modern product, for it was not until the 18th cent.—the age of 'scnsibility'—that there began to be any wide-spread recognition of humaneness as a force in civilized society. No doubt the duty of love and gentleness to sentient life had been inculcated, all down the ages, as part of the higher teaching—in the doctrines of Buddha, in

the system of Pythagoras, in the practice of the Essenes, in the pagan philosophy of Plutarch and Porphyry, and with less consistency, perhaps, so far as our duties towards the lower animals are concerned, in the Christian Scriptures. For, though the gospel of 'peace and goodwill' led its early followers to a belief in the sacredness of all human life and the natural equality of men, and this belief led in its turn to the abolition or curtailment of many crucl practices, such as the gladiatorial shows, there is also truth in the statement (A. Jameson, Commonplace Book of Thoughts, Memories, and Fancies, London, 1854, p. 209) that 'the primitive Christians, by laying so much stress upon a future life in contradistinction to this life, and placing the lower creatures out of the pale of hope, placed them at the same time out of the pale of sympathy, and thins laid the foundation for this utter disregard of animals in the light of our fellow creatures.

It is certain that during the Middle Ages, when the Roman Catholic Church was dominant, there was, in this respect, little or no progress in humanitarian feeling, the indifference of Roman Catholicism to the claims of animals being broken only by the splendid example of St. Francis of Assisi, whose profound sense of brotherhood with beast and bird is the more remarkable owing to its contrast with the general callousness of his contemporaries. was this lack of sympathy which, surviving in large measure even to modern times, caused Buddhists to speak of Christendom as 'the hell of animals.'

When we come to the Renaissance, however, we find, with the revival of learning, a revival also of the humanitarian spirit, many humane sentiments, for example, being observable in the writings of More and Erasmus, Montaigne, Shakespeare, and Bacon; and this renewed appeal to the instinct of compagion panel the way to the instinct of compassion paved the way for that advanced 18th cent sentiment which found its fullest expression in the saying of Voltaire, that 'without humanity, the virtue which comprehends all virtues, the name of philosopher would be little deserved. Philosophers and poets vied with one another, through this era of awakening, in a recognition of the claims of common life on the heart of human kind, and the post-revolutionary writers have continued to develop more and more the ethic of humaneness; it is sufficient to mention such names as those of Thomson, Pope, Goldsmith, Cowper, Burns, Shelley, and Wordsworth, to show how largely our modern poets have been concerned in this humanizing process. It is to the last hundred and fifty years, in fact, that Western humanitarianism, in the sense in which we use the word, owes its origin; and it is of Western humanitarianism only that we here propose to speak.

The first point which needs to be emphasized is this—that the principle of humaneness is based on the broad ground of universal sympathy, not with mankind only, but with all sentient beings, such sympathy being, of course, duly proportioned to the sensibility of its object. Humanitarianism is not to be confused with philanthropy—love of mankind—on the one side, or with zoophily kindness to animals—on the other; [it includes

and comprehends them both.

"It is ahundantly evident, says Lecky (European Morals\*, London, 1883, i. 278, 101), both from history and from present experience, that the instinctive shock, or natural feeling of disgust, caused by the sight of the sufferings of men is not generically different from that which is caused by the sight of the sufferings of animals. . . . At one time the benevolent affections embrace merely the family, soon the circle expanding includes first a class, then a nation, then a coalition of nations, then all humanity, and finally, its influence is felt in the dealings of man with the animal world."

It was its region of the province of an animal world.

Humanitarianism, then, is the application of an evolutionary doctrine founded on the kinship of life, which unites the sentiment of East and West in the growing perception of fellowship and them, can any longer occupy such a position.

brotherhood between all living creatures; and a humanitarian is he who has substituted this wider sympathy for the partial benevolence which is restricted to the narrower circle of one's own countrymen or kin. 'The time will come,' wrote Bentham (Principles of Penal Law, ch. 16), 'when hnmanity will extend its mantle over everything which breathes. We have begun by attending to the condition of slaves; we shall finish by softening that of all the animals which assist our labours or supply our wants.'

But, before we proceed further, it may be well to clear away certain common misapprehensions by a short statement not only of what humanitarianism is, but also of what it is not. For example, it is not Brāhmanism. What it condemns is not the taking of life, as such; but the unnecessary or wanton taking of life through callousness, ignorance, or force of habit; and there is no point whatever in applying to humanitarianism the trite story of the Hindu whose principles forbade him to drink water when the migrogeone had revealed to him the infinitesimal microscope had revealed to him the infinitesimal

creatures that inhabit it.

Nor are humanitarian doctrines, as Nietzsche and his school would have us suppose, an offshoot of Christianity; for, as has already been shown, they go far beyond the Christian ethics in all that relates to the lower animals, and they number among their professors many well-known names that lie altogether outside the Christian sphere of thought. Nor, again, is humanitarianism alto-gether identical with 'altruism,' the due regard for the interests of others, for it is to satisfy his own needs and instincts—involved in those of the sufferer—that the humanitarian takes action; it is self-fulfilment rather than self-sacrifice that he desires.

Finally, humanitarianism is not, as is often assumed by its critics, a merely negative, prohibitive, and ascetic view of life by which we are constrained to desist from certain practices in which we might otherwise take pleasure; on the contrary, by discovering for us a freshness of relation towards vast numbers of our fellow-creatures, it opens out new fields of pleasurable friendship which have hitherto been neglected, and points the way to a fuller and better realization of what is beantiful and true. Contrast, for instance, the wholesale destruction of seafowl for their feathers, or for mere amusement, that disgraces many parts of our coast, with the scene that may be daily witnessed in winter time on the Thames Embankment - the feeding of scores of gulls by their human friends and protectors under terms of perfect amity and trustfulness. Can it be donbted which of these two attitudes towards animals brings the greater pleasure to mankind!

Dismissing, therefore, these false ideas of humanitarianism, we shall try to grasp its true purport and significance as part of the modern democratic movement; for there is no more essential mark of democracy than the fostering of kinship and nnderstanding in place of division and distrust. In holding that the difference between human and In holding that the difference; between iniman and sub-human is one of degree only, and not of kind, the humanitarian has the support not of sentiment alone, but of science. 'The trend of investigation,' says Wesley Mills in his work on The Nature and Development of Animal Intelligence (London, 1898, p. 21), 'thus far goes to show that at least the 1898, p. 21), 'thus far goes we show that at least the germ of every human faculty does exist in some species of animal. . . . Formerly the line was drawn at reason. It was said that the "brutes" cannot reason. Only persons who do not themselves reason about the subject with facts before the subject with the subject with the subject with the subject with the subje

like manner E. P. Evans points out, in his Evolutional Ethics and Animal Psychology (London, 1898, p. 99 f.) that 'man is as truly a part and product of nature as any other animal, and the attempt to set him up as an isolated point outside of it is philo-sophically false and morally pernicious.' Thus the old 'anthropocentric' position is being more and more abandoned, and it is no longer possible to draw an absolute line of demarcation between mcn, as 'persons' and 'ends,' and animals, as mere 'things,' such distinctions being a thoroughly unsound basis for any ethical structure, inasmuch as the more highly organized animals possess, though, of course, in a lower degree, the qualities of true personality. Even the expression 'man and the animals,' though unavoidable in common speech, is philosophically incorrect, for man is himself a part of the great animal kingdom, and cannot disown the relationship. We have from science itself the clearest assurance that man is an animal, and that the great gulf which was supposed to exist between human and non-human has existed only in imagination.

For this reason humanitarianism claims for animals, as for men, a measure of individuality and freedom, a space in which to lead their own lives—in a word, 'rights.' It is unnecessary here to enter into the wide field of discussion as to the fitness of this term; for, if objection be taken to it, it is possible to consider the question from the other, the correlative, side, and to arrive at the same conclusion by the use of the term 'dutics.' The essential part of the humanitarian contention is that there is no absolute difference between mankind and 'the animals'; that, if man has reason, animals have the germ of reason; that, if man has 'rights,' animals have the same in due degree.

With regard to human rights, it is sometimes

This, said that 'men can take care of themselves.' however, is not always the case; for (to refer to two classes only, the pauper and the criminal) it is evident that the unfortunate inmates of workhouse and prison are *not* able to take care of themselves, but are as helpless in the hands of others as any animals could be. The rights of men are admitted in theory, but often violated in practice. We speak of all men as brothers; but, when it comes to giving practical proof of our brotherhood with paupers and criminals, we too frequently show by our treatment of them that we really regard them as a wholly alien class. The same is true of the usage accorded to subject races, aborigines, and all who, in the aggrandizement of one nation at the expense of another, are liable to find themselves at the mercy of their brother man.

protection of Again, when we turn to the animals, we sometimes hear it said that we ought to help men first and animals afterwards. But, if the principle which prompts the humane treatment of men is the same essentially as that which prompts the humane treatment of animals, how can we successfully safeguard it in one direction while we violate it in another? By condoning cruelty to animals, we perpetuate the very spirit which condones cruelty to mcn. Humanitarians do not say that the lower forms of life must be treated in the same way as the higher forms, but that in both cases alike we must be careful to inflict no unnecessary, no avoidable, suffering. This is briefly expressed in the manifesto of the Humanitarian League, which enforces the principle that 'it is iniquitous to inflict avoidable suffering on any sentient being.

Of the societies which work for humane purposes the only one which directly concerns itself with this fuller principle—the just treatment alike of the human and non-human races—is the Humanitarian League, which, while recognizing that there is need of concentration in efforts of this kind, and that it is desirable that special cruelties should be dealt with hy special

organizations, is nevertheless designed to supplement these labours hy showing that all such efforts, however divergent in practice, spring in reality from a common source and converge to a common end—the establishment of concord and fellowship where there is now misunderstanding and strife. How wide a scope there is for humanitarian propaganda, even in this 20th century, may he judged from the number of societies now in existence for the redress of some particular evil—e.g. (to mention hut a few out of many) those that aim at a mitigation of the horrors of war, and the extension of the appeal to international arbitration; those that inculcate a more considerate treatment of subject races and aborigines; and those that plead for the humanizing of the Poor Law, and a less harsh administration of the criminal code and prison system. The societies for the prevention of human wrongs, and the promotion of human happiness, are legion; but it is, of course, impossible to determine precisely which of the many questions thus agitated are to he called 'humanitarian.' The term 'humanitarianism is a wide one, and may he used to cover the whole field of henevolence; but, owing to the action of the Humanitarian League, it is more commonly associated in this country with the reformation of prison treatment and the protest against capital and corporal punishments. Of late years no humanitarian issue has been so largely discussed as the continuance or ahandonment of flogging; which may he taken, perhaps, as a test question hetween humanitarians and their opponents.

Thus, to take a salient example, an attempt was made in the year 1900 to extend the use of the lash for a number of offences in the case of adult criminals, but the Bill was opposed by the Humanitarian League and defeated in the House of Commons hy a large majority; and in like manner the League was instrumental in securing the withdrawal of the 'whipping clauses

Humanitarian League and defeated in the House of Commons hy a large majority; and in like manner the League was instrumental in securing the withdrawal of the 'whipping clauses from the Youthful Offenders' Bill, introduced in the same year. On the other hand, the power of judges to order flogging in the case of certain offences has recently heen increased under the Criminal Law Amendment (White Slave Traffic) Act of 1912. The infliction in the Royal Navy of very severe scourgings on boys and young men up to the age of eighteen is another matter on which humanitarian opinion has of late been powerfully moved, with the result that the use of the birch has been discontinued.

Nor is the list of controversial subjects any shorter where the interests of the lower animals are at stake. In this connexion

Nor is the list of controversial subjects any shorter where the interests of the lower animals are at stake. In this connexion it is necessary to bear in mind the legal distinction between 'domestic' animals and those that are classified, however arbitrarily, as 'wild.' Since the passing of 'Martin's Act' in 1822, a modicum of legal protection has been secured for such animals as are recognized under the title 'domestic,' and to 'cruelly beat, ill-treat, over-drive, abuse, or torture' any such animal is an offence against the law; but there are, of course, innumerable cases which no law can reach, and the general treatment of domestic animals in Great Britain, though far hetter than that which ohtains in some other countries, is still greatly helow the standard to which a civilized nation should aspire. It must be admitted, too, that the protection afforded Is hut partial and incomplete, when we remember that the vivisector, hy special licence, and the cattle-drover and slaughterman, by tolerated custom, are permitted to inflict very severe suffering on highly-organized domestic animals under English law. under English law.

slaughterman, by tolerated custom, are permitted to inflict very severe suffering on highly-organized domestic animals under English law.

In the case of the feræ naturæ—a term which includes even the semi-domesticated park-deer hunted by so-called sportsmen, and the hagged rabbit used in the horrible pastime of rabbit coursing—not even these limited rights exist, the only protection heing that given under the Wild Animals in Captivity Act (1900), which forhids the ill-usage of any 'wild' animal while in actual confinement, but does not take cognizance of any injury done in course of sport, or vivisection, or the destruction of animals for food—a limitation which almost entirely cripples the usefulness of the Act. A wild animal, while in a state of nominal freedom, has no rights. 'Everywhere,' It has been said, 'it is a capital crime to he an unowned creature.

Taking the animal question as a whole, we find that the subjects of paranuoun humanitarian interest are (1) the protection of domestic animals, and (2) the protests raised against vivisection, blood-sports, the slaughter of animals for food, and the wholesale destruction of birds for purposes of millinery—in other words, the enforcement of the present Acts, and the demand for further legislation. The work of the Royal Society for the Protection of Birds, the Humanitarian teague, and others, to agitate against he crueties of the Baboratory, the slaughter-house, the feather-fashion, and sport.' There is no organization which concerns itself especially with bloodsports, except the Sports Department of the Humanitarian League, which was successful in obtaining the abolition of the Royal Buckhounds, and has since promoted a Bill in Parliament for the prohibition of certain spurious sports, such as from traps. It is deserving of notice that there is no matter in which an enlightened public opinion has more signally outrun the letter of the law than that of blood-sports, where there has been no humane legislation since the abolition of bull and bear haiting mor

Given a race of so-called 'brute-beasts' (and it is open to remark that the harshness of the common nomenclature reacts remark that the harshness of the common nomenclature reacts in its turn on the common treatment of animals), which are assumed to exist for the sole object of ministering to human convenience, it is inevitable that they should he used or ill-used in various ways according to the whims and inclinations of their masters. Thus, regarded from the several standpoints of the human temperament—the impulse of hunger, of recreation, of curiosity—an animal is something to eat, something to hunt, something to experiment on; and we are brought face to face with the questions of flesh-eating, sport, and vivisection.

It does not, however, fall within the scope of this article to do more than indicate the general

this article to do more than indicate the general aspects of humanitarianism, and we pass on to speak of some of the common objections that are urged against humanitarian principles. The first and most prevalent of these arguments is that drawn from the poet's picture of 'Nature red in tooth and claw,' which represents humanitarianism as in conflict with the stern facts of existence. It is said that the animals themselves prey on one another, and that the law of nature is founded on internecine conflict and sacrifice. But this, though true in part, is not the whole truth; for, while appealing to the law of competition, it leaves out of sight the not less important law of 'nutual aid,' and evades the fact that, while some animals are mainly predacious, others are mainly social in their habits, and that there is no reason why mankind, whose instincts are of the social order, should violate its own nature in order to imitate the beasts of prey. Nor is it true that an analogy can be established between the suffering inflicted in nature and the artificial and unjustifiable, because unnceessary, cruelties of man; for the best naturalists are of opinion that

"" Nature red in tooth and claw With ravine"

is a picture the evil of which is read into it by our imaginations, the reality being made up of full and happy lives, usually terminated by the quickest and least painful of deaths' (A. R. Wallace, Darwinism, London, 1889, p. 40). All these conditions of the condition of the conditions of the condi Darwinism, London, 1889, p. 40). All these conditions are wanting in the unnatural cruelties against

which humanitarianism protests.

Then, again, we are confronted with the argument drawn from that much misapprehended term, 'consistency.' 'Where will you draw the line?' is a question frequently put to the humanitarian, who is reminded that, if he be 'consistent,' he will be precluded from defending his crops against the ravages of wild animals, and even from cultivating the ground, because of the injury done by the plough to earth-worms and to the lowliest forms of lifo. But here there is, of course, a complete perversion of the humanitarian doctrine, which, as has already been stated, asserts that rights are the same in kind but not in degree, and that we owe to all sentient creatures a universal, but not an absolute, justice. We are not bound to starve our own race by abstaining from agriculture on account of the injury done to earth-worms, but we may all remember what Cowper (The Task, bk. vi.) says of the man 'who needlessly sets foot upon a werm.' The true consistency is that which has regard to the direction of one's course; and, because the whole journey cannot be accomplished at once, it does not follow that no step should be taken.

Equally pointless is the cry that is raised against be 'sentimentality' of humanitarians, 'sentiment' being one of those vague, indefinite terms which are used as a substitute for argument. That there is much that is ultra-sentimental in the present age—as, for instance, in its spasmodic and partial benevolence and ill-adjusted 'charitics' -will not be denied; nor are humanitarians more exempt than other persons from the danger of falling into excess in the advocacy of their views. But, though the charge of sentimentality may be

while denouncing the cruel experiments of physiologists, is himself an advocate of vivisecting convicts with the cat-o'-nine-tails, it cannot lie against the all-round humanitarian who pleads for the adoption of some rational and comprchensive principle. It is, in fact, not on mere sentimentality, but on a wider and more philosophic view of the subject, that humanitarianism relies. 'As of the subject, that humanitarianism relies. long,' it has been said, 'as certain favoured aspects of humaneness are exclusively insisted on, as long as pity is felt and expressed for this or that particular form of human suffering, while others of equal or greater importance are neglected or ridiculed; as long as the compassion which is claimed for men is denied to animals, or extended only to certain classes of animals—so long will it be diffi-cult to appeal successfully from the narrow selfishness of personal interests to the higher and nobler

sentiment of universal brotherhood.

Perhaps no more effective proof can be produced of the inevitable further growth of humanitarian principles than a consideration of the alternative that must be faced by society if humanitarianism is to be disowned. Whether wisely or unwisely, we have now reached a certain transitional stage of humane dovelopment, both in our manners and in our laws, and those who would dissuade us from continued advance on the samo lines are bound to frame some other policy for our guidance. If we are not to go forward, are we to turn back? Or are we to remain at the precise point to which we have now attained? It will hardly be argued that the present very confused state of English law and feeling on humanitarian subjects represents the golden mean which is incapable of further improvement; it follows, then, that, if progress is to be barred, we must henceforth return to that 'old brutality' which certain writers affect to regret that we have 'allowed to dio out too much.' To state this alternative is sufficient to show that the future lies with humanitarianism. It is obvions that we shall continue to advance in the same direction as in the past, and that a gradually expanding sense of sympathy and kinship will bring with it a gradual but certain increase in the humanity of the treatment which we shall accord to every living creature.

Herein, then, lies the strength of the humanitarian position, that its principle is a consolidation of the countless humane impulses that spring up everywhere in the human heart, and that on an instinct so simple as to be intelligible to a child it builds a progressive ethical system that can satisfy the intellect of a philosopher. It is an amusing comment on the prevalent ignorance of humanitarianism that those who hold a faith which so profound a thinker as Schopenhaner cherished as 'the basis of morals' are often lightly dismissed with the remark that 'their hearts are better than their heads.' It is impossible, with strict regard to truth, to return this compliment by saying that the hoads of such foolish jesters are better than their hearts, for head and heart alike must be in an evil case when the great duty of compassion does not make itself respected. We have advisedly spoken of this principle as a 'faith,' for it is indeed the ethical belief of the future—the faith of universal kinship-and no infidelity can be so grievous as that which hinders men from recognizing their own kindred, and makes them deny that oneness in life which wisdom sees everywhere, and to which folly is everywhere blind. Far as custom has carried man from man, says Edward Car-penter (Civilization, London, 1889, p. 156), 'yet, when at last in the ever-branching series the complete human being is produced, it knows at once its kinship with all the other forms. More, fairly urged, e.g. against the anti-vivisector who, it knows its kinship with the animals. It sees

that it is only habit, an illusion of difference, that divides; and it perceives after all that it is the same human creature that flies in the air, and swims in the sea, or walks biped upon the land.

By no surer course can we attain to that 'natural piety' of which poets have sung than by the study and practice of this humane belief—which

is humanitarianism.

LITERATURE.—The reader is referred to the following works for a fuller statement of some of the points touched on in the

foregoing article; but it should be noted that, while there are many books dealing with certain aspects of humanitarianism, there are very few that treat of the subject as a whole.

Jeremy Bentham, Introduction to the Principles of Morals and Legislation, London, 1789; W. E. H. Lecky, History of European Alorals, do. 1883; Arthur Schopenhauer, The Basis of Morality, tr. A. B. Bullock, do. 1903; Howard Williams, The Ethics of Diet, do. 1907; E. Westermarck, MI, ch. xliv.; Publications of the Humanitarian League, London, Including J. Howard Moore, The Universal Kinship, 1906, and Henry S. Salt, Animals' Rights considered in relation to Social Progress, 1905.

## HUMAN SACRIFICE.

Introductory and Primitive (A. E. CRAWLEY), Arabian.—See 'Semitic.' Babylonian.—See 'Semitic.'
Celtic.—See COMMUNION WITH DEITY (Celtic),
and ETHICS AND MORALITY (Celtic). Chinese (J. DYER BALL), p. 845. Egyptian.—See 'Semitic.' Greek (A. C. PEARSON), p. 847.

HUMAN SACRIFICE (Introductory and Primitive).—There are few races and few religions which can show a history free from the stain of human sacrifice. But, when the practice is examined without prejudice (though few practices have caused greater moral detestation), it will be found that such phrases as 'stain' are metaphors not always descried, and that technically the term 'sacrifice' itself is rarely appropriate. The practice, or custom, or rite has extensive adhesions and numerous applications; its meaning in any particular instance is not always easy to disclose; but its very seriousness makes an analysis of it deeply instructive for the study of social psycho-

The fascination which human sacrifice has excreised over various peoples at a relatively high stage of culture at once suggests that it must be a social reaction to some deep-seated social senti-ment. The subject, as Westermarck's analysis shows, cannot be treated any longer as a mere antiquarian horror. On the contrary, it goes to the very heart of the permanent principles of social life and organization. Scientific ethics has to admit that the causes which produced human sacrifice still exist, and that they produce results identical in substance, though differing in name. Yet even here popular language preserves the ancient name in metaphor, when it speaks of one man being 'sacrificed' for others, or of a hero 'sacrificing' his life to save many. The modern consciousness reverts to the form of the primitive by omitting as a rule the 'middle age' metaby omitting, as a rule, the 'middle age' meta-physical terminus ad quem, as expressed by the word 'to.' But it shows a true insight in affixing to the preposition varions social emotions and pre-judices which may have ultimately inspired the sacrifice,' such as fear, vanity, lust, or shame.

It is hardly necessary to examine, or to revise, the current theory of sacrifice (q, v, ) in general, for human sacrifice is only incidentally a sacrifice proper; that is, its essence is not, as a rule, either a gift or a communion. The practice, again, however 'brutal,' is hardly developed among the lower races. It is only when a relatively high culture has been achieved, with its resulting sense of power, that the practice grows. As Westermarck says. marck says,

the practice of human sacrifice cannot be regarded as a characteristic of savage races. On the contrary, it is found much more frequently among barbarians and semi-civilized peoples than among genuine savages, and at the lowest stages of culture known to us it is hardly heard of. 1

For instance, it was known in ancient India, 1 MI I. 436f.

Hebrew.—See 'Semitic.' Indian (E. A. GAIT), p. 849. Iranian (E. EDWARDS), p. 853. Japanese and Korean (M. REVON), p. 855. Persian.—See 'Iranian.' Roman (R. WÜNSCH), p. 858. Semitic (R. A. S. MACALISTER), p. 862. Slavic (L. LEGER), p. 865. Teutonic (E. Mock), p. 865.

Greece, and Italy, among the Celts, Tentons, and Slavs, the Semites and Egyptians, the early Japanese, many African tribes, South Sea Islanders, some American tribes, and particularly the Mayas and Aztecs. Further, it was rarer in Vedic than in Brāhmanic India. Among the Africans it has been observed that 'the more powerful the nation the grander the sacrifice.' The Aztecs themselves did not adopt the practice until the 14th cent., two hundred years before the conquest; the sacri-fices 'rare at first, became more frequent with the wider extent of their empire; till, at length, almost every festival was closed with this cruel abomination.'3

From the legal point of view every human sacrifice is a ceremonial murder. As such, cases which are technically sacrifices cannot be treated differently from those which are not. The tendency, not only in historical writing but in the thought and language of contemporary periods, is to class all ceremonial murder as sacrifice. Alother qualification of human sacrifice is that, like the majority of all sacrificial acts, it is generally a collective undertaking; when an individual executes it, he is, as a rule, the representative of the community or at least of a class within it. This fact serves to throw into relief the close connexion that is maintained from the activate to the least of the connexion. that is maintained from the earliest to the latest instances between human sacrifice and the retri-butive functions of the community. Capital punishment in its simplest and most primitive form is a more or less unconscions act of social revenge. The essence of all punishment is the satisfaction of resentment. The principle of talio is the result of the organization of this fundamental moral impulse. But before it is organized, and even in civilization on occasions when the and even in civilization on occasions when the crowd is master, and justice yields to mob-law or lynch-law, the passion of resentment is rarely satisfied by any atonement save that of death. There is such a phenomenon as a collective lnst for blood, and, sociologically speaking, we have a right to class together the behaviour of the Commune in the Revolution of 1789, and of the Aztecs in their systematized orgies of human sacrifice. in their systematized orgies of human sacrifice. Cases like these show moral resentment as a perversion, but there seems to be little distinction between them and the cases of primitive social Lastly, it was to be expected, and is revenge.

1843, i. 65.

proved by the facts, that the history of society up to quite recent times is characterized by a special sense of collective responsibility. The belief that national or tribal distress or failure. national or tribal sin is very real. It is a question whether the source of this powerful idea is to be found in the sum of individual selfish or selfregarding impulses, the sum of individual desires to shirk individual responsibilities, or in the mutual imitation of elementary instincts of co-operation. However that may be, the whole history of human sacrifice is linked together by ideas of vicarious suffering, substitution, and representation, no less than by its form of collective murder. Throughout, we realize the extensive and normal application of the hiologico-social law that the individual is inferior to the race, and, as against the race or community, has no rights; 'it is expedient that one man should die for the people' (Jn 1150).

In that stage of culture when all social organization is religious, justice and worship are apt to be confused. Some cases, however, still show collec-tive retribution. Von Kotzebne with great insight observes of the Sandwich Islanders that they 'sacrifice eulprits to their gods, as we sacrifice them in Europe to justice.' The ancient Romans are said to have put corn-thieves to death, as a sacrifice to Ceres. Among the Hebrews the ban, or hērem, was placed upon malefactors as enemies of Jahweh. It was

of Janwen. It was 'properly dedication to Jahveh... The persons who were 'dedicated,' generally hy a solemn vow, to Jahveh, were put to death, frequently hy fire, whereby the resemblance to an ordinary hurnt-offering was rendered still more apparent; their dwellings and property were also consumed by fire; titelr lands were left uncultivated for ever.' 'Such punishments were very common in the ancient world. But in Israel, as elsewhere, they were at the same time religious acts.' They have a constitute of conductions.

For the human sacrifices annually offered to Baal in Rhodes, eriminals took the place of the innocent victims who were previously sacrificed. Here, no doubt, as Frazer notes, there is an actual substitution of individuals who are worthless, and therefore suitable for destruction. Such cases may thus be accidental revivals, as it were, of an original punishment of offenders, an organized

cultus having intervened.

The Mexicans included among the victims for their systematized human sacrifices criminals 'who were condemned to expiate their crimes by the sacrifice of their lives. In Tahiti the victims were 'either captives taken in war, or individuals who had rendered themselves obnoxious to the chiefs or the priests.'5 Conversely, the Mexicans seem to have given all capital punishment the form of a sacrifice to their gods. This at least is stated in connexion with the punishment of sorcerers whose practices were injurious to the community or individuals.

Westermarck recognizes the persistence of penal

sacrifico:

\*There is one form of human sacrifics which has ontlived all others, namely, the penal sacrifice of offenders. . . . This kind of human sacrifice is even found where the offering of animals or lifeless things has fallen out of nae or become a mere symbol. For this is the only sacrifice which is intended to propitiate the deity hy the mere death of the victim; and gods are helieved to be capable of feeling anger and revenge long after they have ceased to have material needs. The last trace of human sacrifice has disappeared only when men no ionger punish effenders capitally with a view to appearing resentful gods. This form of human secrifice it has already been

This form of human sacrifice, it has already been 1 O. von Kotzebue, Voyage of Discovery, Eng. tr., London, 1821, 1il. 248; cf. F. Granger, Worship of the Romans, do. 1895, p. 260.

suggested, is on the normal lines of the evolution of the custom, and is the final development of the original inception of the social habit. It is not sacrifice, except in a large metaphorical sense. One might urge that, even after the administration of justice has become altogether separated from religion, there is no break of continuity-that in effect a new religion shows itself in the interval, and that capital punishment, or any punishment, is still a sacrifice to justice. The difference is that no superstitious ideas cluster round the destrnetion of the criminal life, and that the justice thus satisfied is not a personalized power. Westermarck's statement lays stress on the death of the victim as propitiating the deity. The deity thus being the personification of the moral feelings of the community repeats the moral, retributive impulses of the community. He requires not a sacrifice, but a just penalty. Westermarck notes that 'there can be no moral scruples in regard to a rite which involves a punishment regarded as just.' But it would be a mistake to accuse of moral seruples the early offerers of any form of human sacrifice. All religions acts, however horrible, are ex hypothesi sincere, and therefore untouched by moral scruple. Pity and tenderness may, of course, attempt to inhibit the impulse, but this, being identical with the feeling of duty, is selfsufficient, whether in the individual or in the

community. The penal aspect of human sacrifice has been emphasized by the fact that semi-eivilized and even civilized societies have, for various reasons, been in the habit of practising 'a severity which far surpasses the rigour of the lex talionis.'2 Till quite recent times the penalty of death was prescribed for the majority of offences in all civilized com-munities. There can be no doubt that the spectacle of capital punishment offered to the public in England, for example, till the last century, satisfied the same instincts as did the gladiatorial games of Rome and the sacrificial massacres of Mexico. This severity is connected with despotism or religion. In either case, acts which may arouse the anger of semi-divine or divine beings are punished with more severity, because the community fears that the divine wrath may be turned against itself. This has actually been made an argument for applying the death-penalty to all offences. Thus, the Peruvians held that 'a culprit was not punished for the delinquencies he had committed, but for having broken the commandment of the Ynca, who was respected as God, and that, therefore, the slightest offence deserved death. Every erime, in Hebrew theory, involves a breach of God's law, and no punishment is too severe for the ungodly. These ideas were adopted by the

the ungodly. 'These ideas were adopted by the Christian Church and by Christian governments.'?

A link between the conception of the god and his offended holiness and the penal aspect of human sacrifice may be found in the reason given for the sacrifice of criminals—that they are already hateful to the god. Any such convenient inferior persons may, again, almost suggest the principle of preventive sacrifice or penalty. On the Slave

'the object of human sacrifice seems to be to gratify or satiate the malignity of the gods at the expense of chosen individuals, instead of leaving it to chance—the victims are, in fact, slain for the henefit of the community at large.'9

A considerable proportion of cases may be regarded as founded on a nervous collective 'sense Coast

of sin,' which should perhaps be explained as the sense of responsibility in the making. These form 1 M 1. 471. 2 1b. 1. 180 ... 180 ff.

the central feature in the panorama of human sacrifice, and therefore require illustration.

The Chippewas, suffering from an epidemic, regarded it as a divine punishment for their wickedness. The most beautiful girl of the tribe was set adrift in the river and allowed to drown, as a means of staying the plague.1 Similarly the

Beotians sacrificed a boy to stay a pestilence.<sup>2</sup>
Referring to the Hebrews, Philo of Byblus says:

'It was the custom among the ancients, in cases of great danger, that the rulers of a city or a nation, in order to avert universal destruction, should give the dearest of their children to be killed as a ransom offered to averging demons.<sup>2</sup>

In the Niger country, a young woman is sacrificed to take away the iniquities of the land. As her body is dragged along 'in a merciless manner, as if the weight of all their wickedness were thus carried away,' the people cry, 'Wickedness! wickedness!' She is drowned in the river. Another account speaks of two sacrifices, one for the land, the other for the river.

'Thus two human beings were offered as sacriflees, to propitiate their heathen deities, thinking that they would thus atone for the individual sins of those who had broken God's laws during the past year. . . Those who had fallen into gross sins during the past year—such as incendiarisms, thefis, fornications, adulteries, witchcrafts, incests, slanders, etc.—were expected to pay in twenty-eight ngugas, or £2, 0s. 7½d., as a fine; and this money was taken into the interior, to purchase two sickly persons, to he offered as a sacrifice for all these abominable crimes.'

The Chukchi in 1814 sacrificed a respected chief to stay an epidemic which was destroying both men and reindeer. The sacrifice of every living creature born in the following spring, which constituted the ancient Italian rite of the Ver Sacrum, was performed in times of peril or pestilence. Human sacrifice in cases of drought and famine is frequent.8 When unseasonable weather threatened the crops, the Peruvians sacrificed children. The people of Great Benin, in case of excessive rain, asked the king

to make juju, and sacrifice to stop the rain. Accordingly a woman was taken, a prayer made over her, and a message saluting the Rain God put in her mouth; then she was clubbed to death and put up in the execution tree so that the rain night see. In the same way, if there is too much sun, so that there is a danger of the crops spoiling, Overam! [the king] can sacrifice to the Sun God. 10

This instance is instructive. It includes a plain connexion with the penal aspect of sacrifice, and also the later notion that the slain person acts as a messenger to the god. The possibility of using sacrifice, not merely as an expiation, but as an expiation in advance—in other words, as a preventive—is also suggested. How such rites may resily become positive is well shown by another easily become positive is well shown by another case from Great Benin. Sir Richard Burton saw a

young woman
'lashed to a scaffolding upon the summit of a tall blasted tres, and being devoured by the turkey-buzzards. The peopls declared it to hs a "fetish," or charm for bringing rain. 11

Such agricultural sacrifices are common enough;12 they tend to become annual and seasonal. Westermarck shows good reason for supposing that the victim is by no means always regarded as a representative of the corn-spirit, as is argued in Frazer's hypothesis. 18

Ancient Greeks, Gauls, Semites, and Hindus sacrificed human beings in war, either to guard against ill-success or to propitiate the divine being 1 R. Dorman, Primitive Superstitions, Philadelphia, 1881,

who had brought it about.1 How far the principle may be carried is illustrated by the Carthaginian sacrifice of two hundred children, when the city was in the last stage of siege.

The transition from the idea of securing the lives of the community by sacrificing the life of one man to the idea of propitiating a malignant supernatural power is naturally easy in such circumstances. people of Jaipur propitiated their god of battle by

uman sacrifice.

'On the eve of a hattle, or when a new fort or even an important villags is to he built, or when danger of any kind is to be averted, this sanguinary heing must be propitiated with human blood.'?

Sacrifice after victory may, when the ideas of sacrifice proper have fully coloured the rite, be regarded as a thank-offering. But revenge on the enemy, the fulfilment of a vow (itself connected with the impulse of recent part) with the impulse of resentment), or, further, propitiation, may in many cases inspire the custom.

An important feature of this vicarious atonement, whether expiatory or preventive, is that the victim is not chosen at random. He may be a worthless person, a criminal or outcast, diseased, a slave, or a young child; he may also be the choicest of youth, or even the king of the people. The precise character of the person slain generally qualifies the meaning of the rite; a child, for instance, may be a substitute for his father; a king for his people; a criminal, similarly, represents the guilty soul of the community. Westermarck the guilty soul of the community. has rightly argued that the victim

'is a representative of the community which has incurred the anger of the god, and is accepted as a substitute on the principle of social solidarity.'

The atonement of Christ is conceived of as a

The atonement of Christ is conceived of as a sacrifice, and His personality as fully representative.

'According to the Western Church, Christ discharged the punishment due to the sins of mankind, and propitiated the justice of his Father, in his capacity of a man, as a representative of the human race; whereas in the East, where it was maintained that the deity suffered (though he suffered through the human nature which he had made his own), the idea of substitution could hardly take root, since, as Harnack (Hist. of Dogma, iii, 312 f.) remarks, "the dying God-man really represented no ons." The Greek Church regarded the death of Christ as a ransom for mankind paid to the devil, and this doctrins was also accepted by the most important of the Western Fathers, although it flatly contradicted their own theory of atonement."

'When men offer the lives of their fellow-men in sacrifice to

attnough it native contradicted their own theory of atonement. b

'When men offer the lives of their fellow-men in sacrifice to their gods, they do so, as a rule, in the hopes of thereby saving their own. Human sacrifice is essentially a method of life-insurance—absurd, no doubt, according to our ideas, but not an act of wanton eruelty. When practised for the benefit of the community, or in a case of national distress, it is hardly more eruel than to advocate the infliction of capital punishment on the ground of social expediency, or to compel thousands of men to suffer death on the battle-field on behalf of their country. This custom of human sacrifies admits that the life of one is taken to save the lives of many, or that an inferior individual is put to death for the purpose of preventing the death of somebody who has a higher right to live. Sometimes the king or chief is sacrifieed in times of scarcity or pestilence, but then he is probably held personally responsible for the calamity. Very frequently the victims are prisoners of war or other allens, or slaves, or criminals, that is, persons whose lives are held in little regard. And in many cases these are the only victims allowed by custom.' 

The execution of heretics, as such, is a culmina-

The execution of heretics, as such, is a culmination of the social principle that the Godhead is deeply interested in the loyalty of the believing people. The auto da  $f\dot{e}$  is a true human sacrifice of the penal species; it might readily take on the character of sacrifice proper, as it probably has done in the analogous cases of Hebrew extermination of the heathen and Muhammadan destruction of unbelievers, though in Europe this character has not been emphasized.

When the principle that the death of one may save the lives of the community has become part of

the popular creed, voluntary sacrifice may be undertaken. Ancient Rome owed victories in battle to the devotio of heroes, such as Decius Mus. devotional suicide was a religious act, and had a prescribed ritual. The harakiri of the Japanese is certainly a sacrifice; when committed at the funeral of a Mikado or of any dead person it is of the nature of an offering to the soul of the dead, in that form which ensures that the dead shall have companions and attendants. The Chukchi and Samoyeds are curiously addicted to suicide; in fact, there is a suicidal belt across Northern Asia, including the Japanese. The Samoyed holds that the act is in itself 'pleasing to God, who looks upon it as a voluntary sacrifice, which deserves reward. The Chukchi sacrifice their own lives in times of national danger or epidemic. The satī of Hindu widows on the pyres of their dead husbands is repeated elsewhere, as in Uganda, the East Indies, Fiji, and the New Hehrides.<sup>2</sup> Such sacrifice is analogous to acts of asceticism, and, like these, is often connected with the desire for betterment in the world beyond the grave.

Human sacrifice was performed, also, to save the life of some particular individual. The Guatemalans resorted to it when all other means of euring a sick person failed. To-day in Morocco, if a child dies, the custom is to congratulate the parents—'Your child took away your misfortune.' The practice of sacrificing the first-born child seems to have been an article of ancient Semitic religion; the origin of the Passover is most probably to be traced to it. The practice is found, more or less systematized, in Australia, China, America, Africa, and Russia. Infanticide, at a stage of culture when all social custom is religious, naturally assumes the character of a 'sacrifice.' There may be various motives for the act, but only cases where there is a real substitution for the life of another person can be included under human sacrifice. Substitutional sacrifice for individual benefit occurs in Central America, Peru, Tonga, Tahiti, the Philippines, India, the Dayak conntries, West Africa, and Scandinavia. It was frequent in ancient Italy, and both Nero and Hadrian were beneficiaries of the rite.7

There is a curious practice, connected with the doctrine of the soul, of sacrificing an individual, generally a child, to remove barrenness from women. As Westermarck explains it, the failure to bear children 'is attributed to some god keeping back the children which would otherwise be born in the due course of nature.' The victim is a snbstitute.<sup>8</sup>

Certain cases of child-sacrifice seem to suggest that the child, being in a sense a duplicate of the father, places the life of the father in danger.9

When the idea is arrived at that the person sacrificed is a gift to the deity, we are in the sphere of sacrifice proper. But this is clearly later than the penal conception and even the substitutional conception of the rite. The gods of the Gold Coast require attendants:

'The ghosts of the human victims sacrificed to them are be lieved to pass at once into a condition of ghostly servitude to them, just as those sacrificed at the funerals of chiefs are believed to pass into a ghostly attendance. 10

The belief is rare, but, as applied to the service

of the dead, is frequent. The type of it is the Hindu satī. Men require both wives and servants in the other world. India, probably even in Vedic times, and Central America are the chief areas of the practice of immolating wives and slaves or friends for the dead, but it is found all over the world.1 Blood-revenge in many cases in really a human sacrifice to the spirit of the murdered man.<sup>2</sup> The completed revenge is frequently believed also to safeguard the avenger from the malignancy of the unaverged dead. Such ideas are merely superimposed upon a practice originally inspired by the impulse of resentment.

Other ideas, probably later than the institution of the rite, are the conception that the man sacrificed is a messenger to the gods; and that he becomes, when sacrificed at or in a new building, a protecting demon of the place. Prohably the original intention was to protect the living from the risks incurred by occupying a site belonging to supernatural powers. This is seen in the case of sacrifices made at the building of bridges (q.v.). Human sacrifices to the powers of water, sea- or river-demons, are common enough, and folklore is full of stories of them.8

Cannibalism (q.v.) is probably not to be regarded, as Letourneau regards it, as the original sin of mankind.

'The cannibalism of modern savages,' Westermarck concludes, is not 'a survival from the first infancy of mankind,' nor is it representative of 'a stage through which the whole human race has passed.'4

But there can be little doubt that primitive peoples, like barbarons and even civilized peoples on occasion, practised cannibalism as an infrequent habit. Now, according to one theory of sacrifice, the essence of this central act of worship is the provision of a common meal for the god and his worshippers. A priori there is every reason to expect that the idea of cannibalism should be found in many cases of human sacrifice. The Central Americans, especially the Mexicans, offered the blood and the heart of the victim to the god. The priest cut open the breast, and tore out the heart. This was 'waved' as an offering to the Sun; frequently it was placed with a golden spoon in the mouth of the image. The Iroqnois, the Khonds and Ooryahs of India, the Fijians, and peoples of the Gold Coast, had similar ritual and belief. Cannibal meals, which possess a magical or religious character, satisfy the above definition of sacrifice, if the victim is slain for the purpose. The most inveterate followers of the cult of human sacrifice, as it may truly he called in this case—the Mexicans—ate portions of the human victims slain on their altars. The Mayas, Nicaraguans, and Peruvians did the same. Nigeria, human sacrifice offered to appease the gods, or to avert misfortune, is not considered to be complete unless either the priests or the people eat the bodics of the victims. In some parts the flesh is distributed among the entire population.7 The practice is found in the Solomon Islands, Hawaii, and ancient India, always in connexion with a sacrifice. Two species of cannibalism are distinguished in Western Africa, the one a luxury, gourniandise, the other sacrificial, and in the latter the priests are the chief partakers.6

'The sacrificial form of cannibalism,' says Westermarck, obviously springs from the idea that a victim offered to a supernatural heing participates in his sanctity and from the wish of the worshipper to transfer to himself something of its benign virtue. So also the divine qualities of a man-god are supposed to he assimilated by the person who cats his flesh or drinks his blood. This was the idea of the early Christians concerning the Eucharist.' I Similarly, the eating of human flesh is in various

Similarly, the eating of human flesh is in various cases supposed to have a magical and supernatural effect. The circle of these ideas is completed by the remarkable belief, found in the majority of races, that the flesh and blood of executed offenders have magical power. The mere fact of a violent death, when imposed on a victim by corporate action is always improved. action, is always impressive. It is possible that we have here the psychological explanation of the magical virtues with which such human sacrifices are credited. They are the sign and seal of the sacred force of the community in action.

Westermarck finds, in criticism of Frazer's hypothesis, 'no instance of an expiatory sacrifice being connected with a ceremony of sin-transference.' The meriah sacrifice of the Khonds is a notable example of human sacrifice. meaning is interpreted by Frazer to be that the victim was a representative of the corn-spirit and was sacrificed in order to ensure good crops, on the principle chiefly of the resurrection of the spirit.<sup>5</sup> The interpretation involves the assumption that the view of the meriah as a victim offered to deity, the Earth-goddess, Tari Pennu, is a late sophistication. Macpherson notes that the meriah was sacrificed

'upon the occurrence of an extraordinary number of deaths hy disease; or should very many die in childhirth; or should the flocks or herds suffer largely from disease, or from wild beasts; or should the greater crops threaten to fail'; also whenever any calamity occurred to the chiefs or their families. From this and other evidence, Westermarck concludes that the theory of substitution accounts fully for the rite, and that the hypothesis of the identification with the cornespirit is arbitrary.

identification with the corn-spirit is arbitrary. See, further, the 'Indian' article, § 4.

Magical efficacy is universally attributed to human blood, probably because it is human, that is, the blood of the lord of creation, who, as such, is not normally an article of food. Human sacrifice to the dead is sometimes for the purpose of supplying them with food.<sup>8</sup> But this is obviously exceptional, just as the dead are themselves in an exceptional state. They are now supernatural, and supernatural (in the literal meaning) should be their sustenance. There is no relic of cannibalism in the meriah sacrifice, but the principles of religious cannibalism are latent in it.

Ancestor-worship, it is possible, may often have led to the idea that a supernatural source of magical power may be secured by slaying ceremonially a human, or indeed any living, victim. If the dead are divine, new additions to the list of the divine can be made by death. The murderer has an option on the spirit of him he slays. Blood-thirsty priests and despots may at times have worked their murderous wills according to some such principle. It is necessary to insist on this, as also on the satisfaction of the social lust for blood. The latter certainly is to be seen in the meriah sacrifice; both the latter and the former are as evident in the Mexican holocausts as they were in the auto da fé.

The gods of Mexico were enhaloed with horror; but the human sacrifices almost daily consummated to glut their malignancy were appreciated by the congregation as intensely as the gladiatorial combats were by the populace of Rome. In some cases

the sacrifice was actually preceded by a combat, the victim having a chance of escape if he succeeded in slaying all comers who cared to fight him on the pavement of the altar.

'Scarcely any author pretends to estimate the yearly sacrifices throughout the empire at less than twenty thousand, and some carry the number as high as fifty thousand.'1

Both Mayas and Mexicans prosecuted endless wars, with the principal object of obtaining victims to serve as sacrifices to their gods.<sup>2</sup> A typical picture of such a sacrifice is supplied by that in honour of Tezcatlipoca, though the figure of this deity is usually mild and venerable.

usually mild and vencrable.

'The man chosen to represent him [Tezcatlipoca] and dis in his stead was a young captive of handsome person and illustrious birth. During his captivity the youth thus doomed to play the fatal part of divinity was allowed to range the streets of Mistico freely, escorted by a distinguished train, who paid him as much respect as if he had heen indeed the god himself instead of only his living image. Twenty days before the festival at which the tragic mockery was to end, that he might taste all the joys of this transient world to which he must soon hid farewell, he received in marriage four women, from whom he parted only when he took his place in the last solemn procession. Arrived at the foot of the sacred pyramid on the top of which he was to die, the sacrificers saluted him and led him up the long staircase. On the summit five of them selzed him and held him down on his back upon the sacrificial stone, while the high priest, after howing to the god he was about to kill, cut open his breast and tore out the throbling heart with the accustomed rites. But, instead of heing kicked down the staircase and sent rolling from step to step like the corpses of common victims, the body of the dead god was carried respectfully down, and his flesh, chopped up small, was distributed among the priests and nobles as a blessed food.'9

The details, however, are too numerous to add to the account. The problem chiefly considered hitherto has been that of the dying god. Certainly, in the case of the victims to Tezcatipoca, Huitzilonother case of the victims to rezentifoca, Hutzhopochtli, Huixtocihuatl, and Centeotl, there was
representation of the deity. Whether Frazer's
explanation can be accepted is, however, doubtful.
It is noteworthy that of the Nicaraguan human
victims it is stated that 'they were supposed to
become deified after death, and to exercise great
influence over the affairs of life.' The Mexicans,
again, engrifieed man with white hair and white again, sacrificed men with white hair and white faces during eclipses of the sun; the Tlascaltecs sacrificed albinos during eclipses of the moon. Bancroft conjectures, whatever the original sig-nification of the human sacrifice, that finally the body, whose essence regaled the god, and whose accidents were participated in by priests and people, was regarded as the remains of a divine feast, and therefore sacred food; that religious anthropophagy degenerated into an unnatural appetite for human flesh. He is desirous of explaining the extraordinary popularity of these sacrifices. They certainly may be regarded as including a recrudescence of cannibalism. More significance, however, is to be attached to the holisms acquired of the death. Apart from the holiness acquired after death. Apart from the factor of substitution and penal sacrifice, this ap-Accordingly, the pears to be most important. pears to be most important. Accordingly, one sacrifice may be said to have the character of a rite intended to make gods by slaying men. All men, animals, and things 'offered up' become ipso facto endued with magic energy. But this character with the character of a character with the character of the c acter is itself not primary. Hindutheory speculated on the nature of the essence of sacrifice. Some of the conclusions throw light on the present subject.

According to the Aitareya Brāhmaņa, the gods killed a man for sacrifice. But the part fit for an killed a man for sacrifice. But the part in lot an offering, the medha, passed into a horse, which thus became meet for sacrifice. The gods killed the horse, but the medha passed into an ox, and subsequently in the same way into a sheep, a goat, and the earth. The medha stayed longest in the goat. All those animals from which it passed are

1 Prescott, i. 69. 2 Bancroft, li. 420, 740, 745. 3 Frazer, GB3, pt. v. vol. i. p. 92f., from Brasseur de Bourbourg, iil. 510ff.; see Bancroft, il. 819ff., iii. 422. 4 Bancroft, iil. 494. 5 fb. 110f. 5 lb. 444. 7 See MI i. 68.

unfit for sacrifice, and therefore their flesh is not to be eaten. When the medha entered the earth, the gods surrounded it to prevent its escape. There it turned into rice, and therefore rice is now sacrificed.1

According to the Kālikā Purāņa, slaying at a sacrifice, even of a man, is ipso facto no murder.2

The Taittiriya states that the institutor of the sacrifice, when slaying a man, immolates Virāj. Virāj was the first male created by Prajāpati, and was the father of mankind. From him is produced the male for every sacrifice.

'The form of a man is like that of Virāj, the type of the animated creation. By the immolation of the man is Virāj immolated. Now Virāj is food, and therefore through Virāj is food obtained.'3

With regard to the difficult problem of 'representing' the god, a case in point is given by the Taittiriya. For the purusamedha, human sacrifice, the Taittiriya enjoins that to a deity of the Brāhman caste a Brāhmana must be sacrificed; to a deity of the Kṣatriya, a Kṣatriya. Possibly the clue to representation is in the practice of periodic god-making. A man, and a particular kind of man, being made by sacrifice into a deity, it is natural that bis attributes should be repeated at the next sacrifice. Thus a particular god is recreated periodically. When, later, his incarnation is regarded as a victim, the victim retains the ebaracters of the god. See, further, the 'Indian' article.

Often the choicest specimens of humanity are required for human sacrifice. 'The death of the righteons makes atonement'; bere moral worth is required. The Kālikā Purāna enjoins that the victim must be free from physical defects and unstained by crime; nor may it be a female. The case of slaves, malefactors, and diseased persons

has already been noted.

Vicarious atonement becomes vicarious in a secondary sense, when another person is sacrificed instead of the original victim. In Eastern Africa, a freeman guilty of causing a conflagration close to the 'chosen abode of the deity' is liable to be offered as a sacrifice to the god who has been annoyed, but he may redeem his life by giving up one of his slaves to be offered in his stead." Animals, again, certainly have figured largely as substitutes for human victims.

'According to the Israelite's notion, Jahveh in his clemency permits the soul of the animal sacrificed to take the place of that of the sacrificer. No transfer of guilt to the animal sacrificed takes place; the blood of the latter is clean, and remains so, as is evident from the very fact that this blood is put upon the altar; it is a token of mercy on Jahveh's part, that he accepts it. . . . Nor can it he asserted that the animal sacrificed undergoes the punishment in the place of the transgressor.'s

Effigies, lastly, may take the place even of bread and fruits of the earth as substitutes for the human victim. In Malaysia, dough models of human beings, actually called 'the substitutes,' are offered to the spirits. Such substitutes occur in all parts of the world, and in the majority of its organized religions.

LITERATURE.—Ch. xix. in E. Westermarch's Origin and Development of the Moral Ideas, London, 1906-08 (f. 434-476), is the standard account of the subject. The art. mentions the chief sources of facts.

A. E. CRAWLEY.

HUMAN SACRIFICE (Chinese). — Unlike many nations of ancient or oven modern times, such as the Aztecs, or Dahomans, the Chinese have had no regular system of human sacrifices, offered to the deity or forming a part of their idolatrous worship. Their altars bave never recked with the blood of

the brute creation, much less with that of their fellow-man. We have no record of holocausts of victims being offered up at the shrines of their deities. Flesh is no doubt offered in the rites of worship, but the animal or fowl is already slaughtered and dressed before being brought to the altar, and is offered as food might be to a man—it partakes of the character of an oblation, instead of that of a sacrifice. The type of deities, i.e. of deified human beings, is more that of mild or benevolent gods or There is no equivalent of the Indian goddesses. Kali; there is nothing like the ponderous car of Jagannath leaving mangled remains of crushed humanity in its course. The fierceness of the Chinese gods is developed in the direction of the destruction of demons; they do not thirst for human blood and do not require to be appeased

by the offering of it.

Notwithstanding all this, there are indications to be found in Chincse history of a feeling in tho Chinese mind that High Heaven may be propitiated by the shedding of human blood; for several instances occur of human sacrifice being suggested at least. One of the most noteworthy was in the time of Tang (1766-1753 B.C.), the founder of the Shang dynasty. We are told by the great historian Ssu-ma Ch'icn and by others that, as in the land of Egypt in the time of Joseph, seven years of drought prevailed in the Empire, leading to a terrible famine. To such extremities did matters come that it was suggested that a human victim should be offered as a sacrifice to appeaso Heaven and bring down the showers of much-needed rain. The Emperor Tang said: 'If a man must be a victim, I will be he, and prepared himself for the sacrifice. Ere the prayer he offered was finished, the rain fell in heavy Ere the showers on the parched land for hundreds of miles.1

The Scythian custom of slaying the wives and attendants of deceased chieftains and others high in rank or social position was in vogue in ancient China. A time-honoured custom of burying wealth and valuables—gold, silver, precious stones, silks and embroideries, etc.—with the deceased lasted long. Wives, concubines, and slaves were also looked upon as the property of their lords and masters, and shared the same fate as the other possessions thus interred; for, with the anthropological conceptions of the Chinese with regard to a future state of existence, the life beyond the grave was supposed to be almost a counterpart of this life; and, since such articles and persons were necessary for the happiness and comfort of the living, it was thought that they were equally necessary for the dead, and that those who had passed into another state of existence would suffer and barbour resentment unless freely supplied with them. The drain upon the resources of the people, owing to the enormous expenses entailed by the grand funerals, was such that a gradual process cnsued of substituting less costly articles for the rich wares and precious things, so that articles of no real value took the place of the original offerings in most cases; and, in the same way, the substituting of imitation men and women has replaced the immolation of human beings at the obsequies of the great and wealthy. We have in the Book of Mencius a passage which shows that wooden images, 'the semblances of men,' were used to bury with the dead. We are told that in ancient times bundles of straw imperfectly representing men were taken to the gravo and interred with the deceased to serve in the next world as his attendanta. Later on, after the advent of the Chow dynasty (1122-249 n.c.), wooden images were substituted for

them. These had springs which caused them to move, probably in imitation of the movements of men.<sup>1</sup> It is stated that later on came the practice It is stated that later on came the practice of burying living persons with the dead. Confucius ascribed this to the invention of the wooden images; but it is more probable that the human sacrifice to the manes of the deceased was the original form, and the straw and wooden images were substituted for the more cruel custom, as was the case in Japan, where clay images were substituted about the time of the Christian era for the human victims.2 Images are now made of a bamboo framework and covered with coloured paper to represent human beings, clothed in accordance with the station in life of those they are supposed to represent. These are carried, as in the case of the late Empress Dowager, in the funeral procession and burned. It is believed that they are thus transmitted to the spirit world and there wait upon their supposed lords and masters.
This practice of sacrificing living human beings

to the manes of the departed who occupied high positions when alive was common, as may be gathered from the occasional references to it in Chineseliterature. The silences concerning it have also been considered as corroborative of the practice; for, being common, it is supposed that reference was made to it only under exceptional circumstances.8 The custom appears to have been indigenous among the Chinese and not imported from Tatar sources, as Biot 4 and even some Chinese

have thought to be the case.

The Chinese Herodotus, Ssu-ma Chien, mentions the first instance we have on record, when a ruler, the first instance we have on record, when a ruler, Wu, of the Ts'in State made 66 people 'follow the dead [Duke Ch'ing] into the next world.' A nephew [Duke Muh] of this prince had 177 sacrificed at his death. Among these were three brothers put into the grave with the coffin of the Duke. Their fate is deplored in the songs of the State included in the ancient Chinese Classic, the Shi King, or 'Book of Poetry.' This was in 620 B.C.' Hundreds perished at the royal funerals, and scores at those of officers and nobles, in antiquity. scores at those of officers and nobles, in antiquity. The philosopher Micius, who lived about the 3rd cent. B.C., inveighing against extravagant funerals, informs us of this. At the death of the Great Ts'in Shi Hwang, the builder of the Great Wall and the destroyer of the books, all the women in his harīm who had borne him no sons were shut up in his tomb (209 B.C.). There is some reason for believing that human sacrifices occurred at the

construction of the Great Wall.' 10
In the Ch'un Ch'iu, or 'Spring and Autumn Annals,' of Confucius and in the two Commentarics on them, the *Tso Chuan* and *Ku Liang*, mention is made of some cases. Two instances were in 639 and 529 B.C. respectively, and in neither case was it at funeral rites that the immolation took place. In the first the Viscount of Tsang was sacrificed instead of an animal 11 by the people of Chu, to awe some wild tribe in the east. The Minister of War inveighed against this sacrifice of a man, a ruler of State to for unlicensed and investigate and intervals. a State, to 'an unlicensed and irregular spirit.' In the second case the heir of the State of Ts'ai, after the destruction of that State, was carried by the victors to their own State of Tso and sacrificed on a

mountain-one would suppose as a thank-offering for the victory gained 1-again instead of an animal. In the *Tso Chuan* it is stated that living persons were interred with the dead ruler Duke Wan of Sung (587 B.C.).<sup>2</sup> Another case is mentioned in the same work where, out of gratitude to a king for his clemency to his father, a son buried two daughters with the sovereign.8 Another, a servant, dreamed that he carried his ruler up to heaven and later in the day he lifted the dead body of this same ruler out of a privy and was buried with him (580 B.C.). Again, in 502 B.C. we read of five men being buried alive at the death of a feudal ruler of the State of Chu. It is stated in the 'Annals of Wn and Yueh's (ch. 2) that a crowd of men were, by a trick, pressed alive into the mausoleum of a princess in 510 B.C. In a number of cases these entombments were disapproved of by the people.

In another of the Chinese Classics, the Li Ki, or Book of Rites, accounts are given of two proposals to bury the living with the dead. In one case the widow and steward of the deceased, a grandee of the State of Ts'ai, proposed that, to provide for the dead man when ill in the next world, some persons should be sent to minister to him. His younger brother, who was a disciple of Confucius, said that it was not proper to do so, but suggested that, if it must be done, the widow and steward should be the persons to be sent. This pronouncement settled the matter, and no one was sacrificed.7 The other case was that of a son who refused to carry out his father's injunctions to bury his two concubines with him in the same coffin.<sup>8</sup> There is a similar case where directions were given by a dying man that a favourite concubine should be buried with him, though he had previously directed that she should be married again. The son obeyed the earlier order. A Queen Dowager, who loved a minion, commanded that he should be buried with her; but, being reasoned with, yielded to persuasion and gave up the idea (309 B.C.). The Prince of Wu (514-496 B.C.) sacrificed a large number of men and women at the death of a favourite daughter in order that they might accompany her. In the Han dynasty (206 B.C.-A.D. 25), certain tombs of princes of the Wei State (334-286 B.C.) were opened. In one a hundred dead bodies were found—all women with one exception—probably intended for the deceased's harim in the spirit world. In another grave two bodies were found. To come later down in history, we find that this practice was specially maintained. by the Tatar Liao dynasty which ruled over Northern China (A.D. 927-1125).<sup>13</sup> It will thus be seen that throughout Chinese

history there are indications of the prevalence of this custom. One instance was in A.D. 954, when the first Emperor of the After Chow dynasty (A.D. 951-960) gave orders for a simple funeral for himself, and on no account was any one to be injured in connexion with it.14

We find notices also of sacrifices to the spirits of Nature, as, for instance, in A.D. 1130-31 at the siege of a city in the North of China when the Kin invaders tore out the hearts of twelve prisoners and offered them as a sacrifice for a change of

wind;1 or, again, we read of a maiden being

sacrificed to a river-god.2

In the Yuan dynasty (A.D. 1280-1367), women were buried with the Mongols who ruled the empire then.<sup>3</sup> In the Ming dynasty (A.D. 1368-1644) the custom was extensively practised during the first hundred years, the first, third, fourth, and fifth Emperors being honoured in this year with 38, 16, 4 and 7 victims respectively. way with 38, 16, 4, and 7 vietims respectively. It was also the rule in the case of princes. This went on until the Emperor Ying Tsung († A.D. 1464) abolished it for his own funeral, though he sacrificed several women at his brother's death. The late Manchu dynasty (A.D. 1644-1911) at first also practised this, at all events during the reign of the first Emperor Shun Chi (A.D. 1644-61). There is no evidence to show whether the later sovereigns sanctioned it.5

It has been thought that the Chinese practice of placing figures of men in an avenue leading to the tomb, as at the Imperial tombs, had its origin in human sacrifice. Isolated cases occur in which the Chinese offer to the manes of a man killed or murdered the killer or the murderer or a portion of his body.7 'Human sacrifiees are said to have taken place in the building of a silk-fila-ture at Soochow.'8 It was also and may still be the custom for new furnaces in potteries in the Kiang-si Province to be consecrated with the shedding of a child's blood. This sacrifice is done secretly, and it is supposed to prevent accidents or evil influences. One of the aboriginal tribes in China is said to offer one of their own number every year as a sacrifice to their dog-idol.<sup>9</sup>

Closely akin to the sacrifices of the living to the dead is a species of satī sometimes practised in China, when the widow publicly commits suicide

to follow her dead husband to the grave.

Even in recent times, prisoners or slaves have been buried under bridges, city-gates, and public buildings. A case occurred in 1900, when one of the leading officials sacrificed a gaol-bird to his drum when starting for the wars. LITERATURE.—This is cited in the footnotes.

J. DYER BALL.

HUMAN SACRIFICE (Greek).—It has often been observed that the Homeric poems contain hardly any allusions to human sacrifice. markable exception occurs in Il. xxiii. 175, where, after sacrificing four horses and two dogs on the funeral pyre of Patroclus, Achilles crowns the ceremony by slaying twelve Trojans, doubtless to serve as the thralls of Patroclus in the world below, just as the horses and dogs were required to minister to other needs. The sacrifice in questo minister to other needs. The sacrifice in question is one of a class which is often represented in early civilizations (Tylor, PC<sup>4</sup> i. 458 ff.), and is best illustrated by the account in Herodotus (iv. 71) of the funeral of the Scythian kings, when cooks, grooms, butlers, and others of the royal honsehold were strangled and buried in their master's tomb. The rite was, of course, based upon the belief that the dead continue in the world of spirits the same course of living as they have followed on earth; but, though the belief itself prevailed extensively

in the Homeric age, the proceeding of Achilles was such as to provoke from the poct the nnusual comment, 'evil was the deed that he contrived.' Some critics have laid it down that the Homeric religion was succeeded by a period of joyless and gloomy snperstition, in which piacular offerings first becaine customary. Although there is some measure of truth in this view, it is equally important to observe that, so far as human sacrifices are concerned, the Homerie poems stand upon the same level as the rest of Greek literature, which is representative of an advanced stage of ethical development, and consequently condemns as unworthy of Hellenio enlightenment the offering up of human lives to appease the wrath of an offended deity. The sacrifice of human victims on stated occasions is regarded as a barbarian practice (Soph. fr. 122), evidenced by the cruel exposure of Andromeda and Hesione, who were rescued by Greek heroes, and the savage rites of the Tauric priesthood (Eur. Iph. Taur. 465). The Phenician Molech, who was honoured by the sacrifice of children (Plut. de Ser. num. vind. 6, p. 552 A), was regularly identified with Cronos, whose primitive tyranny was overthrown by the milder dominion of Zeus (M. Mayer, in Roscher, ii. 1501 ff.). Æselylus (Ag. 1567 calls the sacrifice of Iphigenia lawless; Pausanias (vii. 19. 8) records that the Delphic oracle referred to the recurring sacrifice of a youth and a maiden at the precinct of Artemis Triclaria in Achaia as strange or forcign; and Pelopidas (Plut. Pelop. 21), when ordered to sacrifice a maiden as a condition of success in battle, shrank from so horrible and barbarous an expedient.

Yet, although literary sentiment professes to repudiate human sacrifice as incompatible with the spread of Greek civilization, the prevalence of the custom in the pre-historic age is attested by the persistence of its appearance in the heroic legends which poetic tradition has preserved. These which poetic tradition has preserved. These legends provide material which enables us to surrey the conditions applicable to human sacrifices. It is generally admitted that many of them were piacular in character; that is to say, they arose from a conviction that the anger of a divine power had been incurred by some act of impiety, that the well-being of the community was imperilled in eonsequence, and that the life of one of its members must be surrendered in expiation of the guilt. Recent investigations support the conclusion that no single formula is adequate to cover the varying circumstances in which recourse was had to human sacrifice. Thus, the rites connected with the periodical expulsion of evil, where the victim assumes the character of a scapegoat, have not yet been traced to a single source; and it must be recognized that in many cases it is impossible to discover precisely how the worshippers believed that their offering would be gratifying. Yet the desire to appease an enraged deity or to prevent his jealousy by timely precautions, when there may be a risk of infringing his prerogatives, is frequently indi-

cated as an impelling motive.

It might happen that the wrath of heaven was declared by some special manifestation of displeasure, such as the occurrence of a drought or a pestilence, or the interposition of some unusual obstacle to the successful issue of an undertaking. Thus the sacrifico of Iphigenia was demanded because the detention of the Greek flect at Aulis by contrary winds was a sign of divine anger (Æsch. Ag. 198 ff.). Similarly, the sacrifice of Polyxona on the tomb of Achilles was nrged by Neoptolemus as a means of obtaining favourable winds for the return from Troy (Eur. Hec. 536 ff.). Both of these incidents belonged to the tradition of the

1 The developed story shows a conflation of two motives—the duty of offering a preliminary sacrifice to a sea-god (see art

Epic Cycle, the sacrifice of Iphigenia being related in the Cypria, and that of Polyxena in the Iliupersis; but authority is scarcely needed to convince us that these and similar legends are handed down from time immemorial, and testify to the primitive beliefs of the race. An echo of the legend of Aulis, possibly combined with an attempt to ascribe an Oriental character to the practice, is preserved in the story recorded by Herodotus (ii. 119), that Menelaus, when detained in Egypt by adverse weather-conditions, sacrificed two Egyptian boys as explatory victims. Yet another illustration may be found in the story of Sinon (Verg. £n. ii. 116 ff.), and an example taken from historical times shows how deeply-rooted was the superstition which required extraordinary sacrifices before a departure on an important voyage. Agesilaus, about to embark at Aulis on his expedition against Persia, dreamed that a human sacrifice was required from him; but, since such an act would have been abhorrent to the spirit of the times, he was content to offer up a hind in memory of Agamemnon's sacrifice (Plut. Ages. 6). When the subjects of Athamas were afflicted with a drought, the king received information that an oracle required him to sacrifice his children Phrixus and Helle; and he was about to comply with this command when the children were miraculously rescued by their immortal mother Ncphele, and dispatched on their famons journey over the sea on the back of the ram with the golden fleece (Apollod. I. ix. 1). When attacked by famine and (Apollod. I. ix. 1). When attacked by famine and pestilence, the Athenians, in obedience to the command of an old oracle, slew the daughters of Hyacinthus on the tomb of Geræstus the Cyclops (ib. III. xv. 8).

Usually, however, the danger which calls for so exceptional a remedy is an approaching conflict with a foreign foe. In the Heraclida of Euripides (404 ff.), Demophon, preparing to resist an Argive invasion, after he had refused to surrender the children of Heracles, was warned by the sooth-sayers that it was essential for him to sacrifice to Persephone a maiden of noble birth. Similarly, when Thebes was beleaguered by the army of Adrectus and Polymer and rastus and Polynices, Tiresias demanded of Creon that he should sacrifice his son Menœceus in order to placate the hostility of Ares, which Cadmus had incurred by slaying the dragon (Eur. Phæn. 911 ff.). Other instances are taken from the legendary history of Athens. Erechtheus, when legendary history of Athens. at war with Eleusis, was promised success, if he would sacrifice one of his daughters (Apollod. III. xv. 4). A similar story was related concerning the three daughters of Leos (Ælian, Var. Hist. xii. 28), and the devotion of King Codrus saved Athens when he learnt that his death was a necessary condition of the defeat of the Lacedæmonian in-

vaders (Lycurg. 84 ff.).

The general impression which we receive from Greek literature is that in historical times human sacrifice was obsolete, and it comes as a surprise to read in Plutarch that Themistocles, before the battle of Salamis, was driven by the pressure of public opinion to consent to the sacrifice of three Persian captives in honour of Dionysus Omestes (Plut. Themist. 13). Grote, it is true, dismisses the story as a fiction (iv. 479<sub>2</sub>), and it is obviously of such a kind as a later age might have invented by way of scandalous embellishment for a famous chapter in the annals of the past. But, whether it is credible or not, we are at least entitled to draw from it the inference that there were not wanting in the classical age those who still chcrished a belief in the efficacy of human sacrifice, and were prepared to advocate a resort to it in seasons of

ACHILLES) before embarkation, and that of providing a deceased bero with the appropriate mortuary gifts.

supreme danger. The conclusion is in agreement with the other available cvidence. Before the battle of Leuctra, Pelopidas dreamed that he was warned by a spirit in a vision to sacrifice a fair-haired maiden, if he wished for victory in the approaching battle (Plut. Pelop. 21). A serious contention ensued between the friends of enlightenment and those who would have him obey the warning. But a fortunate accident released the general from his dilemma; for a quick-witted seer, catching sight of a chestnut filly, which had separated from the herd and charged into the ranks of the army, cried out that here was the very victim which the infernal powers required. Equally characteristic is the account given by Pausanias (iv. 9. 3–10) of a similar incident in the First Messenian War, which makes it clear that even at that early date Greek sentiment, while even at that early date Greek sentiment, while fearing to disobey the express injunction of an oracle, was only too ready to take advantage of any pretext for declaring that the sacred command had been fulfilled.

But there is incontrovertible evidence that, under stress of calamity, religious fears were too strong to be held entirely in check by the growing hatred of superstitious barbarities. Thus we read that, in the course of his famous purification of Athens, Epimenides the Cretan caused one or two youths to be sacrificed (Athen. 602 C; Diog. Laert. i. 110). Moreover, several authorities state (e.g. schol. Aristoph. Eq. 1136) that certain outcasts were maintained by the Athenians at the public expense, in order that, if a plague or a famine attacked the city, some of them might be sacrificed at scapegoats ( $\kappa \alpha \theta d \rho \mu \alpha \tau \alpha$ ,  $\phi a \rho \mu \alpha \kappa \sigma l$ ), and so the taint of pollution might be removed. Nor was the practice confined to occasions of extraordinary calamity, for there are other examples, which establish that in certain cults human victims were sacrificed annually or at regular intervals. It has been inferred with reason from a statement of Pausanias (viii. 38. 7) that a rite of this kind was celebrated in honour of Zeus Lycœus on the summit of Mt. Lycœus in Arcadia as late as the 2nd cent. A.D. (cf. Porphyr. de Abstin. ii. 27; [Plat.] Minos, 315 C). At Halos in Thessaly, Xerxes was informed that the eldest son of the royal stock, which traced its origin to Athamas, was under a tabu to keep away from the town hall, or, if he was caught attempting to enter it, he must be sacrificed at the altar, and that many had perished in this way (Herod. vii. 197). Every year in Rhodes, at the festival of Cronos, a condemned criminal, who had been kept back for this purpose, was led outside the gates of the city and put to was led outside the gates of the city, and put to death; and something of the same kind took place quath; and something of the same kind took place at Salamis in Cyprus, in honour of Aglauros, the daughter of Cecrops (Porphyr. de Abstin. ii. 54). At the temple of Apollo in Leucas, a criminal was thrown over the cliff into the sea every year as a scapegoat; but the severity of his fall was mitigated by attaching live birds or feathers to his body, and men waited in small boats for his descent so as to rescue him and convey him away scent so as to rescue him and convey him away from the island (Strabo, 453). The festival of the Thargelia, which was celebrated at Athens in the middle of the summer, was the occasion of the performance of a similar rite. Although the evidence is not altogether free from doubt, it seems that two victims, one representing the male citizens and the other the female, were led out of the city as scapegoats and stoned to death (Harpoer. s.v. φαρμακόs). The sacrifice of a scapegoat at the same festival is also attributed to the Toniang of Asia Minor (Hippoers for 27) Ionians of Asia Minor (Hipponax, fr. 37).

The question of origins is too intricate and

obscure to be discussed here, and cannot profitably be examined, much less solved, by the light of

the Greek evidence alone. Moreover, the Greek examples, whether ritual or mythical, have been contaminated and disturbed by successive accretions of advancing thought, and do not usually supply typical illustrations of primitive belief. While the extraordinary sacrifices show clear traces of the piacular motive, those which occurred at regular intervals are less clearly outlined, and can perhaps be satisfactorily explained only by being brought into comparison with the religious observances of the most backward races. Thus, it has been contended that the ceremony on Mt. Lycens was originally the cannibal feast of a wolf-tribe, and that, whenever the hnman victim is a captive or a foreigner, the origin of the ritual may be looked for in the feast of a totem group (W. R. Smith, in  $EBr^9$  xxi. 138).

It will have been observed that there is very scanty evidence for the continued existence of hnman sacrifice as an ordinary practice of the most civilized communities of ancient Greece. If we put aside the conscrvatism of remote and rural districts, and the influences likely to have been exerted by Oriental cults, the survival of these cruel rites was hardly tolerated by public opinion; and, where it was not entirely suppressed, it was mitigated by the selection of victims from the lowest class of criminals. Thus, humanitarian scruples were soothed with the reflexion that divine justice required the extinction of those who were no longer worthy to live. But, wherever it was found practicable, the rigour of primitive superstition was softened by the substitution of a symbolical blood-shedding or of a non-human victim. It may be that in some cases, as has recently been maintained (Farnell, CGS i. 93), human accrifice was not the primitive fact, but a human sacrifice was not the primitive fact, but a development from the sacrifice of the theanthropic animal, when the significance of the latter was misunderstood. Nevertheless, it is certain that the Greeks themselves believed in the substitution of an animal surrogate, and the evidence relating to the fact of such substitution is too strong to be

neglected entirely.

The flagellation of Spartan boys at the altar of Artemis Orthia is declared by Pausanias (iii. 16. 10; see, however, Frazer, in loc.) to have been instituted by Lycurgus in place of the older custom of killing a man who was selected by lot. A curions passage in Euripides (*Iph. Taur.* 1458 ff.) proves that in the temple of Artemis Tauropolos at Halæ on the S.E. coast of Attica it was customary at the annual ceremony of the Tauropolia to lead a man in the guise of a victim to the altar, and to scratch his neck with a sword sufficiently to let the blood flow. The substitution of an animal for a human victim is familiar to every one from the legend of Iphigenia, and many analogous cases might be quoted (Plut. Parallela 35, p. 314 C; Pausan. ix. 8. 1, etc.). When the sacrifice of an Athenian maiden was required to stay a famine, a certain Embaros promised to give his daughter, but dressed up a goat in her place and sacrificed it at the altar (Param. i. 402). Ælian (Nat. An. xii. 34) records an extraordinary ceremony which took place at Tenedos in hononr of Dionysus the Man-slayer. A cow which had recently calved was tended like a woman in childbed, and her calf was shod in buskins (κόθορνοι) and then struck down before the altar. But the man who had used the axe was publicly stoned and forced to make his escape to the sea, where presumably he was ceremonially cleansed. Some of the details recall the well-known rite of the Bouphonia (Frazer,  $GB^s$ , pt. v. vol. ii. p. 4ff.); but that the calf was the substitute for a human victim seems to be established by the statement of Porphyry (de Abstin. 11, 55). HUMAN SACRIFICE (Indian).-In this article the expression 'human sacrifice' is used to include not only propitiatory offerings to a god, but also all cases of the immolation of human beings, whether voluntary or otherwise, in furtherance of religious or superstitious objects.

1. References to the subject in Hindu religious books.—The Aitareya Brahmana to the Rigveda describes (vii. 13-18) how a certain king vowed that he would sacrifice his first-born to the water-god Varuna, if that deity would bless him with a son. One was born in due course, but the king hesitated to fulfil his vow—until the boy had grown up, when he ran away from home to escape the fate in store for him. The king was afflicted with dropsy as a punishment for not sacrificing him. At last a Brāhman was persuaded to sell his son as a substitute. This youth was tied to a stake, and was on the point of being immolated to appease Varuna when he recited certain sacred verses, whereupon some other deities intervened, and he was released.

It has been argued that, as the victim escaped, this story does not prove that the custom of offering human sacrifices actually existed, and that the rite was merely symbolical. But the whole story loses its point unless a real sacrifice had been intended. It is, moreover, in accordance with a custom which was put a stop to by the British Government only a century ago in Bengal, where Hindu women were in the habit of consigning their first-born babes to the Ganges in fulfilment of similar

The above story is an instance of the sacrifice of children in the fulfilment of vows. Another form of buman sacrifice was the purusamedha, which was celebrated for the attainment of supremacy over all created beings, and at which eleven human beings and eleven barren cows were offered np. The ceremony is described in the White Yajur Veda, of which the Vajasaneyā Samhitā opens with verses intended to serve as mantras (charms or incantations) for offering of human sacrifices. Various gods are enumerated, with the kind of victim suitable for each, such as a priest for Brahma, a musician for the divinity of music, and a fisherman for the gods of rivers (i.-xii.). Further details are contained in the *Taittiriya* (iii. 4) and Satapatha Brāhmaṇas (xiii. 6), as well as in the Śānkhāyana (xvi. 10-16) and Vaitāna Śrauta Sūtras (xxxvii.f.).

In the Satapatha Brahmana It is stated that the victims are In the Satapatha Brannaga it is stated that the victims are to be let loose after being consecrated; butthis work is of a much later date. The earlier records clearly contemplate the actual shughter of the victims; and the account of the rite given in the Satapatha Brāhmaṇa Itself can be explained only on the hypothesis that it was a modification of a prior rite in which human beings were immolated.

The asvamedha, or horse-sacrifice for the attainment of wealth, also required the immolation of a human being (Satapatha Brāhmaṇa, XIII. iii. 6, § 5, etc.; see Eggeling, SEE xliv. p. xxxix f.); and human sacrifice, though reprobated, is mentioned in the Mahābhārata (e.g., ii. 626 ff., 861 ff.).

The Purāṇas and Tanṭras, which were compiled

in very early mediæval times, contain frequent references to another rite requiring the immolation of a human victim. This was the narabali, on human sacrifice to the goddess Chandikā, a dark, fierce, sanguinary divinity, who is represented in the most awful forms, garlanded with a string of

1 These passages are quoted at length by R. Mitra in his paper On Human Sacrifices in Ancient India, JASBe vol. xlv. [1876]

human skulls, besmeared with human blood, and holding a skull in one hand and an uplifted sabre in the other. In the  $K\bar{a}lik\bar{a}$   $Pur\bar{a}na^1$  it is said that in the other. In the Kālikā Purāna¹ it is said that 'hy a human sacrifice attended hy the rites laid down, Devī (the goddess, i.e. Chaṇḍikā) remains gratified for a thousand years; and hy the sacrifice of three men, one hundred thousand years. By human flesh the goddess Kāmākhyā's consort Bhairava, who assumes my shape, remains pleased three thousand years. Blood consecrated immediately hecomes amhrosia, and, since the head and flesh are gratifying, therefore should the head and flesh he offered at the worship of the goddess. The wise should add the flesh free from hair, among food offerings.' Minute details are added regarding the ways in which, the times when, and the places where the which, the times when, and the places where, the rite should be celebrated.

which, the times when, and the places where, the rite should be celebrated.

'Having placed the victim before the goddess, the worshipper should adore her hy offering flowers, sandal paste, and bark, frequently repeating the mantra appropriate for sacrifice. Then, facing the north and placing the victim to face east, he should look hackward and repeat this mantra: "O man, through my good fortune thou hast appeared as a victim; therefore I salute thee; thou multiform and of the form of a victim. Thou, hy gratifying Chandikā, destroyestall evil Incidents to the giver. Thou, a victim, who appearest as a sacrifice meet for the Valspavī, hast my salutations. Victims were created hy the self-born himself for sacrificial rites; I shall slaughter thoe to-day, and slaughter as a sacrifice is no murder." Thus meditating on that human-formed victim, a flower should he thrown on the top of its head with the mantra: "Om, Airh, Hrifin, Srifin." Then, thinking of one's own wishes, and referring to the goddess, water should he sprinkled on the victim. Thereafter the sword should he consecrated with the mantra: "Os sword, thou art the tongue of Chandikā and hestower of the region of the godd. Black and holding the trident, thou art like the last dreadful night of creation; horn fierce, of hloody eyes and mouth, wearing a hlood-red garland . . . salutations be to thee." Tho sword, having thus been consecrated, should be taken up while repeating the mantra: "Ath hush phat," and the excellent victim slaughtered with it. Thereafter, carefully sprinkling on the blood of the victim, water, rock-salt, honey, aromatics, and flowers, it should be placed hefore the goddess, and the skull also, with a lamp burning over it, should he placed hefore her with the mantra: "Om, Aim, Hrifin, Sriin, Kaušiki, thou art gratified with the blood." Thus, having completed the sacrifice, the worshipper attains rich reward.'

In the fifth act of the Mālatimādhava, hy the dramatist Bhavabūti (fi. c. A.D. 690), is a vivid description of the attempt of an A

2. Former prevalence of sacrifices to Kālī.—These tāntrik sacrifices to Kālī or Chandikā were formerly common. They were freely offered in the days of Maratha rule; and in Western India there are many temples at which such sacrifices were common only a century ago. The victim was taken to the temple in the evening and shut up; and in the morning he was found dead, the dread goddess having 'shown her power by coming in the night

and sucking his blood.'

The great Saiva temple at Tanjore contains a shrine of Kālī where a human victim (a male child pnrchased for the purpose) was sacrificed every Friday evening, until the advent of British rule led to the substitution of a sheep. There are other temples in Southern India where similar sacrifices were formerly common. At the famous shrine of Dantesvari in Bastar it is said that in A.D. 1830 upwards of twenty-five men were immolated by the Rājā on a single occasion. Sleeman, writing in 1844, says that a certain chief in the Central Provinces once a year sacrificed a Brahman to the goddess.<sup>2</sup> The Brahmans of the Deccan used to sacrifice an old woman on the occasion of the Raja of Sātāra's annual visit to the fort of Partābgarh. According to Sir John Malcolm, the Karādi Brāhmans annually sacrificed a young Brāhman at Poona. This class of Brāhmans long remained under the suspicion of being addicted to human sacrifices, using poison to effect their ends when an open sacrifice would have been too dangerous. In N. Chevers' Report on Medical Jurisprudence, written in 1854, it is said that

there are strong reasons for helieving that there is scarcely a district in India in which human sacrifice is not still practised occasionally as a religious rite.'

W. Ward, writing in the early part of the 19th

A translation of the whole chapter on the subject was published by Blaquiere in Asiatic Researches, v. [1797] 371 ff.

Rambles and Recollections, London, 1844, i. 61.

cent., mentions various places in Bengal at which human sacrifices were offered:

'The discovery of these murders in the name of religion is made hy finding the hodies with the heads cut off near their lmages [of Kāli]; and, though no one acknowledges the act, yet the natives well know that these persons have been offered in accrifice.'

In the north-east of India, human sacrifices to Kālī were very common. The Koch king, Nar Nārāyan, who ruled in the 16th cent., is said to have immolated 150 men on a single occasion; and some of his descendants carried on the practice until the early part of last century. It appears from the Haft Iqlīm that in Koch Bihār persons, called bhogis, sometimes offered themselves as victims. From the time when they announced that the goddess had called them, they were treated as privileged persons. They were allowed to do whatever they liked, and every woman was at their command until the annual festival came round, when they were sacrificed to the goddess.2 More frequently, however, the victim was either a person kidnapped from a distance, or a traveller, or some person found abroad after midnight.

In the Jaintia parganas, human sacrifices to Kali were offered annually. As in Koch Bihār, persons frequently volunteered themselves as victims. If the would-be victim, or bhoge khāora, were deemed suitable, the Rajā would present him with a golden anklet and allow him to live as he chose, compensation for any damage done by him being paid from the royal treasury. But his enjoyment of these privileges was very short. On the Navami day of the Durgā Pujā, the victim, after bathing and purifying himself, was dressed in new attire, daubed with red sandalwood and vermilion, and bedecked with garlands. Thus arrayed, he sat on a raised dais in front of the goddess, and spent some time in meditation and the repetition of mantras. He then made a sign with his finger, whereupon the executioner, after attering the prescribed sacrificial mantras, cut off his head, which was placed before the goddess on a golden plate. The lungs were cooked and eaten by such Kandra Yogis as were present, and the royal family partook of a small quantity of rice cooked in the blood. When voluntary victims were not forthcoming, persons were kidnapped from outside the State. In 1832 were kidnapped from outside the State. four persons were thus taken from British territory, one of whom escaped and gave information. As the Rājā refused to deliver up the culprits, and as this was not the first offence, his dominions were annexed.

In the Tikha Kalpa, a MS work found in the Manipur State library, it is said:

'Human sacrifices are to be made, after the royal consent has heen obtained, on the occasion of public calamities such as war, or for the purpose of obtaining great wealth. . . A Brāhman or a woman should never be sacrificed. Neither should ons sacrifice his own hody, as then he will he guilty of the sin of suicide. A hrother, a father, a son, a wife's brother, a sister's son, a maternal uncle, none of these should he sacrificed; nor any one who is acquainted with the Vedas, or has renounced the world, or is a student, or helongs to the royal family. An enemy, a sick person, an eunuch, one who is infirm or has defects or scars should not he offered. The victim should be bathed, and properly decorated, and then hrought before the goddess. The person offering the sacrifice should turn his face towards the north, and the victim should face the east. Water should he sprinkled on the victim, and the following mantra uttered: "O goddess, living on the golden mountain, I offer this sacrifice to thee! He is good and stout and without blemish. I hind him to a post! I offer this sacrifice to remove my misfortune. O goddess, accept him! Although I kill him, I give him salvation!"

This is clearly another version of the rite pre-'Human sacrifices are to be made, after the royal consent has

This is clearly another version of the rite pre-

scribed in the Kālikā Purāņa.

In modern times the sacrifice of human beings has been replaced by that of animals—chiefly 1 History, Literature, and Religion of the Hindoos?, London, 1815, il. 201.

2 Similar liherties were allowed to prospective victims in ancient Bahylon and in Mexico (GB3, pt. iil. [London, 1911] p. 118 L, pt. v. [1912] vol. l. p. 238, vol. ii. p. 92 f.

 $(kh\bar{\imath}ra).$ 

3. Sacrifices by aboriginal tribes in north-east of India.—The gods whose favour it was desired to obtain in the rites ordained in the Vedas were genuine Aryan deities, and their worship, with the attendant sacrifices, was probably brought by the Aryans from their earlier settlements beyond the confines of India. The terrible goddess whose cult is described in the Purāṇas and Tantras is, however, a comparatively recent addition to the Hindu pantheon. It is believed that her worship and the bloody orgies with which it was attended were adopted from the religion of non-Aryan tribes, with whom the Hindus came into contact on the north-east frontier of India. It is, therefore, not surprising to find the immolation of human beings common in that locality, not only among Hinduized tribes like the Manipuris, Kochs, and Jaintias, whose practices have already been described, but also amongst those that had only partially, if at all, come under its influence. The Kachāri kings offered annual sacrifices to their sacred sword, taking as victims Hindus of any caste but the Brāhman, who were kidnapped for the purpose from other parts. Brāhmans officiated at the ceremony, and the heads of the victims were thrown down a masonry well. In the Rājmālā, or chronicles of the kings of Tippera, it is related that a king who ruled in the first half of the 16th cent. offered np some slaves as a sacrifice to the fourteen gods, 1 but the offering was not accepted, and the chontai, or high priest, announced that Mahadeb, or Siva, had ordered the immolation of the best commanders of the army. The king accordingly sacrificed eight of his chief captains. His snecessor, it is said, on two occasions defeated the Muhammadans, and sacrificed the prisoners to the 'fourteen gods.' Mention is also made of a king sacrificing three human victims to Siva, when praying for a son, and of another, when defeated by the Muhammadans, offering a Chandal boy to Bhabachari. Among the wild tribes of Hill Tippera and the Chittagong Hill Tracts, such sacrifices probably still occur, though it is naturally your difficult to obtain definite information records. very difficult to obtain definite information regard-

ing them.

The Chutiyas were still more addicted to human sacrifices, the object of their worship being Kesai Khāti, the cater of raw (human) flesh, whom they now identify with Kālī. The officiating priests, or dcoris, were members of the tribe and not Brahmans. The sacrifices were offered on regular occasions, and also to avert special calamities, such as cholora, smallpox, and drought. After the subjugation of the Clutiyas by the Ahoms, some four centuries ago, they were permitted to continue their ghastly rites. They were usually given for the purpose criminals who had been sentenced to capital punishment; but, when none such were available, a particular clan was expected to produce a victim, and in return certain privileges were granted to it. When a woman of this clan became pregnant, the astrologers were called on to ascertain the sex of the child. If they predicted that it would be a boy, the mother was carefully tended, and the child was anointed, as soon as it was born, with a paste made of turmeric and a kind of pulse. necessity arose, a volunteer was called for, and (it is said) was usually forthcoming; if not, a victim was taken by force. For some time he was kept at the temple and fed sumptuously, until in sufficiently plump condition to suit the supposed

1 Most of these gods are now identified with regular Hindn

taste of the goddess. He was then shaved, anointed with the same paste as at birth and adorned with gold and silver ornaments, and was conducted before the image of the goddess. Here he prostrated himself and was promptly decapitated by the bar deori, or high priest. The head was added to a heap of skulls that were piled in view of the shrine. Victims were taken only from amongst the juvenile members of the clan. As in other cases, persons who were deformed, or boro any scar or blemish, were regarded as unfit to be victims.

The offering of human sacrifices to Kesāi Khāti was common also in Nowgong, where the victim was usually some stranger who had come for purposes of trade. He was kept in close custody for about a fortnight, and was then led out, decked with flowers and jewels, and decapitated. As soon as this had been done, the spectators fled headlong down the hill on which the shrine stood, to avoid being devoured by the hungry gods and goddesses. The sacrifice seems here to have been offered, not in order to obtain some imaginary benefit for the worshippers, but rather with a view to providing food for the sanguinary goddess and so escaping her unwelcome attentions themselves.

The same idea of gods requiring human blood is found among the Khāsis, who believe in the existence of snake-gods called thlen. When a thlen takes up its abode in a family, there is no means of getting rid of it. So long as it is supplied at intervals with its favourite food, the family prospers and grows rich; but, when it feels the want of blood, sickness breaks out and misfortunes become frequent. Some human being is then murdered, and the hair, the tips of the fingers, and a little blood from the nostrils are taken and offered to the thlen. The belief is that the demon appears in the form of a snake and devours the body of the victim, which is materialized from the portions thus offered. Murders due to the prevalence of this superstition still occasionally come to light.

This idea of a family-spirit that needs human blood and affiliets the family with nisfortune if its craving is not satisfied exists also in other parts of India, and is believed to have been the cause of a murder committed in the year 1903 in Chotă Năgpur. The victim, a boy of 12, was found lying with his throat cut, and some grains of uncooked rice were seen in the wound, showing that he, like animals destined for sacrifice, had been made to swallow rice immediately before he was killed. The murder had apparently been committed at a shrine of kälir, where the body was found. If so, the case may mark a transition stage between the entirely non-Aryan practice of the Khāsis and the rites laid down in the Kālikā Purāṇa.

4. Sacrifices by Dravidian tribes. - Human sacrifices were once very common among the Dravidian tribes of the Chota Nagpur platean. With the Khonds they were so frequent and notorious in the early days of British rule that officers were deputed by Government to investigate the facts with a view to preventive action, and we have in their reports a full account of the practice as it obtained among the members of this tribe. Hnman beings were offered up by them to Tari Pennn, the earth-goddess, to avert misfortune and disease, to obtain success in war, and especially to ensure good crops. The victim, or meriah, was acceptable to the goddess only if he had been purchased (usually from the Pans, a weaving and criminal tribe, who procured children for the purpose from the plains), or was the son of a victim, or had been dedicated as a child by his father. Khonds in distress sometimes sold their children for victims, 'considering the beatification of their souls certain, and their death, for the beatification of mankind, the most honourable possible.' The victims were often kept for years before they were sacrificed. They were regarded as consecrated beings, and were treated with extreme affection and deference. They were commonly sacrificed about the time when the chief crop was sown. On

the day before the ceremony, the victim was dressed in a new garment and led with music and dancing to the sacred grove, where he was tied to a post, anointed with oil, ghī(clarified butter), and turmeric, and adorned with flowers. 'A species of reverence which it is not easy to distinguish from adoration? was paid to him throughout the day. The crowd danced round the post to music, and, addressing the earth, said: 'O goddess, we offer this sacrifice to you; give us good crops, seasons, and health.'
The orgies were kept up till noon next day, when
the victim was again anointed and taken in procession round the village. On this occasion, as on the previous day, there was a great struggle to get some relic from his person, such as a lock of his hair, a particle of the turmeric paste, or a drop of his spittle. He was then usually strangled in the cleft of a green branch, or tied to the trunk of a wooden clephant which was made to revolve. The officiating priest (a Khond) first wounded the victim slightly with an axe, and the crowd then rushed at him and cut the flesh from the bones, leaving the head and bowels untouched. The flesh was carried off to the different villages, where part was offered to the earth-goddess, buried, and a libation of water poured over it, and the rest was divided among the householders. Each man buried his piece in his favourite field. The remains (head, bowels, and bones) were burned next day, with a sheep, on a funeral pyre. The ashes were scattered over the fields, laid as paste on the houses and granaries, or mixed with the new corn to preserve it from insects.

Our authorities represent the meriahs as victims offered to propitiate the earth-goddess; but Frazer points out that the flesh and ashes of the victim were evidently thought to possess 'a direct or

were evidently thought to possess 'a direct or intrinsic power of making the crops to grow, quite independent of the indirect efficacy which it [the sacrifice] might have as an offering to secure the good-will of the deity.' 1

Practices very similar to those of the Khonds have been noticed by Davis and Needham among various Mongoloid tribes in the Naga Hills and on the Patkoi. Sometimes the flesh is buried in the fields to ensure good crops, and sometimes the victim is tied up and burnt to death in the jungle which is to be cleared for the next very's crops. The same tribes also flesh is buried in the fields to ensure good crops, and sometimes the victim is tied up and burnt to death in the jungle which is to be cleared for the next year's crops. The same tribes also regard a human sacrifice as very efficacious in warding off disease or ensuring victory in battle. The victim may be a slave, a prisoner of war, or some one purchased for the purpose. Both sexes are equally suitable. In the North of the Upper Chindwin district in Burma it was formerly the custom to sacrifice boys and girls at a big festival in August in order to get good rice crops. The victims, who were usually small children, were purchased from the unadministered territory. A rope having been placed round his neck, the victim was taken to the houses of all the relatives of the purchaser. At each house a finger joint was cut off, and all persons in the house were smeared with the blood. They also licked the joint and rubbed it on the cooking tripod. The victim was then tied to a post in the middle of the village and killed by repeated stabs of a spear, the blood from each stab being caught in a hollow bamboo, to be used afterwards for smearing on the bodies of the purchaser's relatives. The entrails were then taken out and the flesh removed from the bones, and the whole was put in a basket and set on a platform near by as an offering to the god. After the blood had been smeared on the purchaser and his relatives, who danced and wept meanwhile, the basket and its contents were thrown into the jungle.<sup>2</sup>

Among other Dravidian tribes who immolated

Among other Dravidian tribes who immolated human beings may be mentioned the Bhumij, who kidnapped children and sacrificed them at the shrine of their goddess Rankini. The Bhuiyās had a goddess named Thākurāni Māi, to whom similar sacrifices were offered; in 1868 an obnoxious official was slain by them, and his head offered to this deity. During the rising of the Mundas in 1900 a constable was killed, and it is said that his head was cut off, and his brains offered as a sacrifice to the local demons. The Bhogtas of Bhauñrpahar formerly offered up a human being, at stated intervals, to the bees which infest the rocks there,

1 GB3, pt. v. vol. i, p. 250.

2 G. E. R. Grant Brown, 'Human Sacrifices near the Upper Chindwin,' in Journal of the Burma Research Society, vol. i.

and to which supernatural powers are attributed. To this day the local aborigines will not pass the palace of a certain Rājā at night, owing to the survival of the belief that travellers are liable to be caught for sacrifice. The Banjāras, or pack bullock drivers, were once much addicted to human sacrifices. Before starting on a journey they used to bury a child in the ground np to the shoulders, and then drive their bullocks over it. Sometimes, in order to cure an illness or obtain some desired end, they decapitated a victim with one stroke of

a sword and sprinkled its blood over an idol.
5. Head-hunting.—Like the Dayaks of Borneo, the Garos and many tribes of Nagas were formerly head-hunters; and they often made raids on each other solely in order to obtain heads, which were brought home in triumph to the village and hung up on a tree there. Among the Angami Nagas a man was not allowed to put on the full insignia of a warrior until he had taken a life. It was not necessary for the victim to be a man killed in battle; a child or an old woman speared from an ambush served the purpose equally well. The practice has been put down in British territory, but it is still in vogue among the independent tribes on the frontier. Its origin is perhaps due to the belief that persons whose heads are taken become slaves of the captor in his future life.

The Ahoms often piled up in a heap the heads of enemies killed in or after a battle, or buried them under the steps of their king's palace. But in their case no religious motive appears to have been involved; it was merely a barbarous method

of exulting over their defeated enemies.

6. Sacrifices to earth- and river-demons, etc.— There is a superstition current throughout India that buried treasure becomes the property of demons, and that it is most hazardous to search for or remove it unless the demons have first been mollified with blood. In Southern India human sacrifices are deemed most suitable for this purpose, and the demons are believed to have a special partiality for the blood of a pregnant woman; but nowadays they have to be satisfied with that of a buffalo, a goat, or even a fowl. Rivers also are often thought to be inhabited by demons. It is commonly believed that a bridge over a big or fastflowing river will not stand until the river spirit has been appeased by the offering of human blood. Captain Clive, writing in 1828, says that the Rāna of Mewār, before crossing the Mahī river, invariably caused an individual from a particular tribe to be sacrificed, his throat being cut and his body thrown into the river. There is a wide-spread thrown into the river. There is a wide-spread superstition that large buildings require the burial of human beings in the foundations to make them safe. When important public works are in progress, rumours are still frequently spread and widely believed that lives are needed for this purpose, and that persons found wandering abroad at night are in danger of being taken as victims. A few years ago a girl was killed under the orders of a local landholder, and buried under an embankment which had given way several times, in order to render it immune from further injury by gods or demons. About the year 1780, when the gates of the city of Tavoy in Burma were erected, a criminal was put into each post-hole, and the post was thrust down npon him, so that his blood gushed np at the sides. He was supposed to become a spirit that would hover about the place, inflicting evil on all who came near, thereby contributing to the defence of the town.

There is a very general belief in the efficacy of human blood to produce any desired result. In Sibsāgar in 1854 a man decapitated the young son of a neighbour and drank his blood, in order to effect the recovery of his own child, who was ill

with fever. A similar act was committed in Mnzaffarnagar in 1870 by a childless woman, who hoped thereby to obtain a son. In the same year, at the instigation of a Hindu conjuror, a Musalman butcher, who had lost his child, killed a neighbour's bntcher, who had lost his child, and washed his wife in its blood, in order child, and washed his wife in its blood, in order than future children might he bealthy. Three that her future children might he bealthy. Three similar cases occurred in 1909, one in the United Provinces and two in the Nasik district of Bomhay.

7. Killing the king.—In The Golden Bough it is shown that primitive races in different parts of the world have a practice of killing their king. Among these races the king was believed by his subjects to be endowed with supernatural powers, and their welfare was dependent on his preserving these powers unimpaired. It was therefore the custom to kill him, or make him commit suicide, so that his soul might be transferred to a vigorons snceessor before he grew feeble from old age. A eustom of this kind once existed in Calicut, where the zamorin, or king, was formerly obliged to cut his throat in public at the end of a twelve years' reign. But by the 17th cent. the rule bad been modified. At the end of the twelve years a great feast was given, at which any guest who was so minded was at liherty to endeavour to kill the king. If he sneeeded, the crown would be his reward; but, as the king was surrounded by his guards, the chances of success were very small. The old Ahom custom which required the king at his ecronation to slay a man was possibly a survival of the same class of ideas, the victim being

taken as a substitute for the previous monarch.
8. Religious suicide. — The idea of religious suicide, i.e. of sacrificing oncself, is by no means unknown to the Hindus. We have already seen how, in the north-east of India, people sometimes offered themselves as victims at the shrine of Kālī. There is an island in the Narbada river in the Central Provinces where annually, until 1824, devotees were induced to throw themselves from a height on to some rocks which were thought to bo the abode of Kāl Bhairaya, the consort of Kālī Devī, who fed on human flesh.<sup>2</sup> Expressions occur in various religious books which countenance the practice of snieide, and rules are laid down for the rite. It was still quite common in the early part of last eentury. It was resorted to mainly hy persons who suffered from great poverty or painful and incurable disease. It was thought that, if a man drowned himself in a sacred river, such as the Ganges, especially at some peculiarly sacred spot, such as Allahabad, Triheni, or Sagar Island, he would thereby acquire merit that would redound to his advantage in his next birth. The rite used to be performed with much eremony. The man who was tired of life made the prescribed ablations and repeated certain mantras, and then sprang from a boat, or waded out of his depth, with earthen vessels tied to his limbs, which dragged him down when they filled with water. It was considered anspicious if a crocodile carried him off hefore he anspicious if a croeodile carried him off hefore he died from drowning. Another favorrite method of ending life was by throwing oneself heneath tho wheels of the hnge car on which the image Jagannäth at Puri is dragged once a year from the temple in which it is usually kept to a garden house about a mile away. Sick people, if the astrologer has predicted their death, are often taken to die on the banks of a sacred river. In former times, if death were long in coming, they frequently starved or drowned themselves; and frequently starved or drowned themselves; and, if at the last their resolution failed them, their relatives took care that they did not draw hack.

Satī.—But the most common and best known form of religions snicide was that, commonly known as satī, of widows who allowed themselves to be burnt to death on the funeral pyres of their husbands. Such suicides were frequent among all the high eastes, and were especially common in the families of Rājput chiefs. In many cases the act was entirely voluntary, but sometimes the unfortunate widow was subjected to a good deal of pressnre before she could be induced to ascend the pyre. Satī was prohibited by law in British territory in tho year 1829; and the example thus set was followed some years later by the rulers of the Native States. Isolated cases, however, still sometimes occur. In the year 1911 a Hindu lady, whose husband was on the point of death, soaked her elothes in kerosene oil and, setting light to them, burnt herself to death. Her act was applauded as that of a devoted wife by many Hindus, even among the educated classes. How this practice came into vogue it is difficult to say. There is no mention of it in the Vedas; but, from the belief that the wife who thus immolated herself accompanied her linsband to the other world, it may have arisen from the same class of ideas which led the Aloms to hury their slaves alive in the tembs of their kings and great nohles, and the Khongi Nagas to decapi-tate a man and inter his head with that of a deceased chief. Certain Central India chiefs used to slay men at their predecessors' obsequies. In the southern kingdom of Vijayanagar, royal funerals were the occasion for wholesale holocausts of women.

10. Offering one's own blood.—In conclusion, mention may be made of the practice of offering one's own blood to Käll. This is referred to in the Kālikā Purāņa as an acceptable way of propitiating the goddess, and it is still common among Hindn women. When a busband or a son is dangerously ill, a vow is made that, on the recovery of the patient, the goddess will be propitiated with human blood. The vow is fulfilled either at the next Durgā Pujā, or at once in some temple of Kāli. The wife or mother, after performing certain eoremonics, draws a few drops of blood from her hreast with a nail-eutter, and offers them to the

goddess.

HUMAN SACRIFICE (Iranian).—I. Early Iranians and Avestan people.—The prevalence of the custom of sacrificing human beings to the gods is so fully and incontrovertibly attested among practically all the other Indo-Enropean peoples, as are naturally predisposed to look for clear and unmistakable indications of its existence among the Iranians. In point of fact, however, these indications are so few and inconclusive that the practice of human sacrifico bas been confidently declared never to have been in voguo among the Persians. Whether the possession of earlier records would have exhibited the Iranians in line 1 Several more similar cases have occurred since this article

<sup>&</sup>lt;sup>1</sup> A New Account of the East Indies, by Captain Alex. Hamilton, who travelled in India from 1633 to 1723, reprinted in Pinkerton's Voyages and Travels (London, 1811), viii. 374. <sup>2</sup> PNQ ii. 118.

was written.

3 'The Persians were perhaps the only nation in ancient times who did not indulge in human sacrifices' (Rājendralāla Mitra, 'On Human Sacrifices in Ancient India,' JASBe xlv. (Calcutta, 1876) 83.

with the other Indo-European races in this matter is a question that does not admit of a categorical answer. Schrader, speaking of the Aryans (i.e. Indo Europeans) generally, says:

'If, as is little likely to be doubted, offerings were made to heaven in the primitive period . . . then human sacrifice must have taken a prominent place amongst them.'

Others, with much historical justification, maintain that no general principle can be laid down as to the point of time and the order in which human and animal sacrifices occur in the religious development of nations (see art. Animals, vol. i. p. 498 f.; also art. 'Sacrifice,' in  $EBr^{11}$ , by the same author). Moreover, among the Hindus, the nearest ethnological relations of the Iranians, the prevalence of human sacrifices is in inverse ratio to the antiquity of the period we may be considering. Of its vogue in the earliest Vedic times we possess only the indications contained in the Sunahsepa hymns of the Rig Sainhitā (i. 24-30), which, in all probability, are to be regarded as pointing to a real and not a merely symbolical sacrifice (see Rajendralala Mitra, op. cit.). The Avesta, on the other hand—even its earliest portions—contains no suggestion of that custom as having been practised at any time. What little bearing on this subject the evidence of the Avesta possesses tends to confirm our surmise that human sacrifices were unknown to the Avestan and pre-Avestan people of Iran. The most usual victims in the human sacrifices of most nations were prisoners of war. But these, we have reason to believe, were treated with great clemency by the Avestan people.

As Geiger 2 says:

'Captives taken in war were kept by their conquerors as servants and slaves. As such, they formed, I believe, part of the household of the Mazdayasnians, where they seem to have been treated kindly and humanely.' And again, 'Slaves were evidently regarded as members of the family, and their possession very highly valued.'

It should, perhaps, be remembered that the above is a description of the social life of the eastern Iranians in particular, whose practices as well as their creed may have differed somewhat from those

of their more westerly kinsmen.

2. The Achæmenians and the custom of human sacrifice. — Herodotus and some later writers attribute isolated instances of human sacrifice to at least three of the Achæmenian kings. Each of these cases must be considered separately. the first place, when Sardis, the capital of the kingdom of Lydia, fell (in 546 B.C.) into the hands of the Persians, Cyrus, according to the formula of Herodotus, sissued orders to erect a great pyre and to place Crossus, the captive king, with formula vouths. on the pile to be burnt. Later, of the Persians, Cyrus, according to the account fonrteen youths, on the pile to be burnt. however, he relented, and a shower of rain extinguished the flames, and thus Crosus was spared. This version of the story had always presented two great difficulties to its acceptance. The first and more formidable was that of reconciling this incident with Cyrus's otherwise justly enjoyed fame for clemency to his prisoners in war, and no adequate reason seemed to have been present for any departure on this occasion from his usual attitude and practice. Further, there was the less formidable, perhaps, yet real objection that Cyrus, as a Zoroastrian or true Persian, could not have ordered the burning of Cræsus. The light which ordered the burning of Crœsus. The light which recent researches have thrown upon Cyrus's religious attitude has tended to some extent to remove the latter difficulty. Nevertheless, the story as told by Herodotus did not easily commend itself to

1 Prehistoric Antiquities of the Aryan Peoples, tr. Jevons, London, 1890, p. 421; see also art. 'Opler,' in Schrader, Real-lexikon d. indogerm. Altertumskunde, Strassburg, 1901.

3 Herod. i. 86 ff.; also Nicolaus of Damascus, frag. 61 (Müller, FHG iii. 406); Lucian, Gallus, 23.

the general acceptance. The recently discovered poems of Bacchylides (born 507 B.C.) yielded another version of the story of Cræsus, earlier in date than that of the historian and also free from its objec-In the poem, instead of being condemned to die by his conqueror, Crœsus elects to perish in the flames of a pyre of his own erection, rather than submit to the indignity of enslavement to a foreign foe. The version of Bacchylides receives striking corroboration from a red-figured Greek vase 2 of the late 6th or early 5th cent. B.C. preserved in the Louvre. The vase shows Crosus enthroned and crowned, clad in his kingly robes, holding his sceptre with his left hand, and solemnly pouring a libation with his right. It is agreed by all that his attitude is in every way suggestive of the voluntariness of the act of self-immolation, and confirms Bacchylides' version of the story. It seems, therefore, that the charge of human sacrifice in the case of Cyrus must be waived. Nor does it seem possible to regard the instance given by Herodotus of the action of Cambyses as an example of human sacrifice.

'At another time,' says the historian, 'he took twelve of the noblest Persians, and, without bringing any charge worthy of death against them, buried them all up to the neck.'

Even Herodotus himself adduces this incident as an example of the king's mad ferocity. The act is in no way religiously motived.

Only two more instances are recorded by Herodotus, one of which is attributed to Xerxes, the

other to his wife Amestris (vii. 114).

'When they learnt that the name of the place was "The Nine Ways," they took nine youths of the land and as many of their maidens and huried them alive on the spot. Burying alive is a Persian custom. I have heard that Amestris, the wife of Xerxes, in her old age buried alive seven pairs of Persian youths, sons of illustrious men, as a thank-offering to the god who is supposed to dwell underneath the earth.'

The latter statement does not easily fit into the scheme of Persian cosmogony, and probably, as Rawlinson (ad loc.) says, Herodotus here speaks as a Greek. Now, although the religious motive is not quite so remote in these two instances as in the case of Cambyses, it will probably still be felt that we have here but slender basis upon which to found our belief in the Persian custom of human sacrifice (see art. ACHEMENIANS). Even granting that we are dealing with true history, it seems more probable that these older instances of 'tree-planting' were prompted by human vindictiveness rather than by a desire to observe a religious custom and propitiate a god; for the custom of burying alive remained to modern times in Persia as one of the most cruel forms of torture (see Niebuhr, Vorträge, Berlin, 1847, i. 155).

3. Human sacrifice as practised by the Scythians.—Although all the other branches of the Iranian race, so far as our records show, were singularly free from the habit of sacrificing human beings, the Scythians, who were perhaps only mainly Iranian,

practised that custom in very extreme forms.

It was their custom to sacrifice one out of every hundred prisoners of war. The method of immo-lation, according to Herodotus, was as follows. A large platform made of brushwork was erected, upon the top of which was set a sword or scimitar, the image of Ares. Libations of wine were poured the image of Ares. Libations of wine were poured over the victims' heads, after which they were slaughtered over a vessel. Then the blood was taken to the top of the pile and poured upon the scimitar. While this was proceeding at the top of the platform, below, by its side, the right hands and arms of the slaughtered men were cut off and tossed up into the air, the whole being left to disintegrate and decay where they might chance to have fallen. Another

2 See reproduction in JHS xviii. (London, 1893) 268.

3 iii. 35.

instance, in which, perhaps, the religious motive is more remote, is the method by which false diviners were immolated. A waggon is loaded with brushword, and oxen are yoked to it. Then the sooth-sayers, with their feet tied together, their hands bound behind their backs, and their mouths gagged, are thrust into the midst of the brush-wood. Finally the wood is ignited and the oxen are made to rush off with their burning load until they themselves are caught in the conflagration and all are consumed together.1

The only other instance that need be mentioned here bears more clearly the character of a religious sacrifice, namely, the ceremonies associated with a king's funeral. After the long march of the pro-cession from tribe to tribe, as described by Herodotns,2 and the arrival at the royal tombs, the body of the dead king, stretched on a mattress, is laid in the grave prepared for it. In the open space around the body of the king they bury one of his concu-bines, first killing her by strangling, and also his cupbearer, his cook, his groom, his lacquey, his messenger, as well as some horses and other possessions. When a year is gone, further ceremonies take place. Fifty of the best of the late king's attendants—all native Scythians—are taken and strangled. Then as many of the king's finest After a somewhat barbarous horses are slain. process of preparation, the strangled youths are mounted upon the slaughtered horses and arranged in a circle around the king's tomb. These are the most important instances of the forms of human sacrifice as practised by the Scythians.

LITERATURE.—The works dealing most fully and directly with the various parts of our subject have already heen indicated. On the Crossus story, see also J. G. Frazer, Adonis, Attis, Osirie? London, 1907, pp. 141 fl., 146 fl.; see also p. 4021. on the oustom of hurying alive.

E. EDWARDS.

HUMAN SACRIFICE (Japanese and Korean).

-1. Japanese.—The most ancient Japanese documents that have come down to us were written at a time (8th cent.) when the memory of human sacrifices was still green. One of the most important

ments that have come down to us were written at a time (8th cent.) when the memory of human sacrifices was still green. One of the most important myths of the Kojiki is conceived as follows:

'Having heen expelled (from Hcaven, after his crimes against the Sungoddess), Susa-no-wo-no-mikoto [His-Swift-Impetuous-Male-Augustness, the god of the Ocean and the Storm, who appears here in the aspect of a human hero] descended to a place called Torl-kami at the head-waters of the River Hi in the land of Idzumo. At this time some chopsticks came floating down the stream. So His-Swift-Impetuous-Male-Angustness, thinking that there must be people at the head-waters of the river, went up it in quest of them, when he came upon an old man and an old woman,—two of them,—who had a young girl hetween them, and were weeping. Then he deigned to ask: "Who are ye?" So the old man replied, saying: "I am an Earthly Deity, child of Oho-yama-tsu-mi-no-kami [the Great-Mountain's God]. I am called by the name of Ashi-nadzuchi, my wife is called by the name of Te-nadzu-chi, and my daughter is called by the name of Te-nadzu-chi, and my daughter is called by the name of Te-nadzu-chi, and my daughter is called by the name of Te-nadzu-chi, and my daughter is called by the name of Te-nadzu-chi, and my daughter is called by the name of Te-nadzu-chi, and my daughter is called by the name of Te-nadzu-chi, and my daughter is called by the name of Te-nadzu-chi, and my daughter is called by the name of Te-nadzu-chi, and my daughter is called by the name of Te-nadzu-chi, and my daughter is called by the name of Te-nadzu-chi, and my daughter is called by the name of Te-nadzu-chi and time.

'Princess'; nada, no donbt for Inada, a place-name meaning 'rice-field'; kushi, in the sense of 'comb' here, as the story that follows shows]." Again he asked: "What is the cause of your crying?" The old man answered, saying: "I had originally eight young girls as daughters. But the eight-forked serpent of lioshi ia namie of the north-west district occupied by the A

fence make eight gates, at each gate tie together eight platforms, on each platform put a liquor-vat, and into each vat pour the eight-foid refined liquor, and wait." So, as they waited after having thus prepared everything in accordance with his hidding, the eight-forked serpent came truly as the old man had said, and immediately dipped a head into each vat, and drank the liquor. Thereupon it was intoxicated with drinking, and all the heads lay down and slept. Then His-Swift-Impetuous-Male-Augustness drew the ten-grasp sahre that was augustly girded on him, and cut the eerpent in pieces, so that the River Hi flowed on changed into a river of blood. So when he cut the middle tall, the edge of his august sword hroke. Then, thinking it strange, he thrust into and split the flesh with the point of his august sword and looked, and there was a great sword within. So he took this great sword, and, thinking it a strange thing, he respectfully informed the Heaven-Shining-Great-August-Deity. This is the Kusa-nagi-no-tachi [Herb-Quelling-Great-Sword)' (Eqiiki, tr. Chamberlain, 2nd ed., Tokyo, 1900, pp. 71-73; cf. Nihongi, tr. Aston, London, 1896, l. 62-58).

This is clearly analogous to the legend of Perseus

pp. 71-78; cf. Ainongi, tr. Aston, London, Los, and This is clearly analogous to the legend of Perseus rescuing Andromeda from a sea-monster who was about to devour her. It seems to have lost, at the time of its redaction, what was probably its original meaning, and, before becoming a simple epic narrative, to have been meant to recall the abolition of human sacrifices offered to theriomorphic deities, especially water-spirits conceived in animal form (see E. S. Hartland, LP iii. ch. xviii.; Marillier, in RHR xxxiv. [1896] 401 f.). The description of the monster of Koshi, in fact, seems, as already observed by Aston (Shinto, London, 1905, p. 105), to be really a poetical representation of the river itself, with its serpentine course, its numerous tributaries, its wooded banks, and its deep waters, devourers of human beings. Even to-day popular superstition believes in the existence of monsters called kappa which haunt the mouths of rivers by preference, and kill human beings, just as the inhabitants of the thick mountain-forests fear the uwabami (legendary boas believed to devour women and children). It was much more natural for such ideas to be pregalant among the privitive for such ideas to be prevalent among the primitive Japanese, who, like so many other peoples (see Waitz-Gerland, Anthropologic der Naturvölker, Leipzig, 1860-77, iii. 198; A. Réville, Religions des peuples non-civilisés, Paris, 1883, i. 175 f., 225, 247, etc.), endowed the spirit of the waters with serpent form, serpents often having aquatic habits, and attributed to its poisonous breath the deadly influences manifested in certain epidemics. Hence the conception of the mizu-chi, 'water-elder,' i.e. 'water-god,' of which the terrible dragon of Koshi is only a representation enlarged upon by the imagination of myth-makers.

Another story helps to confirm this interpreta-tion by giving us a positive example of these sacrifices to the river-deities. It is telling of an event which happened, according to the Nihongi, in the year A.D. 323:

event which happened, according to the Northern river, in the year A.D. 323:

'In order to prevent the overflowing of the Northern river, the Mamuta embankment was constructed. At this time there were two parts of the construction which gave way and could not he etopped up. Then the Emperor had a dream, in which he was admonished by a God, saying: "There is a man of Mussahi named Koha-kuhi, and a man of Kahachi named Koronio-no-ko, the Muraji of Mamuta. Let these two men he saerificed to the River-God, and thou wilt surely he enabled to close the gaps." So he sought for these two men, and, having found them, saerificed them to the River-God. Hereupon Koha-kuhi wept and lamented, and, plunging into the water, died. So that embankment was completed. Koromo-no-ko, however, took two whole calabashes, and, standing over the water which could not be dammed, plunged the two calabashes into the mid-stream and prayed, saying: "O thou River-God, who hast sent the curse, to remove which I have now come hither as a sacrifice! If thou dost persist in thy desire to have me, sink these calabashes and let them not rise to the surface. Then shall I know that thou art a true God, and will enter the water of my own accord. But if thou canst not sink the calabashes, I shall, of course, know that thou art a false God, for whom why should I spend my life in vain?" Hereupon a whirlpool arose suddenly which drew with it the calabashes, dancing on the waves, would not sink, and flosted far away over the wide waters. In this way that embankment was completed, although Koromo-no-ko did not die. Accordingly, Koromo-no-ko's cleverness saved his life. Therefore the men of that time gave a name to these two places, calling them "Koha-kuhl's Gap" and "Koromo-no-ko's Gap" (Nihongi, i. 2811.).

What is the significance of the calabashes employed here? Is it a simple test, eleverly based on the difficulty that the god would have in sinking the light floating gourds? Or may we have at the same time the idea of the magic virtue attributed to calabashes, which were ancient India as an antidote to serpent-bites? (see V. Henry, La Magie dans l'Inde antique, Paris, 1904, p. 203; and cf. the willow-tree gourds used as amulets in China [J. J. M. de Groot, Les Fêtes annuelles à Emoui, Paris, 1887, p. 328 f.]). Whatever may be the answer to these questions, we have in this story a case of human sacrifice, fully accomplished for one of the victims, and escaped by the other only through his personal ingenuity. With this story we may connect the following, given under A.D. 379 by the *Nihongi*:

given under A.D. 379 by the Nihongi:

'This year, at a fork of the River Kahashima, in the central division of the Province of Kibi, there was a great water-snake which harassed the people. Now when travellers were passing that place on their journey, they were surely affected by its poison, so that many died. Hercupon Agata-mori [District-warden], the ancestor of the Omi of Kasa, a man of flerce temper and of great bodily strength, stood over the pool of the river-fork and flung into the water three whole calabashes, saying: "Thou art continually belching up poison and therewithal plaguing travellers. I will kill thee, thou water-snake. If thou canst sink these calabashes, then will I take myself away; but if thou canst not sink them, then will I cut up thy body." Now the water-snake changed itself into a deer and tried to draw down the calabashes, but the calabashes would not sink. So with upraised sword he entered the water and slew the water-snake. He further sought out the water-snake's fellows. Now the trihe of all the water-snakes filled a cave in the bottom of the pool. He slew them every one, and the water of the river became changed to hlood. Therefore that water was called "The pool of Agata-mori" (Nihongi, i, 293 I.).

These two stories, which the Nihongi places,

These two stories, which the Nikongi places, rightly or wrongly, in the 4th cent., but which in any case are of a much later date than the myth of the scrpent of Koshi, already display a certain scepticism in regard to the river-gods and the utility of appearing them by the sacrifice of human life. They establish, nevertheless, the early existence of the custom of whose abolition the legend of the Japanese Perseus gives us a symbolical ac-eount—a custom probably replaced later by animal sacrifices and finally falling into complete disuse under the influence of Buddhism. A later text, referring to A.D. 642, when there was a great drought, says:

"The Ministers conversed with one another, saying: "In accordance with the teachings of the village hafuri ['sacrificers,' priests of an inferior grade], there have been in some places horses and cattle killed as a sacrifice to the Gods of the various (Shinto) shrines, in others... prayers to the River-Gods. None of these practices have had hitherto any good result"; and consequently it is decided, on the motion of Sogn no Oho-omi, to have recourse to nothing else than Buddhist prayers in order to get rain' (Nihongi, ii. 174 f.).

The substitution of animal victims for human victims is confirmed by a curious myth in a work of the beginning of the 13th cent., the Uji Shui Monogatari ('Tales forming a sequel to the Uji Collection, a similar collection which appeared in the 11th century). Here we find a local survival, in the circuit of Sanyōdō (on the Inland Sea), of a serpent-god and a monkey-god to whom a maiden was sacrificed every year; then, thanks to the mythical intervention of a noble hero, 'the Knight of Azuma,' the suppression of this custom, and the decision made by the priests of the temple that in future they would sacrifice only boars and deer (see 'Some Tales from the Uji Shui Monogatari,' in TASJ xxviii. [1900] 41-45). Similar substitutions might be cited among other peoples, from the time of ancient Greece, where the annual immediation of a rought to Discover was realized. immolation of a youth to Dionysos was replaced by the sacrifice of a goat at the request of the inhabitants of Potniæ (Pausanias, ix. 8. 1), to the 19th cent., when the British Government inter-vened to substitute a goat for the child immolated

a man clothed in boar's skin (see Goblet d'Alviella, Les Rites de la moisson, in RHR xxxviii. [1898] 5). In Japan itself we see subsisting, on the one hand, the actual hostiæ animales (e.g. in the temple of Suwamyōjin, in Shinano, frequent offerings of about seventy-five boars and deer), and, on the other hand, the old human sacrifice kept up in the form of a ritual imitation (e.g. in the temple of Sakatomyōjin, in Kazusa, after drawing lots among the faithful, the chosen victim is placed on a large stall, and the priest, armed with a great chopping-knife, makes a pretence of cutting him np with three blows; see Katō Setsndō, in the Chuō Kōron [Japan Mail] for 4th July 1903).

In one of the stories from the Nihongi (i. 281) we have seen human sacrifice employed to expedite the construction of an embankment. Men were the construction of an embankment. also sometimes buried alive in the foundations of a castle, a bridge, or an artificial island. They were called hito-bashira ('hnman pillars'). But the most interesting example of this order of customs is the burying alive of human beings in the graves of Emperors and princes—a custom which took its rise, according to the *Nihongi* (i. 213), at the funeral of prince Yamato-hiko, but which is certainly more ancient and becomes particularly connected with this funeral only, as Motoori very plausibly holds, by an unprecedented exaggeration of the number of victims which brought this abuse to a head, and led to its snppression at subsequent Imperial funerals. This important custom, its significance, and its abolition are treated in art. ANCESTOR-WORSHIP (Japanese). As far as we know at the present day, the haniwa (clay rings), circles of effigies of baked earth, which, according to the account of the Nihongi (i. 178 f.), took the place round the tomb of the row of men and horses place round the tomb of the row of men and horses originally buried alive, seem to have originated in Japan. The archæological discoveries of recent years have revealed them also in China (cf. 'Chinese' art.), in tombs of the Han dynasty (E. Chavannes, Mission archéologique dans la Chine septentrionale, Paris, 1910), and, in a rougher form, in tombs in Manchuria and the neighbourhood of Port Arthur (see artt. by Hamada Kosaku and Torii Ryuzō, in Kokka, Tokyo, 1910, 1911). It may be asked, then, Are the Japanese effigies not of continental origin, and has not the Nihongi, as of continental origin, and has not the Nihongi, as often happens, borrowed its account from some Chinese work? On the other side, however, we must not lose sight of the fact that the account of the Nihongi agrees with a passage of the Kojiki which is certainly gennine and anthentic, saying that in the time of the Great Empress Her Augustness Princess Hibasu [the same empress whose funeral, according to the Nihongi, put an end to linman sacrifices] the Ishi-ki-tsukuri (Stone-Coffin-Makers) were established, and also the Hanishi-be (Earthenware Masters' Clan) was established' The fact that human sacrifice, which (Kojiki, 247). had been suppressed, according to the Nihongi, in A.D. 3, must have been revived, according to a Chinese work (see TASJ xvi. [1888] pt. i. p. 59), at the death of the Empress Himeko in A.D. 247, only exemplifies the well-known inaccuracy of the concocted chronology of the Nihongi, and does not prove that the reform was never accomplished the redactors of the Nihongi simply placed it too early, as is the invariable custom of the Easterns, more concerned as they are with antiquity than with truth. Moreover, it is difficult to see from what Chinese work they could have drawn the account of a transformation which is exactly the opposite of the Chinese conception in this connexion, viz. that the offering of straw or wooden vened to substitute a goat for the child immolated every year by the Khonds; cf. also the pretended, and very characteristic, immolation, in Sweden, of lefting of substitution of living victims (J. Legge, Chinese Classics, Hongkong, 1861-72, 'Mencins,' p. 9). On the other hand, the

already been sacrificed at the tomb of a king of Silla when the custom of burying live victims was prohibited in this kingdom (ib. v. 5).

LITERATURE.—This is cited in the article.

MICHEL REVON. HUMAN SACRIFICE (Roman). — Human sacrifice implies the killing of a luman being in honour of a deity, as an act prescribed by religion and performed with due ceremonial. The religious requirement is based upon the idea that an enraged The anger of the deity craves for human life. deity, according to the beliefs of many peoples, is to be discerned in his sending war or pestilence involving great loss of life; thus the pestilence in the Greek camp before Troy was caused by the arrows of Apollo (II. i. 51). In such cases the community in ancient times tried to save itself by sacrificing one or more human beings (Verg. En. v. 815: 'unum pro multis dabitur caput'), and thus propitiating the divine wrath (propitiatory sacrifice). In the case where a particular individual was known to have sinned against, and thus to have brought upon himself the resentment of, a deity, he was sacrificed as an atonement, so that the deity's wrath should not fall upon others (expiatory sacrifice); thus the plague in Thebes was stayed as soon as the murderer of Laius was banished (Soph. Œd. Rex, 96 ff.). At a later stage we meet with more merciful rites, usually spoken of as commutations of human sacrifice; the com-munity, partly because it stands in need of men, and partly because it has become more humane in sentiment, endeavours to avoid the killing of men by changing either the mode or the victim of the oblation; it allows the victim to live, but exiles him (Œdipus), or, instead of making the offering originally demanded, it offers figures of men or animals; thus animals were sacrificed by the Greeks to Apollo (II. i. 447 f.). When in the expiatory sacrifice the act of killing is still retained, it loses its religious character, and becomes capital Thus human punishment in the secular sense. sacrifice may at length entirely disappear from the practice of a religion, and, as we must not summarily assign to all religions the same course of development, the modern investigator is confronted with the question whether a religion from which human sacrifice is absent may formerly have had the practice or not.

This doubt affects also the Roman religion. G. Wissowa (Religion u. Kultus d. Römer², p. 420 f.) denies that the Roman religion ever required human sacrifice, while others (cited by Wissowa, loc. cit.) assert that it did. It is certainly true that in the State religion, so far as history attests it to have been officially Roman, there is no evidence of the practice. From Cicero, pro Font. 31, and Cæsar, de Bell. Gall. vi. 16, where human sacrifice is referred to as something repulsive or abnormal, we may infer that it did not exist in the 1st cent. B.C., and the words of Livy (xxii. 57. 6), 'hostiis humanis, minime Romano sacro,' point in the same direction. Livy's reference certainly seems to clash with the fact that, according to a number of Christian writers in the Imperial period (Tatian, Or. ad Græos, 129; Minucius Felix, 30. 4; and others; cf. J. Marquardt, Röm. Staatsverwaltung, iii.², Leipzig, 1885, p. 297. 4), a man ('bestiarius' [Tert. Apol. 9]) was sacrificed to Juppiter Latiaris at the festival of the latter. W. Warde Fowler (The Religious Experience of the Roman People, London, 1911, p. 112. 31) is of opinion that this points to a practice of actual human sacrifice which had grown up under the influence of Oriental immolation and of the brutalizing slanghter in the arena. But, as this reference is an isolated one, it rather arouses suspicion, the more so because profane writers make no mention of the incident; J. Geffeken (Zwei

griech. Apologeten, Leipzig and Berlin, 1907, p. 66) and Wissowa (op. cit. 124) reject it as apocryphal. But it would be a mistake to regard it simply as a biased fabrication of Christian authors. The present writer is inclined rather to suppose that the celebrations of the Latiaris festival included the baiting of animals; that some writer whose works are now lost ironically described the hardly avoidable deaths of bestiarii as sacrifices to Juppiter; and that then the Christian writers mentioned above not unwillingly accepted the statement as fact.

The alleged human sacrifice at the Latiaris festival must, therefore, not be appealed to as proving the existence of the practice of human immolation in the Roman religion. But, on the other hand, the references of Cicero, Cæsar, and Livy, as cited above, furnish no evidence as to primitive times; and, in order to decide the question in relation to that earlier age, such rites and beliefs as may possibly be survivals of an ancient practice of human sacrifice (Wissowa, op. cit. 420) must be examined

in detail.

The Compitalia are a theme of particularly vigorous discussion (Samter, in ARW x. [1907] 374ff.; Wissowa, op. cit. 167); the present writer's own view will be given in what follows. It was the custom at that festival to hang up in the chapels of the Larcs as many human figures and as many balls respectively as there were freemen and slaves present—'ut vivis parcerent [Lares]' (Paul.-Fest. 239). Even if we regard the purpose of the ceremony as being correctly indicated in that ancient phrase, yet it would not be pertinent to apply the term 'commuted human sacrifice' to the rite. For this would imply that originally the whole household were actually sacrificed—an idea that cannot be entertained. All that the custom in question has in common with human sacrifice is its basis, viz. the belief that the gods have a desire for human life. Men seek to satisfy that desire in the secret possible ways that were the deity the easiest possible way; they present the deity with objects of no great value, which nevertheless, on some ground or other, are regarded as equivalent to a many life are the image (which on some ground or other, are regarded as equiva-lent to a man's life, as, e.g., his image (which primitive belief identified with the original; cf. O. Weinreich, Antike Heilungswunder [= Religions-geschichtl. Versuche u. Vorarbeiten, viii. 1], Giessen, 1909, p. 144), or a ball (a crude representation of the head, the seat of life). By a similar gift, viz-beans (on the relation of which to human life, cf. B. Wünsel. Das Frijhlingsfest der Insel Matta. R. Wünsch, Das Frühlingsfest der Insel Malta, Leipzig, 1902, p. 31), the paterfamilias, at the festival of the Lemuria, purchased deliverance from the attacks of the spirits of the dead (Ovid, Fasti, v. 438: 'his redimo meque meosque fabis'). In the ceremony of the Compitalia, therefore, the essential element was the offering of a vicarious gift to the Lares—who need not, however, be regarded on that account as ancestral spirits; the suspending of the sacrificial objects is not a residuum of a primitive practice of sacrificing men, but simply an indication that the gift now belongs to the recipient. The votive images were, in fact, suspended in the chapels of the Lares for the same reason as the shepherd suspends his dedicated flute from the sacred tree. What is true of the Compitalia holds good with respect to other two customs which have also been interpreted as cases of commuted human sacrifice. At the Saturnalia, people might buy clay figures (sigilla, sigillaria; Wissowa, op. cit. 206), 'quae homines pro se atque suis piaculum pro Dite Saturno facerent' (Macr. Sat. i. 11. 49); and at the Volcapalia the Romana chesaved the custom at the Volcanalia the Romans observed the custom of throwing living fishes into the fire (Wissowa, 229), likewise 'pro se' (Varro, de Ling. Lat. vi. 20; Fest. 238; on the connexion of the fish with the belief in the soul, cf. F. Böhm, de Symbolis

Pythagoreis, Berlin, 1905, p. 19). These two were vicarious gifts, and do not imply an ancient prac-

tice of human sacrifice.

The custom of the Caterva, again, has been connected by H. Usener (Kleine Schriften, iv. [Leipzig and Berlin, 1913] 252) with commuted human sacrifice. 'Caterva' was the name given to regular encounters between two quarters of the city (Usener, 435), and the blood spilt in them is snpposed by Usener to have been a surrogate for a primitive practice of immolating men. But here, too, another interpretation lies closer to our hands. The best-known instance of these conflicts is the annual battle between the Subura and the Via Sacra for possession of the skull of a horse that was sacrificed on the 15th of October (Festus, 178); the real purpose of the fight was to secure for a particular community a sacred object and the benefits associated with it. Other divisional battles, similarly, would be contests for possession of a sacred object; and here and there these conflicts were still kept up, even when a change in religious observance had deprived them of their proper motive.

On the other hand, it is probable that among the Romans the death penalty was originally an expiatory sacrifice performed with due ceremony. Plutarch (Rom. 22) makes mention of an old law enjoining τὸν ἀποδόμενον γυναῖκα θύεσθαι χθονίοις θεοῖς. The vestal virgin who had broken her vow of chastity was buried alive; the Pontifex Maximus accompanied her to the side of the grave, and uttered special prayers (Plut. Numa, 10); here we have a ritual sacrifice of the offender to the deity. The harvest-thief 'Cereri necatur' (Pliny, HN xviii. In later times, again, the sentence upon the criminal involved also his deliverance to the offended deity (Festus, 318: homo sacer is est quem popu-Ins iudicavit ob maleficium'; cf. also 'consecratio capitis' [Cic. pro Balbo, 33]; and the penal formula, 'sacer esto,' as, e.g., in Festus, 33, and Serv. Æn. vi. 609). Wissowa (op. cit. 388 f.) is of opinion that at first the State circula delivered this index that at first the State simply delivered this judgment, and left the transgressor to the vengeance of the deity, and that the law itself administered the actual penalty only in later times; in which case, of course, the penalty would have no connexion with human sacrifice. But it seems to the present writer—and it is also Mommsen's view (Röm. Strafrecht, Leipzig, 1899, p. 900 ff.)—more likely that the public execution of the death penalty is old, and implies a sacrifice. No one would venture to kill a creature which had become the property of a deity by consccratio, nnless he thought that he was thereby conveying it to its possessor. But, if the State conveys a living creature to a god by killing it, it performs virtually an act of sacrifice. Wissowa's objection that the sacrificial object mnst bo without blemish-as an offender, of course, could not be-applies not to the expiatory, but only to the propitiatory, sacrifice; nor, indeed, does it apply everywhere even to the latter, for we find that the Grecks offered criminals in propitiatory sacrifice (Samter, loc. cit. 375; A. Thomson, ARIV ix. [1906] 400).

A snrvival of human sacrifico among the Romans has also been found, and in all probability rightly, in the Ver sacrum. Like other Italian peoples, as, e.g., the Sabines (Strabo, v. 250) and the Rutuli (Serv. Æn. vii. 796), in times of great distress, the Romans, when at war with Hannibal, songht to procure a happy deliverance from troublo by promising to a deity all the domestio animals born in a single spring (Livy, xxii. 9. 7ff., xxxiii. 44. 1, xxxiv. 44. 1), and these were then duly sacrificed in fulfilment of the pledge. The form of the Italic Ver sacrum which, as we thus learn, obtained among the Romans was not the most ancient form.

Originally the dedication embraced also the human progeny; the children were allowed to grow up, and were then driven beyond the confines of their eountry (Strabo, loc. cit.; Festus, 321; Dion. Hal. Ant. Rom. i. 16). The ancients themselves interpreted this act of banishment as a mitigated form of the older practice of immolation (Paul.-Fest. 379)—a view rejected by Wissowa (p. 420. 5), who says: 'This expulsion or abandonment is rather the recognized method of performing the consecratio of living beings'; and he refers to Suet. Cas. 81, where he finds an instance corroborative of his opinion. The passage in question, however, merely shows that the consecratio of the living likewise prevailed in later times; it was not the natural form, else the Romans would have availed themselves of it in the Ver sacrum as well (Samter, loc. cit. 378). We must rather assume that originally, as the vow was a unity, so its fulfilment was also uniform. Originally, that is to say, human beings and animals alike were either sacrificed or else expelled from the country. But, as in the ritual of blood-offerings the tendency is usually towards a mitigation rather than towards an intensification of their severity (E. Mogk, ASG xxvii. [1909] 605), we must regard the immolation of human beings (as of other creatures) as the primordial form; and it was, therefore, probably in this form that the Romans observed the general practice of Italic tribes in ancient times. We cannot, indeed, trace the observance of the Sacred Spring in Rome before 217 B.C.; neverthcless, it is possible that about that time the Romans adopted it from their neighbours as something out of the common (it was settled after consulting the Sibylline Books [Livy, xxii. 9. 8]), and at once modified it to suit their own eircumstances.

In any case, it is attested by other data that the fundamental idea of propitiatory sacrifice—'unum pro multis dabitur caput'—prevailed among the Romans of the earlier age. The present writer would certainly not lay much stress upon the testimony of Livy, iv. 12. 11, according to which large numbers of people, with heads veiled, threw themselves into the Tiber during a time of famine; perlaps they did so without, as Stoll supposes (Roscher, i. 499), thinking of their act as a propitation, and simply committed suicide in sheer despair. The case of M. Curtins (362 B.C.; cf. F. Münzer, art. 'Curtius,' no. 7, in Pauly-Wissowa), however, is a different one. When a chasm had opened in the Forum, and was to be filled up only by receiving the most precious treasure of Rome, Curtins presented himself on horseback and in full armour, and, having prayed ('manus . . . ad deos manes porrigentem se devovisse' [Livy, vii. 6. 4]), leaped into the abyss. This is unmistakably a propitation, designed to avert the wrath of the gods, which had manifested itself in the portentum of the chasm, but it differs from human sacrifice in the fact of its having been a voluntary act. That in ancient times a human being was over sacrificed to the gods by the Roman State on like grounds but against his own will is possible, but is in-

capablo of proof.
Livy, in applying the word devovere to the sacrificial death of Curtius, shows us that he construcd it as a devotio (Wissowa, 384f.; Bouché-Leclercq, in Daremberg-Saglio, ii. 113 ff.; and esp. L. Deubner, in ARW viii. [1905], Beiheft, 66 ff., 79). Now the Roman general, in the stress of battle, 'devoted' himself, or else—what seems to be a commutation—a legionary (Livy, viii. 10. 11), to the gods in order to induce them to destroy the enemy's army. Denbner recognizes that the essential implication of this act was the devoting of the hostile army to the deities of the nader world, the act being rendered all the more effective by the

fact that the devotio involved the sacrifice of the general himself; by his prayer he linked the enemy with his own fate, so that, if he fell, the enemy would share his doom. But the general, in thus offering his own person, really proceeded upon the same motive as actuated M. Curtius. Hence the idea which gave rise to human sacrifice operates here too; even the religious form is not wantingthe rubric of the devotio is given by Livy (viii. 9. 4 ff.; on his sources, cf. E. Kornemann, Der Priestercodex in der Regia, Tübingen, 1912, p. 23 ff.). Nevertheless, the sacrifice in this case too is quite voluntary, and there is nothing to warrant the hypothesis that at an earlier period the general was actually sacrificed by priests. In the case where a legionary was devoted, and did not fall in battle, he was required to bury a figure in the earth (Livy, viii. 10. 11); and here again the image serves as a substitute for the living man (Deubner, loc. cit. 81). This substitution may have been allowed even when the custom of devoting a legionary was first introduced; certainly that custom seems to be of later origin than the devotio of the general (see above), so that it is not necessary to assume that originally the legionary was

ever actually sacrificed at all.

Thus the Ver sacrum and the death-penalty seem to indicate that human sacrifice had a place in the primitive Roman religion, while the devotio shows that self-immolation was not unknown in it. But, apart from such national institutions, we find in Rome actual cases of human sacrifice—or of indubitable substitutes therefor—only in so far as they had been introduced under foreign influence. These cases, moreover, are so numerous that we can hardly help thinking that the practice could never have gained so firm a footing if it had been radically obnoxious to Roman sentiment.

The first people known to have exercised a vast influence upon the religious rites of the Romans were the Etruscans. It was that people who furnished the Romans with, inter alia, the art of divining by lightning in a highly developed form (C. O. Thulin, Die etruskische Disciplin, i. Blitzlehre, Göteburg [Göteb. Högs. Aarsk. xi., 1906], esp. p. 99). Now, Plutarch (Numa, 15) speaks of a Roman propitiation of lightning, which was performed with onions, hair, and fishes, and which both he and Ovid (Fasti, iii. 333 ff.) interpret as a commuted human sacrifice. It is natural to suppose that this rite, together with other details of divination by lightning, was borrowed from the Etruscans. Then, again, in the triumphs of Roman generals, it was customary to put to death the captured commanders of the enemy (Cic. Vcrr. v. 77). This practice is regarded by G. Beseler (Hermes, xliv. [1909] 352) as originally a human sacrifice: the victorious general, on his return home, sacrifices the best thing among his spoils. Beseler also suggests that the triumph itself, as an institution, may possibly have been derived from the Etruscans (cf. Aust, in Roscher, ii. 633). From Etruria also, according to Nicolaus of Damascus (Ath. iv. 153 f., in FHG iii. 417), came the gladiatorial shows (Preller, Rôm. Mythologie, ii. 3, Berlin, 1883, p. 97), which Varro (ap. Serv. Æn. iii. 67; cf. Wissowa, op. cit. 466, n. 3) believed to be commutations of luman sacrifice. Originally the departed were supposed to need attendance in the other world; hence Achilles slew twelve Trojan youths at the funeral pyre of Patroclus (N. xxiii. 175). A later age substituted combat for slaughter, and thus at the same time did something to gratify the popular liking for funeral processions. Gladiatorial shows on a large scale were first celebrated in Rome in 264 B.C. (Val. Max. ii. 4. 7; Wissowa, loc. cit.).

But the Etruscan influence upon the Romans!

was less profound than the influence of the Greeks. Plutarch (Rom. 21) states that at the festival of the Lupercalia it was the custom to streak the brows of two youths with blood-covered knives, and then to wipe them with wool, the youths being required thereupon to laugh. In this act of streaking the brow with blood many scholars have recognized a residuum of an ancient Roman practice of human sacrifice. But it will be better not to lay stress upon this. Deubner (ARW xiii. [1910] 502) recognizes here a cathartic custom of Greek origin. To a Greek source is certainly to be assigned the ceremony of the Argei, of which Wissowa, following Diels (Sibyllinische Blätter, Berlin, 1890, p. 43 f.), has given the right explanation (Pauly-Wissowa, ii. 697 f.). Every year, on the 14th of May (Ovid, Fasti, v. 621), twenty-seven by the former of the factor of the state of the seven by the former of the seven by the seven b human-like figures, constructed of bulrushes, were thrown into the Tiber from the *Pons sublicius* (Varro, *de Ling. Lat.* vii. 44) with religious ceremonies at which the Pontifices, the Vestal Virgins (Dion. Hal. i. 38), and the Flaminica Dialis (Gell. Noct. Att. x. 15. 30; Samter, 377) were present. Argei, the name given to these figures, is the Gr. Apycio. This term, which in Greek is found only in the epic pocts, was certainly introduced into the Roman religion from Greek oracular verse. In the sore stress of war the oracle guaranteed relief on condition that twenty-seven of the enemy's people—the number has chthonic associations (Diels, 39 ff.)—were cast into the river. In the language of the oracle the Roman was designated 'Troianus'; the enemy, 'Argivus' (Diels, 44, note). Probably the condition laid down by the oracle was fulfilled on the first occasion by an actual immolation of human beings, but thereafter in the milder form of an offering of bulrush figures (Wissowa, in Pauly-Wissowa, ii. 700). On the assumption that the ceremony was derived from Greek ideas, the participation of the Roman priesthood certainly strikes us as strange. We may lief on condition that twenty-seven of the enemy's hood certainly strikes us as strange. We may perhaps suppose that the gild of bridge-builders, the Pontifices, were in reality performing expia-tions for the observance of a foreign rite at the Pons sublicius, which was under their charge, and that in these they associated with themselves the Vestal Virgins and the Flaminica—unless, indeed, the ceremony was originally a Roman festival upon which the *Gracus ritus* was subsequently grafted (Deubner, ARW xiv. [1911] 306).

upon which the Gracus ritus was subsequently grafted (Deubner, ARW xiv. [1911] 306).

With the Argei sacrifice learned men of antiquity associated a Roman proverhial phrase, viz. sezagenarios de ponte. Festus refers to this in a passage (p. 334), the lacuna of which are filied up with certainty: 'Sexagenarios [de ponte olim deicibant], cuius causam Mani[lius hanc refert, qund Romam] qui incoluerint (primi Aborigines, aliquem blominem, sexaginta [annorum qui esset, immolare] Diti Patri quolfannis soliti fuerint]'; this sacrifice, be says, was subsequently changed hy Hercules into that of throwing bulrush figures from the bridge (cf. aisn Ovid, Fasti, v. 6231; Otto, Sprichvörter d. Römer, Leipzig, 1890, p. 3201.) Varrn(ap. Non. p. 842 [Lindsay]) gives a different expianation, asserting that the old men, who were no longer allowed to rute in public assemblies, were summnned by this old proverb to abandon the pons ('voting-hridge'). But this cannot be the true expianation, as it does not accord with what we know otherwise of voting among the Romans (Mommsen, Röm. Staatsrecht, Leipzig, 1899, ii. 408). We must therefore assume that the proverb points to an ancient custom of throwing peoplo from the bridge. Nevertheiess, this cannot be regarded as human sacrifice; it was in reality a secular act of doing away with burdensome nid people whom the State would no longer maintain (B. Schmidt, 'Der Selbstmord d. Greise von Keos,' in Neue Jahrb. f. d. klass. Allert. vl. [1903] 617 ft.). It is quite probable that the Romans of primitive times treated the aged in this barsh way; thus, no the advance of the Gauls, they left their nld people hehind them without means of self-defence—it was only in later writings that these old people were said to have remained behind in their own accord (Livy, v. 41. 1). Viewing the matter purely by itself, welmight think that the Romans would be willing enough to searifice the aged as Argei by throwing them from the bridge. But the aged, after all, were Romans, not Argei; and W. Warde Fowley (T

foro a secular act of dispatching them on grounds of public utility. We have an exactly similar case in the slaying of the Rex Nenorensis, and this likewise was not a human sacrifice. A run-away slave might save himself from his pursuers by killing the priest of Diana of Nemi. He assumed the position of priest, and held it till he met a like fate at the hands of another fugitive (Straho, v. 230). This is an instance of a practice found among many peoples; they kill their king or priest before he becomes sick or feeble, believing that the welfare of the tribe is dependent upon his remaining strong. They appoint betimes a vigorous successor, who at once displays his strength by overthrowing the man whose place he takes (Frazer, GB3, pt. lii. 'Dying God,' London, 1911, p. 141 ft.).

With the sacrifice of Argive enemies, however, it is probably correct to associate the rite of bury-

it is probably correct to associate the rite of burying alive a man and a woman belonging to a hostile nation (Wissowa, 421). In 216 B.C.—the most trying period of the war with Hannibal—Livy (xxii. 57. 6) informs us that 'ex fatalibus libris sacrificia aliquot extraordinaria facta: inter quae Gallus et Galla, Graecus et Graeca in foro bovario sub terra vivi demissi sunt in locum saxo consaeptum, iau anto hostiis humanis . . . imbutum.' The Sibylline Books (Plut. Marc. 3, Quæst. Rom. 83), that is to say, prescribed at that juncture special means of allaying the anger of the gods, among these means being the previously tried expedient of burying a man and a woman of the enemy's people. The strict rule was evidently enemy's people. The strict rule was evidently that the two victims should belong to the nationality with which the Romans were actually at war at the time (Pliny, HN xxviii. 12: 'gentium cum quibus tum res esset'). Now the hostile peoples had at one time been the Greeks and the Gauls, and subjects of these nationalities, by an erroneous conservatism, were sacrificed also during the war with Carthage (Diels, 85 ff.). That this eustom was suggested by Greek oracular writings is shown also by the fact that the prescribed prayers were uttered by the president of the Quindecimviri (Pliny, loc. cit.), whose principal function was to guard the Libri Sibyllini. The import of the rite was that of a sacrifice to the gods, who thus received the life of a man and a woman as pars pro toto; with the lives of the two victims the lives of all the men and women of the same tribe were magically bound up ('obliga-mentum magicum,' Orosins, iv. 13. 4); and, if the gods accepted the one pair, the rest of the nation would necessarily follow them. Pliny indicates that he bad himself witnessed a sacrifice of this kind ('etiam nostra aetas vidit')—'in the vicarious ceremony,' says Wissowa (421); but the present writer is not certain as to the latter point, as the Emperor Aurelian (see *Vita Hist. Aug.* 20), when organizing the consultation of the Sibylline Books, ordered 'cuiuslibet gentis captos' to be reserved for sacrifice in case of need.

Finally, in the reign of Angustus, another foreign people, the Iberians, introduced into Kome a new type of human sacrifice, viz. a devotio. Dio Cassins (liii. 20) states that S. Pacuvius eon-secrated himself to Augustus in the manner of the Iberians (cf. Val. Max. ii. 6. 11). This clearly means that the tribune, invoking the gods, vowed that, if they demanded the life of the Emperor they should take his instead. Vows of this kind are met with also in later times. When the Emperor Caligula was sick (Suet. Cal. 27; Dio Cass. lix. 8; Bouché-Leclereq, loc. cit. 119), two Romans pledged themselves to die that thereby the Emperor might recover; and the latter took them at their word. The devotio on the Emperor's behalf is mentioned also by Fronto, p. 6 (Naber).

These last-mentioned examples show that outside the official religion of Rome the idea of bunian sacrifice was very powerful in private circles. How far the persons concerned were influenced by conceptions inherited from ancient Roman life, or by forcign ideas, or were actuated by their own thoughts, is in most cases difficult to decide.

The most outstanding instances may be briefly indicated as follows (cf. v. Lasaulx, Studien d. classischen Altertums, Regensburg, 1854, p. 248 ff.). Those who took part in the conspiracy of Catiline are said to have drunk the blood of a slain man mixed with wine (Sall. Cat. 22), and to have bound themselves by dreadful oaths; this action was already classed among human sacrifices by Minucius Felix (30. 5). In 46 B.C., Cæsar, as a penalty for mutiny, caused two soldiers to be sacrificed in the Campus Martius by the priest of Mars (Dio Cass. xliii. 24), evidently in the belief that that god, who had been roused to anger by the mutiny, would be propitiated by the oblation. S. Pompeius threw men into the sea, doubtless as an offering to Poseidon (ib. xlviii. 48). In 41 B.C., on the Ides of March (Suet. Aug. 15), Octavian is reported to have sacrificed three hundred men at the altar of the Divns Julius (ἐτύθησαν, Dio Cass. xlviii. 14), his intention being to propitiate the manes of the murdered dictator. Perhaps Vergil, when speaking of the captives 'quos mitteret nunbris inferias' (Æn. xi. 81), had this sacrifice in his mind; in other passages he certainly creates ancient pre-cedents for the religious acts of Augustus. In a time of threatened calamity, Nero consulted his astrologers, and received the response: 'solero reges talia ostenta caede aliqua illustri expiare' (Snet. Nero, 36). This was probably a notion of Eastern origin, and such an Oriontal superstition explains also the self-immolation of Antinous on Hadrian's behalf (Dio Cass. lxix. 11; ef. art. Heroes and Hero-gods [Egyp.], p. 651b). The Emperor Commodus put a man to death in the worship of Mithra (Vita Hist. Aug. 9); but the fact that this action is spoken of as an enormity shows that the records of babitual human sacrifices by the priests of Mithra are false (F. Cumont, Textes et monuments relatifs aux mystères de Mithra, Brussels, 1899, i. 69). Particularly in the practice of magic, which prevailed widely in the Imperial period—a period profoundly affected by Oriental superstition (Pliny HN xxx. 16)—human beings were frequently put to death, either because the bodily parts of men were believed to be peculiarly potent, or because—what specially concerns us here—the spirits of the under world would not give their aid inless they received a buman being in sacrifice. It is not always easy to say which of these two motives prompted the killing of men in this connexion. The best-known source of information regarding the practice is Horace's poem Canidia (Epod. 5). Cicero (in Vatin. 14) charges Vatinius with the crimo 'inferornm animas elicere, puerorum extis deos manes mactare.' Julianus sacrificed children in order to learn the future (Dio Cass. lxxiii. 16), and Elagabalus 'slew children and practised magic' (ib. lxxix. 11).

These numerons instances of human sacrifice in the non-official religions sphere explain why the laws, the Senate, and the more humane Emperors frequently made a stand against the practice. Pliny (HN xxx. 12 f.) refers to a senatusconsultum of 97 n.c. directed against it, and to the injunction by which Tiberius prohibited the immolations of the Druids. Tiberius also forbade the sacrifice of human beings in the worship of Saturn in Africa (Tert. Apol. 9). Claudins re-enacted the decree against the Druids (Suet. Claud. 25), and Hadrian put an end to human sacrifice in the cult of the Cyprian Juppiter (Lact. Inst. i. 21. 1; Wissowa, 85). The jurist Panlus (v. 23. 16) writes: 'qui hominem immolaverint exve eius sanguine litaverint, fanum templumve polluerint, bestiis obiciuntur, vel, si honestiores sint, capite puninntur' (cf. Monumeen. Strafrecht. 639 ff.).

(cf. Monmsen, Strafrecht, 639 ff.).
We may sum up our investigation as follows.
The primitive ideas which underlie the practice of

human sacrifice obtained also among the Romans, as appears, above all, from the devotio. In particular cases the Romans of an earlier age seem to have deduced from these ideas certain consequences affecting their religious ritual, as is indicated by the Ver sacrum and the religious formula of capital punishment. On practical formula of capital punishment. On practical grounds or from motives of humanity, however, human sacrifice was abolished from the official religion at an early stage. Under foreign influences and appearable water the influences. ences, and especially under the influence of the Sibylline Oracles, it again gained a footing. It survived in sacrificial transactions outside the State religion till the close of the Imperial period, and legal measures did not succeed in entirely abolishing it.

abolishing it.

LITERATURE.—See the authorities cited in the article. The older literature is given in J. Beckers, De Hostiis humanis apud Graecos, Münster, 1867, p. 2; W. Warde Fowler, The Roman Festivals, London, 1899, p. 116, note 3; and J. Toutain, 'Sacrificium,' in Daremberg-Saglio, iv. 2. 976. The most recent works are cited in G. Wissowa, Religion u. Kultus d. Römer<sup>2</sup>, Munich, 1912, at the passages noted in the Index, p. 607, under 'Menschenopter.' See also J. S. Reid, 'Human Sacrifices at Rome, Journ. of Roman Studies, il. [1912] 34.

R. WÜNSCH.

HIIMAN SACRIFICE (Semitic).—The dis-

HUMAN SACRIFICE (Semitic).—The discussion of this subject falls naturally into two parts: (1) a marshalling of the evidence for the existence of the rite, and (2) an attempt to deduce

the purposes and ideas underlying it.

1. EVIDENCE FOR THE EXISTENCE OF SEMITIC HUMAN SACRIFICE.—I. Egypt.—That the Egyptians were an offshoot from the original Semitic stock, separated from the parent stem in early prehistoric times, is a favoured theory of their origin (see, e.g., G. A. Barton, Semitic Origins, London, 1902, where the theory is well worked out). They are, therefore, naturally to be included in an analysis of the evidence on the subject. But it should not be forgotten that in any case the cleavage of the Egyptians from the rest of the Semitic family must have taken place at a date so remote that the existence of the rite of human sacrifice among them in common with the Semites proper does not necessarily prove its existence in the primeval times before the Egyptian secession. It might have developed in Egypt independently, or under the influence of the ideas and practices of leter currounding tables. later surrounding tribes.

The existence of human sacrifices among the Egyptians has often been denied (E. Meyer, Gesch. des alten Agyptens, Berlin, 1887, p. 42, denies the evidence from native documents, while admitting the possibility of the Classical testimony being founded on true traditions; see also Dillmann, Handb. der AT Theol., Leipzig, 1895, p. 98). But the testimony of certain Greek and Latin authors, besed apparently on tradition, and correborated based apparently on tradition, and corroborated by obscure passages in certain Egyptian writings and by scenes represented in tomb wall-paintings, seems to indicate that this practice was observed, at least in a modified or symbolic form, down to

late historic times.

Thus, Diodorns Siculus (i. 88) speaks of the king of Egypt as having formerly sacrificed men of red colour—the colour of Set or Typhon—at the grave of Osiris; and he adds the important detail that, as red men were rare in Egypt, the victims were always foreigners. Manetho (ap. Porphyrius, ed. Müller, FHG ii. 615, no. 83) speaks of human sacrifices to Hera in Heliopolis, and of the modification of the rite by Amosis, who substituted waxen images for the victims. From another fragment (ib. ii. 616, no. 84) it appears that in these or similar sacrifices the victims were 'Typhonic' (=red) men, and were burnt alive; that the sacrifices took place in the dog-days, and were therefore probably pro-phylactic against drought or pestilence; and that the ashes of the victims were collected and scattered

against the wind. Procopius (de Bell. Pers. i. 19) states that in the temple of Phile the Blemmyes offered human victims to the sun. Ruslinus (HE ii. 24) relates, with horror, that in the holy place, or adytum, of the temple of Serapis at Alexandria there were prescried the heads of infants with the lips gilded. Seleucus is said by Athenæus to have written a book which treated of the subject (περί τῆς παρ' Αιγυπτίοις ἀνθρωποθυσίας, Müller, iii. 500, footnote). On the other hand, Herodotus (ii. 45) denies the existence of the practice in Egyptian religion; but that intelligent tourist reports only what his 'dragomans' thought fit to tell him, and his evidence on a subject which necessarily belongs to the arcana of religion is therefore not conclusive. Besides these ritual sacrifices, there is evidence for foundation sacrifices, modified, after the primitive period, by the substitution of an animal victim (see Lefébure, 'Rites égyptiens,' in Publications de Pecole des lettres d'Alger, 1890, pp. 4, 19, 36), and, further, the special circumstances of Egypt, dependent for its life on the Nile inundations, demanded a Nile sacrifice, which the Arab historian Mnrtadhā describes as lasting down to the Muslim occupation of Egypt (A.D. 642)—a young girl being annually east into the river to ensure a sufficient rise in the water (Eng. tr., 1672, p. 143). A survival of this custom is described by E. W. Lane (Manners and Customs of the Modern Egyptians, London, 1860, ch. xxvi.). A conical pillar of earth was erected in front of the dam at Cairo, and sown with millet. It was called 'arūsah (' bride '), and no doubt represented the human victim of the original rite.

It is not to be expected that the native Egy tian monuments themselves should necessarily corroborate these statements of the Classical writers, even if the latter be strictly trustworthy. For, in general, the native is not so likely to record facts and practices which for him are commonplaces as is the foreigner to whom they are less familiar. But some passages in inscriptions and some pic-But some passages in inscriptions and some pictured scenes have been collected, which appear to show that the statements quoted are at any rate approximately correct. Amon-Hotep II., returning from his expedition to Syria, clubbed seven of his chief captives before the god Amon (see E. Naville, The Old Egyp. Faith, Eng. tr., 1909, p. 299). In the inscription on the tomb of Seti I. (ib. p. 298) the tale is told of the attempt of men to revolt against the sovereignty of Rā; of the resolup. 250) the take is told of the attempt of then to revolt against the sovereignty of Rā; of the resolution in the assembly of the gods to destroy the human race; of the partial carrying out of this resolve by Hathor; of the appeasement of the wrath of Rā by a draught mixed with human blood; and of his resolve to relective a rejective a rejective and the human state. and of his resolve to substitute animal for human sacrifice in the future. Some such substitution is perhaps hinted at in the dark saying of the Book

of the Dead (ch. xviii.):

'When the flends of Set come and change themselves into beasts, the great sovereign princes, on the festival of the breaking and turning up of the earth in Tattu (Busiris), slay them in the presence of the gods therein, and their blood floweth among them as they are smitten down.'

This seems to refer to a ploughing festival, wherein the 'Typhonic men' of the Classical writers were

replaced by animals.

Among scenes on Egyptian monnments suggestive of human sacrifice, the memorial of Mentaherhopesef (Maspero, in Mem. de la mission archéol. française au Caire, v. [1893] 435) has an important place. One of the scenes in this tomb represents a person called a tckennu, dragged face downwards on a sledge; another shows the (fictitious) strangling of this person. A fictitious sacrifice, of course, implies an actual sacrifice in an earlier age.

2. Babylonia and Assyria.—If traces of human sacrifice are obscure and ambiguous in Egypt, they are yet more so in the remains of the civilization of Mesopotamia. This is surprising, for people

with a highly developed pantheon and a complex ritual system, and notoriously ferocious in war-fare, might be expected to include human sacrifices among their regular religious practices. bilingual text (IV. Rawl. 26, no. 6) directing that the father shall give the life of his child for the sins of his own life, the head of his child for his own head,' and so forth, would certainly be a proof of the existence of vicarious human sacrifice if the translation were sound; but, according to Zimmern (KAT3, 1903, p. 597) and Jeremias (AT im Lichte des alt. Oriente<sup>2</sup>, Leipzig, 1906, p. 368), the word rendered 'child' should properly be translated 'lamb.' Another obscure inscription (III. Rawl. 61) contains a passage which has been rendered 'the son is burnt on the high places' [when the crops fail], but it seems more probably to mean 'the grain [of a certain species] is burnt in the heat of the sun.

Less questionable evidence, however, is not wanting. The first comes from that most important chapter 2 K 17, which describes the practices of the deported tribes which were substituted for the captive Israelites. There (v. s1) the Sephar-vites (apparently the people of Sippar) are stated to have burnt their children in the fire to Adrammelech and Anammelech, the gods of Sepharvaim [=Adar-Malik (cf. Adrammelech, the name of Sennacherib's particide son, 2 K 19<sup>37</sup>) and Anu-Malik]. This rite obviously was carried by the Sepharvites from their old to their new home; and if, as seems to be most probable, these were really the men of Sippar, then such sacrifices must have taken place in the town of Sippar. The chief god of Sippar was Samas, the sun, who was also called Amna; it is interesting that Cod. A of the LXX in this passage presents the form 'Αμνημελέχ. Α human sacrifice seems to be actually figured in a seal published by Ball (PSBA xiv. [1892] 149, where the passages already quoted are discussed). In this scene the following figures are represented: (1) a priest standing, holding a sceptre in both hands, facing (2) a divinity, standing on the top of a ziqqurat, and holding in his right hand a curved sword, in his left a sceptre. Flames burst from his shoulders; behind him is an altar, with vegetable offerings upon it. (3) Behind the divinity are two standing figures, clothed in leopard skins, with their right arms raised in the attitude of striking. Between them is (4) a kneeling man, wearing only a loin-cloth and a head-dress. him is a representation of flames, and flying towards him is a bird of prey. One of the standing skin-clad figures holds back his head, and the other pulls aside his beard, as though to expose his throat conveniently for the sacrificial blow.

Less certain evidence is the prescription that a son or a daughter shall be burnt on the altar of a divinity as a penalty for a breach of contract (Johns, Assyr. Decds, Cambridge, 1898–1901, iii. 345), which may simply be a penal provision; and such passages as 'I burnt their boys and girls in the fire,' in Assurnașir-pal's trinmphal inscriptions over conquered cities, which merely record a barbarity consonant with the rest of the acts of that abominable savage. There is, however, a magical text (quoted in Zimmern,  $KAT^3$ , 599) which mentions the sacrifice of a slave along with an ox or a sheep.

3. Canaan. — Here we are on firmer ground. The practice of human sacrifice in the religion of the Scinitic predecessors of the Hebrews is amply proved by certain OT passages (Dt 12<sup>31</sup> 18<sup>10</sup>, and by inference in such prohibitions as Ly 18<sup>21</sup>), and has been corroborated by the results of recent ex-In the High Place at Gczer, and in concavations. nexion with what appears to have been a rock-cut altar at Tannach, the skelctons of new-born infants have been found buried in jars. Similar discoveries

were made in the corners of honses, nnder or elose by the foundation. Two burnt skelctons of children about six years of age were also found in the Gezer sanctuary, and near it was a cistern which had apparently been adapted as a receptacle for the refuse of sacrifices. Large numbers of animal bones, and many human bones of both sexes and all ages, were found in it. The excavator at Gezer was careful to get an expert medical opinion that some at least of the infants found buried had actually lived a separate existence, and that they were not merely still-born or untimely births thus disposed of (with or without the recondite notions of inducing a re-birth and second chance of life, as suggested in Frazer, Adonis, Attis, Osiris, London, 1907, p. 83). At Tell Mutesellim (Megiddo) a girl of about fifteen had been slaughtcred at the foundation of a large building, and her skeleton was found built into the wall. In two cases at Gezer the skeletons of young persons (a youth about eighteen, and a girl a year or two younger) were found, which had evidently been sawn in two. There was nothing to indicate clearly the circumstances under which so exceptional a form of execution had been

4. Arab tribes, ancient and modern.—Under this head we include the various tribes of the trans-Jordanic provinces, the Sinaitic peninsula, and North Arabia—known as the Midianites, Ammonites, Moabites, etc.—as well as the Arabs before they adopted the teaching of Muhammad. tribes were all so closely related that evidence of the practice under discussion among one or two will probably be sufficient proof of its prevalence among them all. Direct evidence is afforded by the incident of the sacrifice of Mesha', who immolated his heir to Chemosh, when hard pressed by the Israelites (2 K 327)—an act which seems to have struck terror into the victors, who fled from the wrath of Chemosh whose land they were invading. Wellhausen (Reste arab. Heidentums, Bernn, 1897, pp. 42, 43, 115) and other scholars have collected the indications of human sacrifice which remain among the Arabs, in spite of the efforts of post-Islāmic authors and copyists to efface the traces of the rites and beliefs of the 'times of ignorance.' These show clearly that the Arabs offered prisoners of war to the stellar and other divinities, and also sacrificed boys to Dusares and al-'Uzzā, the morning star. The best-known example is that related by Nilus (Narrat. vi.) of his own son Theodulus, who narrowly escaped being a victim. He was stolen by the Saracens, c. A.D. 400, and was to have been sacrificed to the planet. The ritual time for the offering lay between the appearance of Venus above the horizon and her disappearance in the rays of the rising sun. In answer to the boy's prayer, his captors overslept, and the time had already passed when they awoke; he was therefore brought instead to the slavemarket of Elusa, of which place he lived to become bishop

Hebrews. - This member of the Semitic family was no less prone than the rest to human sacrifices, and required the special instruction of lawgivers and prophets to eradicate the practice. Their great ancestor was moved to offer his son Isaac (Gn 22). Jephthah offered his daughter (Jg 11<sup>30f.</sup>) under circumstances differing only in detail from the case of Mesha—in the one the vow preceded, and the act followed, the victory; in the other the act itself was prior to the issue of the battle. The underlying ideas, however, were identical, and, notwithstanding all attempts to

It is said that in some parts of Egypt untimely births are buried in the corners of the houses of the fellahin, not in the graveyard of the village. This may conceivably be a survival of the practice of immediating a child or other person at the foundation of a house, and laying the corner-stone on the body

explain away or to modify the Hebrew instance, there can be no reasonable doubt that it involved the death of the victim. Samuel 'hewed Agag in pieces before the Lord' (1 S 15<sup>23</sup>), but this is a doubtful case, in view of his deprecation of Saul's intent to sacrifice immediately before (v. 220%). It seems more probably to have been an act of judicial punishment (see Baethgen, Beiträge, Berlin, 1888, p. 221). Hiel re-built Jericho 'upon' two of his sons (1 K 1634), i.e. sacrificed them at certain stages of the work, as we have seen to have been done at Megiddo and elsewhere. After the partition of the kingdom, the northern branch (2 K 17<sup>17</sup>) as well as the southern, especially under Ahaz (16<sup>3</sup>) and Manasseh (21<sup>6</sup>), sacrificed children in fire; by the time of Jeremiah a special place, the Ge Ben-Hinnom, had been set aside especially for this rite. On the other hand, Isaiah (57<sup>5</sup>), Micah (67), Jeremiah (19<sup>5</sup>), and Ezckiel (20<sup>31</sup>) added their fulminations to the direct prohibitions of Leviticus (18<sup>21</sup>) and other passages in the law of the Pentateuch. It does not fall within the scope of this article to discuss the question to what deity these various sacrifices were offered, or to inquire into the re-lationship between Jahveh and Molech (see *ERE* i. 390). The legitimate cases quoted above are sufficient to prove the existence of human sacrifices among the Hebrews, without calling in more doubtful instances, such as the murder of Abel (Gn 4), the death of Uzzah (2 S 6'), the massacre of the priests of Baal (1 K 1840), and other events, where critics have traced ritual acts with more or less improbability.

6. Phœnicians and Carthaginians.—Here, as in the case of the Egyptians, we have to trust very largely to the testimony of Classical writers. Of the Phonicians, who loomed so largely in the works of the antiquarian charlatans of a hundred years ago, we really know next to nothing; and the banal inscriptions of Carthage are not illuminating. Three or four Numidian votive tablets have been supposed to state that A has offered his son B, but neither reading nor interpretation can be considered trustworthy (see Gesenius, Scripturæ linguæque Phæn. monumenta, Leipzig, 1837, pp. 446 ff., 453: these inscriptions are not yet [1913] included in CIS. Eusebius, however (Præp. included in CIS). Eusebius, however (Prap. Evang. iv. 16), following Sanchuniathon (apud Philo), speaks of the Phonicians offering their dearest to Kronos; and other writers ascribe the same custom to the Phænician colonies of Cyprus, Carthage, and Massilia.

For Cyprus, see Euseb. loc. cit.; for Carthage, Porphyrius (ds Abst. ii. 56), Diodorus Siculus (xx. 14), and Pliny (HN xxxvi. v. 4); for Massilia, Servius (in Æn. iii. 57).

7. Southern Semites. - The Semitic-speaking people of Abyssinia appear to have been originally a colony from S. Arabia, and presumably carried with them from their former home all the rites of their religion, including that of which this article treats. No direct evidence, however, bearing on the subject is to be found in the unsatisfactory

literature relating to that little known country.
II. THE PURPOSE OF HUMAN SACRIFICE. Human sacrifice is the offering of a human individual to a divine power. It is generally understood to involve the slaughter of the victim, but that is not absolutely necessary; the life of a mediæval anchorite, walled up in a narrow cell, was sacrificed no less literally than was that of the son of Mesha'. But in the Semitic world, with some exceptions and modifications presently to be noted, the victim was actually put to death. It is of the highest importance to distinguish true cases of sacrifice from the following acts, which are sometimes confused with them: (1) murder for political or criminal causes, such as the satisfaction of private grudge or greed; (2) execution of criminals and

prisoners of war; (3) blood-revenge; (4) infanticide, as organized among the Arab tribes; (5) slaughter for medical purposes, e.g. to procure the baths of children's blood supposed to care leprosy (on which see Pliny, HN XXVI. i. 5). Biblical cases of the first three of these, all of which have been called 'sacrifices,' are the stories of Abel (Gn 4), Agag (1 S 15<sup>23</sup>), and the sons of Saul (2 S 21). The last of these cannot have been a sacrifice in any case, as the victims were hanged (see Dt 21<sup>23</sup>, and cf. the executions in Nn 25<sup>4</sup>, which have also been erroneously taken as a sacrifice). The fourth (on which see the gruesome 'Additional Note C' in W. R. Smith's Kinship and Marriage<sup>2</sup>, London, 1903, p. 291 ff.) is merely a practical device to reduce the non-combatant members of a tribe

non-combatant members of a tribe.

In a true human sacrifice, the victim may be (a) a young infant, the first-born of the family; (b) a criminal or prisoner of war; or (c) a person of special importance in the eyes of the person or tribe offering the sacrifice. In the first case we have, in the majority of instances, a sacrifice of primitiæ, whereby the firstfruits of the field, of domestic animals, and of the human family were sacrificed to the deity. In the second case the victim has offended against the divine majesty, either by his crimes or by fighting against the people of the divinity; the god has triumphed over his enemies, and their blood is poured out before him in celebration of the triumph. third case is rather different: the god has to be appeased by his own people; a calamity or plague has to be averted, or some such prize as victory in battle has to be obtained; the most valuable gift that the tribe can offer has, therefore, to be presented in payment for the boon; the king's eldest son must be offered as a burnt-offering that there may be 'great wrath' against his enemies (2 K 3").

By way of appendix to this article, two points

must be considered briefly: (a) the modifications and substitutes offered for human sacrifices; and (b) the strange superstition, not yet wholly extinguished, that the mediæval Jews practised a form

of ritual murder.

(a) Modifications and substitutes for human sacrifice.—Although, as the notorious case of the Aztecs shows, the practice of human sacrifice is not inconsistent with a high standard of culture, it is natural that the advance of civilization should develop a repugnance against the rite in its crudest form, and that various devices should be invented to satisfy the demands of the gods without actually taking life. There are four such devices that call for mention. (1) The substitution of a model of wax or straw, as we have already seen, was early introduced into Egypt. Small figures of men cut from laminæ of bronze and silver were found under the foundation of a house at Gezer, evidently representing actual human victims. The occasional cases of the sacrifice of vile, worthless, or crippled members of the community may also in a sense be a substitution for lives more valuable. Although the dogmatic statements of folk-lorists on such a point cannot be accepted without reserve, it is possible that some children's games (see ERE ii. 852) are the pale reflexion of rites that once involved the immolation of human victims. (2) By redemption the eldest son of the Hebrew family was rescued from the doom that doubtless was literally carried out at first (Ex 13<sup>13</sup>). (3) Probably mutilation and similar irreparable injuries—especially those involving the loss of male virility or female chastity—war devices to preserve life while female chastity—were devices to preserve life while sacrificing its joy. (4) Substitutionary acts were also performed, in which all semblance of the victim disappeared. Thus, under the foundations of many houses in Palestinian excavations have been discovered groups of larges and bowle (usually been discovered groups of lamps and bowls (usually

the lamp inside one bowl, with another bowl inverted over it), one case of which was found at Gezer associated with a sacrificed infant. It is highly probable that these deposits were typical of an earlier rite in which there was the slaughter of

a victim.

(b) Mediaval superstitions regarding the Jews.-In the Middle Ages an extraordinary idea was prevalent that the Jews practised secret rites for which the blood of Christians, especially of Christian children, was essential. This wild notion was, and in some quarters has been in quite recent years, fostered by politically interested persons in order to inflame anti-Semitic passions. For the superstition there seems to be a certain basis of fact. The mutual hatred of Jew and Christian, and the oppressions of which the latter were guilty, would naturally lead to reprisals when opportunity offered for them; and we need not be surprised to find that such a reprisal should take the form of a grim parody of the Crucifixion, the event to which the Jews ascribed their misfortunes. Accordingly it appears that some drunken Jews at a feast—no doubt that of Pnrim—crucified a Christian child in the Syrian town Inmestar (Socrates, HE vii. 16) in A.D. 416. About 600 years later this seems to have been followed by the similar mnrder of St. William of Norwich. Other alleged cases followed thick and fast, especially in England and Germany; even so late as 1900 a mysterious murder in West Prussia was made the lever for an anti-Semitic demonstration.1 All the recorded cases, from that of William of Norwich to the last mentioned, have been analyzed by H. L. Strack (*The Jew and Human Sacrifice*, Eng. tr., London, 1909 [ef. his art. ANTI-SEMITISM, in vol. i., esp. p. 597]), and the results of his investigation are: (1) as just mentioned, that there may have been individual cases of murder by Jews, but that these are a very small minority of the alleged examples recorded, and in any case were simply acts of revenge for personal or national wrongs; (2) that in no Jewish rite is human blood in any circumstance required or utilized; (3) that there may be a few cases of slaughter to procure blood for medicinal purposes, which, as we have already seen, must not be confused with sacrifice proper, but that there is no real evidence of this; (4) that in the vast majority of cases the Jews were simply made scapegoats for mysterious murders, or even sometimes for accidental deaths, the evidence being generally doubtful, and the so-called 'confessions' being extracted by tortnre.

called 'confessions' being extracted by tortnre.

HUMAN SACRIFICE (Slavic).—The Baltic Slavs were fanatics and sacrificed Christians to their gods. Every year a Christian was chosen by lot and offered to the god Svantovit in his temple (Helmold, Chronica Slavorum, Frankfort, 1581, passim). The head of Bishop John of Mecklenburg was fixed on a lance and offered to the god Radigast (ib.). In Russia the so-called Chronicle of Nestor, under the year 983, i.e. a

<sup>1</sup> At the moment of going to press the trial is proceeding at Kieff of a Jew, Mendel Beiliss, on a charge of ritual murder.

short time before Vladimir's conversion to Christianity, tells that this prince sacrificed human victims to the gods. The lot fell upon the son of a Christian Varegue, who refused to give him up. The Russians forced an entrance into his house and slaughtered him and all his family.

L. LEGER. HUMAN SACRIFICE (Tentonic). - What Casar says regarding human sacrifice among the Gauls (de Bell. Gall. vi. 16: 'homines immolant, . . . quod pro vita hominis nisi hominis vita reddatur, non posse aliter deorum immortalium numen placari arbitrantur, publiceque einsdem generis habent instituta sacrificia') holds good also in the case of the Teutons. As late as the historical period, the latter people, when their own lives were imperilled, or when some threatened disaster was to be averted, offered human beings in sacrifice. They believed that the demons and gods who had a desire for human lives would be satisfied, or their anger appeased, by such immola-The human victims of these rites were not as a rule fully privileged members of the particular community; they were prisoners of war, slaves, outlaws, or children under age. At times when the community had no such persons at its disposal, and, in particular, in military campaigns or expeditions by sea, the victims were selected by lot. Like all other sacrifices among the Teutons, human sacrifices were regulated by the principle do ut des. Either they were of a prophylactic character—and from this class sprang the periodic immolations of human lives—or they were performed in fulfilment of vows. They were offered to the demons who caused death, or to the man-stealing souls of the departed, or to the god of death and of the dead; sometimes, however, the sacrifice was paid to the god of war, as also to the deities of fruitfulness, who were to be thus induced to prevent failure of crops and consequent famine. In process of time human sacrifice was superseded by the sacrifice of animals, or of objects regarded as substitutes for human life.

According to Tacitus (Germ. 9), all the German tribes offered human sacrifices to Wodan-Mercury on certain days. These immolations, however, were accorded not to Wodan as the supreme god, but to Wodan as the god of death, and were designed to avert a wholesale loss of life. Thus from other references of Tacitus we learn that the Hermunduri, after their victory over the Chatti, offered human lives to the god of death and Mars-Tlu, the god of war (Ann. xiii. 57). This is confirmed by the Norse records. When King Aunn of Upsala was growing old, he sacrificed nine of his sons to Odinn in order that his own life might be prolonged in return (Heimskringla, ed. F. Jónsson, Copenhagen, 1900, i. 45f.). In the same way, according to the Vikars Saga, Odinn bestowed upon his protégé, Starkad, a life of three human generations only on condition that Starkad should sacrifice King Vikar to him; and the god himself put into Starkad's hand the spear with which he was to slay tho king (Saxo Grammaticus, i. 276). While these examples belong to the sphero of myth, yet they witness to the people's belief that

Death holds his harvest in time of war. Hence the Teutons immolated the lives of enemies, especially after a victory. The South Teutonic sources do not usually indicate to whom such sacrifices were offered. Thus, e.g., the women of the Cimbri, after a victory, sacrificed their captives (Strabo, vii. 2. 3); after the battle of Arausio (105 B.C.) the captured Romans were hanged upon trees (Orosius, Hist. v. 16); the Teutons of West Germany treated their prisoners in the same way after the battle in the Teutoburger Forest (Tac.

VOL. VI.--55

Ann. i. 61); and similar sacrifices were performed by the Heruli (Procop. de Bell. Got. ii. 14), the army of Ariovistus (Cæs. de Bell. Got. ii. 14), the army of Ariovistus (Cæs. de Bell. Gotl. i. 53), and others. Sometimes we find that a vow of human sacrifice was made before a battle. Thus Radagaisus, the leader of the Teutons, on the occasion of his expedition into Italy, took a vow that, if he conquered, he would sacrifice the captured Christians (Orosius, vii. 37). In the Northern sources the vow and the oblation alike are paid to Oöinn, whose cult, as the god of war and of battles, had found its way into the Scandinavian region from N. Germany. Procopius (de Bell. Got. ii. 15) tells us that the Thulites had sacrificed human beings to Apps. When Jarl Einar of Orkney conquered Halfdan, the son of Harald, he devoted his adversaries to Oöinn in return for his victory (Icelandic Sagas, i. p. 8: 'gaf hann Oöni til sigrs sér'). When a Norse general came face to face with the enemy, he cried out: 'Oöinn á yör alla' ('Ööinn

has you all').

But Osinn was at the same time the leader, and thus also the god, of the dead, and his dominion was increased by the addition of fallen warriors (valr) to the company of the Einherjar. Hence he not seldom selected his own victims. He sent forth his battle-maidens, the Valkyrs, to bring to his kingdom the heroes who fell in the field of battle. We sometimes even meet with the belief that Osinn himself took part in the battle, and secured his destined victims. Thus, e.g., he was present at the great battle of Bravalla, in which King Harald of Denmark fought against Hring of Sweden, and the god himself struck King Harald down (Saxo Gram. i. 390; Fornaldarsögur, i. 380 f.). Or he gives the adversary of his destined victim a spear with which to slay the latter (Gautreks Saga, ed. Ranisch, p. 18 fl.). Sometimes, again, men devoted their own lives to the gods. When Eirlkr the Victorious, King of Sweden, met his nephew Styrbjörn in battle near Fyrisvellir, he dedicated his life to Osinn, before the onset, promising that he would die ten years afterwards (Fornmannasögur, v. 250). But the Northern Teutons of ancient times, in order to gain a victory over their enemies, sometimes offered sacrifices also to their tutelary deities. When Jarl Hakon of Norway joined battle with the Jomsvikings in the bay of Hjörungen (986), and the victory inclined to the side of the latter, he sacrificed his youngest son, Erling, to his protective goddess Thorgero Holgabrúo, and so won the day (Jomsvikinga Saga, cod. A.M. 510, p. 79 f.).

Besides war, expeditions by sea were another great source of danger to life. In the sea there lived a man-stealing demon whom the North Teutons ealled Rán ('robber'). Rán, with her nine daughters—personifications of the waves—laid hold of her victims in storms at sea. Those who were drowned passed into her kingdom, and were there regaled with lobsters and fish. Hence dwellers by the North Sea, or the ocean, before setting out upon a voyage, offered a human sacrifice, hoping thereby to protect themselves against the rapacity of the sea-demon. The heathen Saxons, before taking ship for home after their maranding and predatory incursions, killed a tenth of all their captives upon the beach, in order that a safe voyage might be granted to them (C. von Richthofen, Zur Lex Saxonum, Berlin, 1868, p. 204). Likewise the Normans, when embarking upon their Viking raids by sea, sacrificed human beings to the sea-god (Mém. de la société des antiq. de la Normandie, xxii. [1869] 129 f.). These sacrifices were performed upon the seashore with special frequency when the ships were unable to put forth because of storms or unfavourable winds. In such emergencies, and especially if other victims

were not available, the individuals to be sacrificed were often chosen by lot from among those who were about to take part in the voyage (Saxo Gram. i. 422). Here should be mentioned also the sacrifices offered by the Frisians to their supreme god Fosite. In Fosite's Land, an island in the North Sea, was situated, not far from a sacred spring, his sanctuary, violation of which was punished by the sacrifice of life after the god had announced by lot that he desired such an expiation (Alcuin, Vita Willibrordi, ch. 10; Friesische Rechtsquellen, ed. von Richthofen, Berlin, 1840, p. xliii). These immolations were performed upon the seashore; and as far down as Mediaval and Christian times it was a prevalent Frisian belief that the sea demanded the sacrifice of those who had been guilty of robbery (Adam of Bremen, Hist. Eccl. Hamb. iv. 3). Here, therefore, the sacrifice was originally offered to the seademon, and was transferred to Fosite, and brought into connexion with the violation of his sanctuary only after he had become the supreme object of worship.

But human sacrifices connected with seafaring were not so decidedly of a prophylactic character as those connected with failure of crops. Failure of crops meant famine, and famine meant great loss of life, and here we have the explanation of the human sacrifices performed in times of threatened scarcity. Thus, during a famine, King Heiðrekr, instead of offering up his own son, upon whom the lot had fallen, sacrificed King Harald of Reiðgotaland and his retinue (Hervarar Saga, ed. S. Bugge, Christiania, 1865, p. 227 f.). Like other races, the Teutons regarded the king as chiefly responsible for a bad harvest. It is recorded that the Swedes attributed both abundance and scarcity of crops to their kings (Heimskr. i. 75: 'Svíar eru vanir at kenna konungi bæði ár ok hallæri'). Even as late as 1527, we find Gustavus Vasa, at the parliament of Westerås, complaining that the people blamed the king for the lack of rain or sunshine (E. G. Geijer, Svenska Folkets Hist., Orebro, 1837, ii. 71). From heathen times comes the statement that the Swedes sacrificed King Domaldi 'pro fertilitate frugum deae Cereri' (Mon. Hist. Nor., Christiania, 1880, p. 98), when neither the immolation of animals nor that of ordinary men had been able to arrest the blight (Heimskr. i. 30 f.). When the immolation of kings, which among the Teutons gradually disappeared within historic times, was at length finally abandoned, the king who was held accountable for famine was dethroned, or even expelled from the country, as was the practice, e.g., among the Burgundians (Amm. Marcell. xxviii. 5. 14).

The practice of periodical human sacrifice, offered in spring to the deities of fertility, arose from the dread of possible dearth. Such a periodical rite was the sacrifice at the festival of Nerthns, which was celebrated every spring by seven tribes on the Baltic Sea (Tac. Germ. 40). At this festival the priest drove the car of Nerthus—the divine Terra Mater—through the various cantons of the confederacy, in order to secure the fertility of the whole country. Then, when the procession was over, the slaves who had accompanied the car were sacrificed to the goddess in her sacred lake. Another immolation on a large scale took place every ninth year in the ancient and highly venerated sanctuary of Lethra in Zealand, where the residence of the Danish kings was also situated. At this festival likewise the members of the confederation assembled for a joint-celebration in order that, along with their feast, they might perform the great immolation in which ninety-nine human beings, and an equal number of horses, dogs, and cocks, respectively, were sacrificed. This celebra-

HUME867

tion took place in winter—the season in which elsewhere the ancient Teutonic festival of the dead was held-and was designed to benefit the souls of the under world (inferos) and to expiate the sins that they had committed, as the Christian chronicler (Thietmar of Merseburg, *Chronicle*, i. 9) puts it. A similar sacrifice was performed in ancient Upsala. The scason of the year at which it took place is not total in the chronic state of the control of the control of the chronic state. noted in our sources, but was in all probability the early spring. The sacrifice was offered to the god of fertility, Frö or Frey, in whose honour, indeed, Saxo Grammaticus (i. 120), with his euhemeristic mode of explanation, says it was instituted. As in the festival of Nerthus, there was a procession here also, the image of Frey being borne through the district by a young priestess (*Flateyjarbók*, i. 337 ff.). Frey, too, received human sacrifices, at least in the later period of heathenism. These sacrifices, like the great immolation at Lethra, were performed every nine years, and were offered in the sacred grove at Upsala, their object being to propitiate the god, i.e. to seeme his favour for the people, and fertility for the land. The victims here were not only human beings, but also horses and dogs, nine of each kind being sacrificed. The bodies of the human victims were hung upon trees in the sacred grove, and the informant of Adam of Bremen (iv. 26-27) says that he had seen seventy-

two bodies suspended there.

The Teutons practised these immolations with a view to protecting human life and keeping malignant demons at bay. They had a similar purpose in the sacrifice associated with buildings—a practice met with among all races. It is true that the ancient sources supply no evidence of this observance among the Teutons, but the discovery of skeletons under ancient structures, and the still prevalent belief that great edifices can be made stable by means of sacrifice, indicate that this type of human immolation too existed among the Tcutons of heathen times. In order to give stability to a building—to prevent its fall, and the ealamity which this would involve—it was the practice to enclose a living person in the masonry under the main supports of the work. As a rule the victims in this case were children. In this particular sacrifice, however, the place of human beings was at an early date supplied by animals (especially eats), or by certain parts of animals (heads of horses, oxen, etc.), and at length by inanimate things (images, coins, etc.). The modern practice of putting in certain objects at the laying of foundation stones is a survival of the ancient rite. In the ancient sacrifices the victims were placed under the threshold of buildings, under the gateways of city walls, and under the pillars of bridges. Then the dikes upon the seacoast, as being specially exposed to the waves, were also protected by human sacrifices. In Oldenburg, children are said to have been thus inhumed as far down as the 17th cent., by way of making the dikes seenre (L. Strackerjan, Aberglaube aus dom Herzogtum Oldenburg<sup>2</sup>, Oldenburg, 1908, i. 127 ff.). And even at the present day we meet in many districts with the popular belief that certain structures of huge size could never have come into existence at all unless the builder had buried human being under their supports. HUME.—I. Life.—David Hume, best known for his philosophical writings, but a student of history and economics also, was born in Edinburgh on 26th April 1711. As he himself tells us in his autobiography, he came of a family of distinction but of small estate. He was the youngest of three children, who were early left fatherless, but had the care of a devoted mother. Little is known of his early education. He entered the University of Edinburgh in 1723. His philosophical and literary bent showed itself carly in life and grew steadily, triumphing in the end over all other interests. tried business, but found it unsuitable. In In 1734 he went to Paris, and there wrote his Treatise of Human Nature, the first and second volumes of which were published in 1739, when he was only twenty-eight years old. He expected much from this his first work, but suffered a great disappointment. It 'fell dead-born from the press.' He was not discouraged, however, but proceeded to write in a more popular form. In 1741 the first volume of his Essays appeared, and gained for him almost immediately the notice he courted. A second volume of Essays followed the next year. In 1744 he had hopes of securing the chair of Moral Philosophy in the University of Edinburgh, but failed. He then secured the post of tutor to the Marquis of Annandale. In 1746 he became secretary to General St. Clair, with whom he remained, with a slight interruption, for two years, continuing his writing. After some time spent at Nincwells, in Berwickshire, he returned to Edinburgh in 1751, where he remained for twelve years. These were the years of his greatest literary activity, in which most of his political, economic, and religious studies were written, together with his *History of England*. In 1763, in company with Lord Hertford, he again visited Paris, and was received there with gratifying distinction. He was under-secretary to General Conway in 1767, and spent two years in London. He returned to Edinburgh in 1769, to remain for the rest of his life, enjoying a wide reputation and a substantial income. He died on 25th August 1776. His own description of himself as 'a man of mild dispositions, of command of temper, of an open, social, and cheerful humour, capable of attachment, but little susceptible of enmity, and of great moderation in all my passions, is likewise the description of him given by those who knew him well. His friendship for Rousseau, which was poorly requited, was characteristic of him. There was in his disposition a mixture of eynicism and kindliness, a scepticism, half serious and half playful, which prevented for a time a just estimate of his ability. But his reputation has grown with the years, and he ranks among the most acute and penetrating students of human nature.

3. Philosophy.—Hnme's philosophy is usually regarded as the culmination of the line of thought begun by Locke and continued by Berkeley. There is no doubt that he wrote with the ideas of these predecessors in mind, and fully conscions that he was carrying them forward to their ultimate issue. His philosophy, however, is much more than a development of this issue. The turn given to the result, the conception of human nature arising in the conrse of reaching it, and the consequent

Ann. i. 61); and similar sacrifices were performed by the Heruli (Procop. de Bell. Got. ii. 14), the army of Ariovistus (Cæs. de Bell. Gall. i. 53), and others. Sometimes we find that a vow of human sacrifice was made before a battle. Thus Radagaisus, the leader of the Teutons, on the occasion of his expedition into Italy, took a vow that, if he conquered, he would sacrifice the captured Christians (Orosius, vii. 37). In the Northern sources the vow and the oblation alike are paid to Odinn, whose cult, as the god of war and of battles, had Note that, as the gott of war and of otters, and found its way into the Scandinavian region from N. Germany. Procopius (de Bell. Got. ii. 15) tells us that the Thulites had sacrificed human beings to Apps. When Jarl Einar of Orkney conquered Halfdan, the son of Harald, he devoted his adversaries to Odinn in return for his victory (Icclandic Sagas, i. p. 8: 'gaf hann Odni til sigrs sér'). When a Norse general came face to face with the enemy, he cried out: 'Obinn a yor alla' ('Obinn

has you all').

But Odinn was at the same time the leader, and thus also the god, of the dead, and his dominion was increased by the addition of fallen warriors (valr) to the company of the Einherjar. Hence he not seldom selected his own victims. He sent forth his battle-maidens, the Valkyrs, to bring to his kingdom the heroes who fell in the field of battle. We sometimes even meet with the belief battle, We sometimes even meet with the belief that Odinn himself took part in the battle, and secured his destined victims. Thus, e.g., he was present at the great battle of Bravalla, in which King Harald of Denmark fought against Hring of Sweden, and the god himself struck King Harald down (Saxo Gram. i. 390; Fornaldarsögur, i. 380 f.). Or he gives the adversary of his destined victim a spear with which to slay the latter (Gautreks Saga, ed. Ranisch, p. 18 ff.). Sometimes, again, men devoted their own lives to the gods. When Eirskr the Victorious, King of Sweden, met his nephew Styrbjörn in battle near Fyrisvellir, he dedicated his life to Opinn, before the onset, promising that he would die ten years afterwards (Fornmannasögur, v. 250). But the Northern Tentons of ancient times, in order to gain a vietory over their enemies, sometimes offered sacririccory over their enemies, sometimes offered sacrifices also to their tutelary deities. When Jarl Hákon of Norway joined battle with the Jómsvikings in the bay of Hjörungen (986), and the victory inclined to the side of the latter, he sacrificed his youngest son, Erling, to his protective goddess Thorgero Holgabrúo, and so won the day (Jómsvikinga Saga, cod. A.M. 510, p. 79f.).

Besides war, expeditions by sea were another great source of danger to life. In the sea there

great source of danger to life. In the sea there lived a man-stealing demon whom the North Teutons called Ran ('robber'). Ran, with her nine daughters-personifications of the waveslaid hold of her victims in storms at sea. Those who were drowned passed into her kingdom, and were there regaled with lobsters and fish. Hence dwellers by the North Sea, or the ocean, before setting out upon a voyage, offered a human sacrifice, hoping thereby to protect themselves against the rapacity of the sea-demon. The heathen Saxons, before taking ship for home after their marauding and predatory incursions, killed a tenth marading and predatory incursions, kined a tenth of all their captives npon the beach, in order that a safe voyage might be granted to them (C. von Richthofen, Zur Lex Saxonum, Berlin, 1868, p. 204). Likewise the Normans, when embarking npon their Viking raids by sea, sacrified human beings to the sea-god (Mém. de la société des antiq. de la Normandie, xxii. [1869] 129 f.). These sacrifices were performed upon the seashore with special frequency when the ships were unable to put forth because of storms or unfavourable winds. In such emergencies, and especially if other victims were not available, the individuals to be sacrificed were often chosen by lot from among those who were about to take part in the voyage (Saxo Grani. i. 422). Here should be mentioned also the sacrifices offered by the Frisians to their supreme god Fosite. In Fosite's Land, an island in the North Sea, was situated, not far from a sacred spring, his sanctuary, violation of which was punished by the sacrifice of life after the god had announced by lot that he desired such an expiation (Alcuin, Vita Willibrordi, ch. 10; Friesische Rechtsquellen. ed. von Richthofen, Berlin, were not available, the individuals to be sacrificed ische Rechtsquellen, ed. von Richthofen, Berlin, 1840, p. xliii). These immolations were performed upon the seashore; and as far down as Mediaval and Christian times it was a prevalent Frisian belief that the sea demanded the sacrifice of those who had been guilty of robbery (Adam of Bremen, Hist. Eccl. Hamb. iv. 3). Here, therefore, the sacrifice was originally offered to the seademon, and was transferred to Fosite, and brought into connexion with the violation of his sanctuary only after he had become the supreme object of worship.

But human sacrifices connected with seafaring were not so decidedly of a prophylactic character as those connected with failure of crops. Failure of crops meant famine, and famine meant great loss of life, and here we have the explanation of the human sacrifices performed in times of threatened scarcity. Thus, during a famine, King Heiðrekr, instead of offering up his own son, upon whom the lot had fallen, sacrificed King Harald of Reigotaland and his retinue (Hervarar Saga, ed. S. Bugge, Christiania, 1865, p. 227 f.). Like other races, the Teutons regarded the king as chiefly responsible for a bad harvest. It is recorded that the Swedes attributed both abundance and scarcity of crops to their kings (Heimskr. i. 75: 'Sviar eru vanir at kenna konungi bæði ár ok hallæri'). Even as late as 1527, we find Gustavus Vasa at the as late as 1527, we find Gustavus Vasa, at the parliament of Westeras, complaining that the people blamed the king for the lack of rain or sunshine (E. G. Geijer, Svenska Folkets Hist., Orebro, 1837, ii. 71). From heathen times comes the statement that the Swedes sacrificed King Domaldi 'pro fertilitate frugum deae Cereri' (Mon. Hist. Nor., Christiania, 1880, p. 98), when neither the immolation of animals nor that of ordinary men had been able to arrest the blight (*Heimskr.* i. 30 f.). When the immolation of kings, which among the Teutons gradually disappeared within historic times, was at length finally abandoned, the king who was held accountable for famine was dethroned, or even expelled from the country, as was the practice, e.g., among the Burgundians (Amm. Marcell. xxviii. 5. 14).

The practice of periodical human sacrifice, offered in spring to the deities of fertility, arose from the dread of possible dearth. Such a periodical rite was the sacrifice at the festival of Nerthus, which was celebrated every spring by seven tribes on the Baltic Sea (Tac. Germ. 40). At this festival the priest drove the car of Nerthus—the divine Terra mater—through the various cantons of the confederacy, in order to secure the fertility of the whole country. Then, when the procession was over, the slaves who had accompanied the car were sacrificed to the goddess in her sacred lake. Another immolation on a large scale took place every ninth year in the ancient and highly venerated sanctnary of Lethra in Zealand, where the residence of the Danish kings was also situated. residence of the Danish kings was also situated. At this festival likewise the members of the confederation assembled for a joint-celebration in order that, along with their feast, they might perform the great immolation in which ninety-nine human beings, and an equal number of horses, dogs, and cocks, respectively, were sacrificed. This celebra-

867 HUME

tion took place in winter—the season in which elsewhere the ancient Teutonic festival of the dead was held-and was designed to benefit the souls of the under world (inferos) and to expiate the sins that they had committed, as the Christian chronicler (Thietmar of Mersebnrg, Chronicle, i. 9) puts it. A similar sacrifice was performed in ancient Upsala. The scason of the year at which it took place is not noted in our sources, but was in all probability the early spring. The sacrifice was offered to the god of fertility, Frö or Frey, in whose honour, indeed, Saxo Grammaticus (i. 120), with his euhemeristic mode of explanation, says it was instituted. As in the festival of Nerthus, there was a procession here also, the image of Frey being borne through the district by a young priestess (*Flateyjarbok*, i. 337 fl.). Frey, too, received human sacrifices, at least in the later period of heathenism. These sacrifices, like the great immolation at Lethra, were performed every nine years, and were offered in the sacred grove at Upsala, their object being to propitiate the god, i.e. to secure his favour for the people, and fertility for the land. The victims here were not only human beings, but also horses and dogs, nine of each kind being sacrificed. The bodies of the human victims were hung upon trees in the sacred grove, and the informant of Adam of Bremen (iv. 26-27) says that he had seen seventy-

two bodies suspended there.

The Teutons practised these immolations with a view to protecting human life and keeping malignant demons at bay. They lad a similar purpose in the sacrifice associated with buildings—a practice met with among all races. It is true that the ancient sources supply no evidence of this observance among the Teutons, but the discovery of skeletons under ancient structures, and the still prevalent belief that great edifices can be made stable by means of sacrifice, indicate that this type of linman immolation too existed among the Teutons of heathen times. In order to give stability to a building—to prevent its fall, and the calamity which this would involve—it was the practice to enclose a living person in the masonry under the main supports of the work. As a rule the victims in this case were children. In this particular sacrifice, however, the place of human beings was at an early date supplied by animals (especially cats), or by certain parts of animals (heads of horses, oxen, etc.), and at length by inanimate things (images, coins, etc.). The modern practice of putting in certain chiects at the laying practice of putting in certain objects at the laying of foundation stones is a survival of the ancient rite. In the ancient sacrifices the victims were placed under the threshold of buildings, under the gateways of city walls, and under the pillars of bridges. Then the dikes npon the seacoast, as being specially exposed to the waves, were also protected by human sacrifices. In Oldenburg, protected by human sacrifices. children are said to have been thus inhumed as far confiden are said to have been thus influmed as far down as the 17th cent., by way of making the dikes secure (L. Strackerjan, Aberglaube aus dem Herzogtum Oldenburg<sup>2</sup>, Oldenburg, 1908, i. 127 ff.). And even at the present day we meet in many districts with the popular belief that certain structures of huge size could never have come into existence at all unless the builder had buried a human being under their supports. Cf. artt. human being under their supports. Cf. artt. BRIDGE; FOUNDATION.

HUME .- r. Life .- David Hume, best known for his philosophical writings, but a student of history and economics also, was born in Edinburgh on 26th April 1711. As he himself tells us in his autobiography, he came of a family of distinction but of small estate. He was the youngest of three children, who were early left fatherless, but had the care of a devoted mother. Little is known of his early education. He entered the University of Edinburgh in 1723. His philosophical and literary bent showed itself early in life and grew steadily, triumphing in the end over all other interests. He tried business, but found it unsuitable. In 1734 he went to Paris, and there wrote his Treatise of Human Nature, the first and second volumes of which were published in 1739, when he was only twenty-eight years old. He expected much from this his first work, but suffered a great disappointment. It 'fell dead-born from the press.' He was not discouraged, however, but proceeded to write in a more popular form. In 1741 the first volume of his Essays appeared, and gained for him almost immediately the notice he courted. A second volume of Essays followed the next year. In 1744 he had liopes of securing the chair of Moral Philosophy in the University of Edinburgh, but failed. He then secured the post of tutor to the Marquis of Annandale. In 1746 he became secretary to General St. Clair, with whom he remained, with a slight inter-Clair, with whom he remained, with a slight inter-ruption, for two years, continuing his writing. After some time spent at Ninewells, in Berwick-shire, he returned to Edinburgh in 1751, where he remained for twelve years. These were the years of his greatest literary activity, in which most of his political, economic, and religious studies were written, together with his *History of England*. In 1763, in company with Lord Hertford, he again visited Paris, and was received there with grati-fying distinction. He was under-secretary to fying distinction. He was under-secretary to General Conway in 1767, and spent two years in London. He returned to Edinburgh in 1769, to remain for the rest of his life, enjoying a wide reputation and a substantial income. He died on 25th Angust 1776. His own description of himself as 'a man of mild dispositions, of command of temper, of an open, social, and cheerful humour, capable of attachment, but little susceptible of enmity, and of great moderation in all my passions,' is likewise the description of him given by those who knew him well. His friendship for Ronssean, which was poorly requited, was characteristic of him. There was in his disposition a mixture of cynicism and kindliness, a scepticism, half serious and half playful, which prevented for a time a just estimate of his ability. But his reputation has grown with the years, and he ranks among the most acute and penetrating students of human nature.

z. Writings.

3. Philosophy.-Hnnie's philosophy is usually regarded as the colmination of the line of thought begun by Locke and continued by Berkeley. There is no doubt that he wrote with the ideas of these predecessors in mind, and fully conscious that he was carrying them forward to their ultimate issue. His philosophy, however, is much more than a development of this issue. The turn given to the result, the conception of human nature arising in the course of reaching it, and the consequent

868

method of conducting inquiry are the really significant things in the work of this Scotsman, who delighted in calling himself a sceptic. His scepticism is not only a suspicion of his predecessors' philosophy; it is also the recommendation of a positive attitude towards life.

In its logical relation to the philosophy of Locke and Berkeley, the philosophy of Hume appears to be the natural and inevitable conclusion of the position they defended in regard to the objects and method of knowledge. Locke (q.v.) had reduced his inquiry into the 'original, certainty, and extent of human knowledge' to three fundamental tenets which may be stated as follows: (1) the only immediate objects of knowledge arc ideas; (2) all ideas are acquired; and (3) knowledge is a synthesis of ideas, 'the perception of the agreement or disagreement' of them as they are compared and related. Ideas, with Locke, were definitely dis-tinguished from things, on the one hand, and from the mind, on the other hand; they constituted a series of intermediate existences between the mind and the things to which knowledge is supposed to refer. Berkeley (q.v.) had questioned the validity of the distinction between ideas and things, if Locke's fundamental theses are to be maintained. If, that is, knowledge is concerned immediately with ideas, their comparisons and relations; if in both object and method it never passes beyond them, then the distinction between ideas and things becomes unintelligible. Knowledge deals directly with its objects; and, if it is a perception of them and their relations, it is evident that objects are what they are in perception; their esse is percipi. Hume pushes this analysis of Locke's position still farther, attacking the distinction between ideas and the mind, just as Berkeley had attacked the distinction between ideas and things. Nothing is given in perception, he urges, except that which is perceived, namely, perceptions. A mind distinct from perceptions is not given; it is not a datum of experience, an object to be identified among the sum-total of objects perceived. At best it is a group or 'bundle of perceptions' which expands or contracts as perceptions are added or subtracted. In other words, Hume contends that, if we take Locke's fundamental positions rigorously, then we must admit that perceptions—that is, the content immediately given in perception—are our only objects, and knowledge can deal only with relations between perceptions. To pass beyond perceptions, either to the objects which they are supposed to represent or to a mind which is supposed to perceptions. ceive them, is to take a step which experience does not warrant. Knowledge, as knowledge, is thus rigorously limited to the immediate data of experionce, and that means, with Hume, to our per-

ceptions.
These data of experience Hume divides into two classes—impressions and ideas—and rests the distinction between them squarely on experience. The clearest statement of the distinction is found in the second section of the Enquiry concerning Human Understanding, entitled, Of the Origin of

By the term impression, I mean all our more lively perceptions, when we hear, or see, or feel, or love, or hate, or desire, or will. And impressions are distinguished from ideas, which are the less lively perceptions, of which we are conscious, when we reflect on any of those sensations or movements above mentioned.

Furthermore, all ideas are derived from impressions, bnt impressions are themselves originals without any discoverable derivation. Ideas are copies, faint reproductions of impressions; and this fact gives us a rule by which to test the soundness of our ideas:

'When we entertain any suspicion that a philosophical term is employed without any meaning or idea (as is but too frequent), we need but enquire, from what impression is that supposed

idea derived? And if it he impossible to assign any, this will serve to confirm our suspicion. By bringing ideas into so clear a light we may reasonably hope to remove all dispute, which may arise, concerning their nature and reality '(ib.).

To this test Hume subjects such principal philosophical ideas as those of space, time, cause, necessary connexion, substance, mind, to find in each case that there is no single distinct impression as the source of the idea. Such ideas must be referred to the grouping of impressions or ideas, or to the passage from one impression to another, or from one idea to another. For instance, the idea of substance is not derived from any distinct impression,

'is nothing but a collection of simple ideas, that are united by the imagination, and have a particular name assigned them, by which we are able to recall, either to ourselves or others, that collection' (A Treatise of Human Nature, hk. i. pt. l. sec. vi.) The idea of necessary connexion is not derived from any necessary connexion discoverable among our impressions, but from the feeling attending the customary transition of the imagination from one object to its usual attendant.' And the idea of cause and effect is to be understood, not in terms of any discoverable power by which one thing works a change in some other thing, but in terms of the persistent habit of human nature to expect similar facts to be followed by similar experience.

Thus Hume attempted to abolish the leading ideas of the philosophy which preceded him, by pushing to the extreme the doctrine that, so far as knowledge is concerned, we deal only with perceptions and their relations. Since we perceive no power, no necessary connexion, no substance in which qualities inhere, and no mind which itself perceives, but only perceptions, impressions, and the ideas derived from them, we must interpret mind, power, substance, and necessary connexion solely in terms of impressions and ideas. When so interpreted, they lose the force and signifi-cance usually assigned to them. They cease to be principles applicable to things, and become rather principles for the gronping and associating of ideas. Thus Hume gave a great impetus to associationist psychology, to the view that knowledge is concerned only with original mental elements and their associations.

The result thus reached by Hume he presents to the reader as a recommendation for scepticism. He points ont that we naturally tend to repose faith in onr senses and to believe that we perceive external objects, whereas philosophy convinces us that we perceive only perceptions which we suppose refer to objects or represent them. Of this supposition we can have no proof, for our perceptions, being perceptions and nothing more, never give any indication of external objects. Confined thus to our perceptions, reason can never pass beyond them, and we are forced to doubt the rational soundness of any conclusions which attempt to carry us beyond (see Human Nature, bk. i. pt. iv., particularly sections i., ii., vi., and vii.).
Hume's reasoning here is so manifestly based

upon the assumption that perceptions are not objects—one of Locke's fundamental assumptions, which he has himself declared to be really unintelligible—that it is difficult to follow him seriously. He appears to be playing with the issue to which he has reduced the philosophy of his predecessor. But in another connexion he gives a decidedly serious and important turn to his 'scepticism, 'We may well namely, in his doctrine of belief. ask,' he states, 'What causes induce us to believe in the existence of body?, but 'tis in vain to ask, Whether there be body or not?' (ib. bk. i. pt. iv. sec. ii.). This statement may be generalized to sec. ii.). indicate how with Hume the problem of belief is more important than the problem of knowledge. To his mind philosophers had busied themselves HUME 869

too much with the question whether the things in which we naturally believe, such as an external world, power, God, providence, exist—a question which cannot be answered, because, in order to answer it, we should have to pass beyond the limitations which experience puts upon the problem of existence. There is no way of proving that that which we have not experienced exists. It is, therefore, idle to try. But, since we believe in spite of this fact, the grounds of our belief may be investigated. In every case, Hume reduces belief to some principle of human nature, to some habit or propensity of mind, just as he reduces the belief in necessary connexion to the feeling attending the inevitable expectation of similar consequences from similar events. He defines helief generally as 'a lively idea related to or associated with a present impression.' His comment on this definition is not only a clarification of it, but a good illustration of his philosophical position generally.

illustration of his philosophical position generally.

'When we infer the existence of an object from that of others, some object must always be present either to the memory or senses, in order to be the foundation of our reasoning; since the mind cannot run up with its inferences in infinitum. Reason can never satisfy us that the existence of any one object does ever imply that of another; so that when we pass from the impression of one to the idea or belief of another, we are not determin'd by reason, but by custom or a principle of association. But belief is somewhat more than a simple idea. Tis a particular manner of forming an idea; And as the same idea can only be vary'd by a variation of its degrees of force and vivacity; it foliows upon the whole, that belief is a lively idea produc'd by a relation to a present impression, according to the foregoing definition' (ib. bk. i. pt. iii. sec. vii.).

Then there is a kind of inevitableness about helief.

Then there is a kind of inevitableness about belief: it is the necessary result of putting the mind in certain circumstances. That is why scepticism, although it triumphs over reason and every attempt to establish by reason the objects of belief, is relatively impotent in the face of belief itself. 'Nature'—and here Hume means human nature-'will always maintain her rights, and prevail in

the end over any abstract reasoning whatsoever.'
To ground belief on principles of human nature rather than on proved conclusions of reason, however, was for Hume not the end of philosophy. suggested to him a science of human nature which should set forth in detail the ways in which men act and in which they come to believe in any matter of fact. Such things are with him the proper objects of philosophical inquiry. Only the method applicable to them should be carefully noted. The sub-title to his Treatise of Human Nature indicated what he conceived that method to he: 'an attempt to introduce the experimental method of reasoning into moral subjects.' That is, problems concerning man's heliefs and conduct are to be handled by observing how men behave under given conditions, and what actuates and moves them. Above all, the effects of probable conclusions hased on observed uniformities, sequences, and expectations are to be emphasized. For probahility rather than certain conclusions is the great guide in human life. This method has already guide in human life. been illustrated in the foregoing exposition. further and significant illustration of it is found in Hume's theory of morals.

'Those who affirm,' he says, 'that virtue is nothing but a conformity to reason; that there are eternal stnesses and unsitnesses of things, which are the same to every rational being that considers them: that the immutable measures of right and aron injose an obligation, not only on human creatures, but also on the Deity himself: All these systems concur in the opinion, that morality, like truth, is discern'd merely by ideas, and by their juxta-position and comparison. In order, therefore, to judge of these systems, we need only consider, whether it be possible, from reason alone, to distinguish betwirt moral good and evil, or whether there must concur some other principles to cnable us to make that distinction '(ib. bk. iii. pt. i. sec. i.). His own opinion is that, tested by experience, it is not reason alone that enables us to make the distinction. 'Morals excite passions, and produce or prevent actions. Reason of itself is utterly im-

potent in this particular. The rules of morality, therefore, are not the conclusions of our reason. they are conclusions from feeling and sentiment. 'Morality is more properly felt than judg'd of.

Again:

Virtue is distinguished by the pleasure, and vice by the pain, that any action, sentiment, or character gives us by the mere view and cootemplation. This decision is very commodious; because it reduces us to this simple question, Why any action or sentiment upon the general view or surrey gives a certain satisfaction or uneasiness, in order to shew the origin of its moral rectitude or depravity, without looking for any incomprehensible relations and qualities, which never did exist in nature, nor even in our imagination, by any clear and distinct conception. I flatter myself I have executed a great part of my present design by a statement of the question, which appears to me so free from ambiguity and obscurity' (iv. bk. iii. pt. 1 sec. ii.).

Thus we are brought to look for the springs of moral action, not in reason, but in a natural quality or disposition of human nature—the disposition to approve or disapprove actions as they affect us with a favourable or unfavourable view of the person acting, as they lead us to sympa-thize with him and his motives. Hume's theory of morals is thus neither hedonistic nor egoistic primarily. It is not essentially utilitarian, although considerations of utility are important for him. It is rather an attempt to show that morals are pre-rational, finding their origin in the emotions rather than in calculation. His theory is introduced by an elaborate and interesting study

of the emotions themselves.

Hume's method of dealing with religion is the same as his method of dealing with morals. His 'Natural History of Religion' opens with these words: 'As every enquiry, which regards religion, is of the utmost importance, there are two questions in particular, which challenge our attention, to wit, that concerning its foundation in reason, and that concerning its origin in human nature.'

Here, again, is the sharp contrast between reason and human nature. Human indeed admits that and human nature. Hume, indeed, admits that there is rational ground for the 'primary principles of genuine theism,' such as an intelligent author of the whole frame of Nature, but insists that what the majority of men believe about God is not founded on reason. The latter has a natural history which he attempts, with very insufficient data, to trace. Religion, according to him, hegan as polytheism, and arose 'not from a contemplation of the works of network but from a contemplation of the works of networks but from a contemplation of the works of networks but from a concern tion of the works of nature, but from a concern with regard to the events of life, and from the incessant hopes and fears which actuate the human These hopes and fears led men to helieve in many corresponding deities. The passage from polytheism to theism was brought about, not so much by any train of philosophical reasoning, as by a tendency to idealize the conception of Deity. There thus results a 'kind of finx and reflux in the human mind,' and 'men have a natural tendency to rise from idolatry to theism, and to sink again from theism into idolatry.' If religion had its origin in reason, such a flux and reflux would be impossible. Throughout this discussion of the natural history of religion, Hume lays little stress on the validity of religions belief. It is with him a characteristic belief of human nature, like belief in causation or in an external world.

The problem of validity is, however, discussed in his Dialogues concerning Natural Religion. A supernaturalist, a deist, and a sceptic are the pro-The argument protagonists in the discussion. ceeds with much acuteness. The principal point in dispute is not the existence of God, but how far we can, by reasoning from the character of the world, the events of history, and the good and evil fortunes of men, reach sound conclusions ahout God's nature and attributes. Are we entitled to infer any greater goodness and perfections in the author of the world than we find exhibited in the

world? Can we infer a providential guidance of the course of events, in face of the fact that a special care for one man's good is bound up with another man's evil? The outcome is inconclusive, befitting, doubtless, the literary demands of the dialogue rather than illustrating Hume's own convictions. He does not liesitate, however, to betray his own preference for the sceptic's position. The subject passes the power of human reason to decide. Arguments balance one another. His closing statement is perhaps the expression of his own attitude :

closing statement is perhaps the expression of his own attitude:

'II the whole of Natural Theology, as some people seem to maintain, resolves itself into one simple, though somewhat amhiguous, at least undefined proposition, That the cause or causes of order in the universe probably bear some remote analogy to human intelligence: If this proposition he not capable of extension, variation, or more particular explication: If it affords no inference that affects human life, or can he the source of any action or forbearance: And if the analogy, Imperfect as it is, can be carried no farther than to the human intelligence; and cannot he transferred, with any appearance of probability, to the qualities of the mind: If this really be the case, what can the most inquisitive, contemplative, and religious man do more than give a plain, philosophical assent to the proposition, as often as it occurs; and helieve that the arguments, on which it is established, exceed the objections, which lie against it? Some astonishment indeed will naturally arise from the greatness of the object: Some melancholy from its obscurity: Some contempt of human reason, that it can give no solution more satisfactory with regard to so extraordinary and magnificent a question. But believe me, Cleanthes, the most natural sentiment, which a well-disposed mind will feel on this occasion, is a longing desire and expectation, that heaven would be pleased to dissipate, at least allevlate this profound ignorance, hy affording some particular revelation to mankind, and making discoveries of the mature, attributes, and operations of the diviue object of our faith. A person, seasoned with a just sense of the imperfections of natural reason, will fly to revealed truth with the greatest avidity: While the haughty Dogmatist, persuaded that he can erect a compicte system of Theology by the more help of philosophy, disdains any farther aid, and rejects this adventitious instructor. To be a philosophical Sceptio is, in a man of letters, the first and most essenti

It should be noted, in conclusion, that Hume wrote many suggestive essays on social and political topics, which, however, have little historical importance. His *History* of *England* was a partisan document, based on an inadequate knowledge of the facts. It is significant, however, for its emphasis upon the social and literary interests of the nation as of equal importance with its political affairs.

as of equal importance with its political affairs.

LITERATURE.—The best modern ed. of Hume's works Is that by T. H. Green and T. H. Grose, In 4 vols., London, 1874-75.

L. A. Selby-Bigge has issued an ed. of the Enquiries (Oxford, 1894), and the Treatise (2nd ed., do. 1896), with an excellent topical index and critical apparatus. For his life, the principal writings are: J. H. Burton, Life and Correspondence of David Hume, Edinburgh, 1846; G. B. Hill, Letters of Hume to William Strahan, Oxford, 1833; and C. J. W. Francke, David Hume, Haarlem, 1907. Among the many philosophical studies of his-work, T. H. Huxley's 'Hume,' in the English Men of Letters scries (London, 1879), and W. Knight's 'Hume,' in Philosophical Classics (Edinburgh, 1886), deserve special mention. The Green-Grose cd. contains an elaborate critical introduction.

FREDERICK J. E. WOODBRIDGE.

HUMILITY.—The Greek word ταπεινός is one of those which, like apeakela, have been rescued and ennobled by Christian ethics (see Trench, Synonyms of the NT, Cambridge, 1854, S xlii.; T. K. Abbott, in ICC [Edin. 1897] on Eph 42; cf. art. 'Humility,' in  $H\overline{D}B$ ).

Humility is an essential Christian grace, and distinguishes the religion of Christ from that of paganism. For Christians to walk 'worthy' of paganism. their vocation is to walk 'in lowliness and meekness' (Eph 42).

'Paganism was not bumble, because to paganism the true God was but a name. The whole life and thought of the pagan world was therefore very naturally based on pride. Its literature, its governments, its religious institutions, its social organisation and hierarchy, its doctrines about human life and buman duty—all alike were based on the principle of a boundless self-assertion' (Liddon, BL, p. 500).

In the later Stoicism, self-reliance reaches its climax

in 'the deification of human virtne, the total absence of all sense of sin, the proud stabborn (Lecky, Hist. of Europ. Morals, London, 1869, i. 223; cf. Seneca, Ep. lxxvii. 8, where humility appears as a consciousness of weakness, disqualify. ing a man for the ligher spiritual rank). It is true that even in Aristotle's conception of the μεγαλόψυχος may possibly be discerned some elements of good: truthfulness of character and speech, magnanimity in overlooking offences, self-respect, and indifference to death (Eth. Nic. iv. 3, But it remains true on the whole that the highest and most inclusive 1 type of heathen virtue is essentially an exalted form of self-esteem, implying contempt of others. The μεγαλόψυχος is δ μεγάλων αὐτὸν ἀξιῶν ἄξιος ῶν. In the classical conception of virtue there is, in fact, 'an element of worldly wisdom which does not exclude selfrighteousness.' To a heathen the only check npon pride was the prudential consideration that the gods were envious of undue prosperity and hostile to insolence  $(\tilde{v}\beta\rho\nu_s)$  and self-exaltation. This is, of course, a commonplace of the Greek tragedians. A Greek might have assented to the maxim laid down by St. Paul in Ro 123 (φρονείν els τὸ σωφρονείν), but he laboured under a real confusion of mind, a real ignorance, as to the actual condition and true possibilities of human nature. In the gospel, humility is the natural fruit of the deepened insight which resulted from Christ's revelation of God, and of the personal example exhibited in the incarnate life. 'The sceptre of God's majesty,' says an early writer (Clem. ad Cor. 1. xvi.), 'our Lord Jesus Christ came not in the pomp of arrogance or pride, though He might have done so, but in lowliness of mind  $(\tau a \pi \epsilon \iota \nu o \phi \rho o \nu \hat{\omega}^{\nu})$ . Here we have the keynote of the change which Christianity produced in man's estimate of himself. It may be added that 'magnanimity' ranks as a genuine Christian virtue; it is not, however, identical with humility, though quite compatible with it. Aquinas regards it as a species of fortitude (Sum. ii. 2. qu. cxxix.).

1. In the NT, humility seems to be considered

under two main aspects.

(1) As a personal virtue.—From this point of view humility is that fundamental quality which view humility is that fundamental quality which places man in the only right relation to God. Humility, says Aquinas, 'strictly speaking, implies the reverence whereby man subjects himself to God' (Sum. ii. 2. qu. clxi. art. 3 resp.). Humility is the victory of truth in character; that just self-estimate which, while not depreciating personal gifts or excellences, always refers them to God as their true and only source. This just self-estimate includes both the sense of creaturely limitations and the consciousness of personal weaklimitations and the consciousness of personal weakness and sinfulness. 'Humilitas facit quod homo scipsum parvipendat, secundum considerationem proprii defectus' (Sum. ii. 2. qu. exxix. art. 3 ād 4).

Humility is thus the initial grace of the Christian life. Its fundamental place in character is taught by Christ in the first Beatitude (Mt 5<sup>3</sup>); and also in the injunction of Mt 18<sup>3</sup>, Mk 10<sup>15</sup>, Lk 18<sup>17</sup>. It implies 'the acknowledgment of God' and of what man really is in His sight, and thus includes: (a) the spirit of creaturely dependence and service. (a) the spirit of creaturety dependence and scrutch. Our Lord's great lumility was manifested in His assumption of the 'form of a servant,' as contrasted with the glory and sovereignty of His original and essential state as Son of God (Ph 27; see Corn. à Lap. ad loc., and cf. Joh. Damasc. de Orth. Fid. iii. 21). Further, in virtue of the union of His human nature with Deity, He who is one

1 Aristotle says (Iv. 8. 16): έοικεν ή μεγαλοψυχία οίον κόσμος τιι είναι των άρετων.

with the Author and Giver of all spiritual blessings became Himself a receiver, inferior to the Father 'as touching his manhood' and dependent on Him for all that was needed to sustain His manhood, to equip it for its redemptive work, and to advance its condition (see Hooker, Eccl. Pol., bk. v. ch. 54; Aquin. Sum. iii. qu. viii.). The unique characteristic of the Christian faith is the mystery of this self-humiliation; the fact that the pattern of humility is nothing lower or less than the incarnate life of the Son of God. Humility, then, in its primary sense is the spirit of perfect dependence on God.

By humility I understand such a spirit or gracious property in the soul of man or any intellectual creature as that hereby he does sensibly and affectionately attribute all that he has or can do to God, the Author and Giver of every good and perfect gift' (H. More, 'Of the Divine Life,' ch. xii., Theol. Works, London. 1703, p. 87).

(b) Holy fear or the sense of sin.—'The poor in spirit,' says Augustine, 'are the humble and those who fear God. Nor can beatitude have any other beginning' (Serm. Dom. in monte, i. 3). Pride or self-assertion is the root of sin; the beginning of wisdom is the fear which springs from the sense of personal unworthiness. Thus Bernard calls selfknowledge and the humility which it produces 'mater salutis' (in Cant. xxxvii. 1). Humility is the essence of a true conversion; it is the indispensable sccret of progress; it is the pledge of security, since even the grace already bestowed on the soul may be lost by pridc.

This has never been more forcibly expressed than in a famous passage of Augustine (Ep. 118 and Diosc. 22). He bids Dioscorus submit himself wholly and without reserve to the yoke of Christ, and tread no other road to the attainment of truth than that which was trodden by Him who, as God, saw the Infirmity of our steps. 'And that road is first humility, secondly humility, thirdly humility. . And as often as I was asked about the precepts of Christian religion, I should choose to answer nothing else than "Humility," though perhaps necessity would

compel me to say other things.'

(2) As a social virtue.—On the other hand, humility is commended in the NT as a social virtue, as, for instance, in Ph 2<sup>1-11</sup>. Humility is a form of moderation (cf. Sum. ii. 2. qu. clxi. art. 4). The point enforced by Christ's example in Ph 2 is that He did not insist upon rights which He might in strict justice have claimed. St. Paul implies that the desire for superiority, vainglory, and the spirit of partisanship are fatal to Christian unity and concord. The humility which honours all men and defers to them in quantum in cis aliquid inspicit de donis Dei tends to promoto the well-being of the community (Ro 12<sup>10</sup>, Eph 4<sup>1-3</sup>, Ph 2<sup>3</sup>). It excludes the envy which springs from comparing self with others (2 Co 1012); it encourages the spirit of contentment and mutual serviceable-The humble man will constantly recognize that any gift which gives him superiority over his fellows is in a measure due to the good influence of others—parents, friends, teachers, even enemies who have dealt candidly with his defects; and, further, so far from wishing to keep his virtues to himself he will wish that they were common as the air of heaven, that "all the Lord's people were prophets." Thus humility is a social virtue and may be regarded as an aspect of benevolence' (Rashdall, The Theory of Good and Evil, i. 206). Hence in the interests of peace, whether in the family or in the Church, the NT frequently insists on the duty of mutual subjection (e.g. Eph 5<sup>21</sup>, 1 P 5<sup>5</sup>). Further, as one great secret of effective social service is noticed that the secret of the secret social service is patient study of the conditions of each problem that needs solution, the teachable or humble temper is essential—the spirit which is willing to learn and observe before taking action. Bernard's observation is here in point, that the Church needs reservoirs rather than pipes ('Canales hodis in Feelesia multos lehamus combagy years). hodic in Ecclesia multos habemus, conchas vero perpaucas'). 'Men,' he complains, 'are nowa-

days so full of charity that they wish to pour out before they are full; they are more ready to speak than to hear, and eager to teach what they have not learned' (in Cant. xviii. 3). The scientific spirit needed in dealing with modern social problems is a spirit of humility, willing to put itself to school with facts, and mindful of Bacon's maxim, artem inveniendi cum inventis adolescere posse.1

2. The acts or offices of humility must necessarily vary with the particular states and conditions of men. The Benedictine rule, with its 'twelve grades' of humility, is briefly discussed by Aquinas Sum. ii. 2. qu. clxi. art. 6; see also the last book of Cassian's Inst., 'de Superbia'). In ordinary life the grace of humility takes such forms as are described by Jeremy Taylor (*Holy Living*, ch. ii. § 4). It is specially tested in a man's life with his equals.

'The hardest trial of humility must be not towards a person to 'The hardest trial of humility must be not towards a person to whom you are superlor, and who aeknowledges that superiority, hut towards a person with whom you are on equal footing of competition. . . . The relations to equals are thus the more real trial of humility than the relations to inferiors (Mozley, Univ. Serm., London, 1876, ix. 'Our Duty to Equals,' p. 220).

3. It may be noticed, in conclusion, that some

clear principles connected with our subject emerge in our Lord's teaching, and find an echo in common human experience.—(1) Docility or receptiveness—the temper of the child is a necessary condition of spiritual as of mental growth (see Passivity).-(2) The spirit of dependence is the condition of spiritual fruitfulness (Jn 155). The Christian ideal is not self-reliance, but unlimited confidence in the goodwill and co-operating grace of God at every stage of moral and spiritual progress. The Christian echoes St. Paul's confession: ἐπικουρία: οῦν τυχών της ἀπὸ τοῦ θεοῦ ἄχρι της ημέρας ταύτης ξοτηκα ( $Ac\ 26^{\circ\circ}$ ). The sense of personal insufficiency is never diminished in the true Christian. proportion to his growth in grace he realizes more perfectly his 'universal need' of God—his complete dependence on Christ, his all-sufficiency in Christ (Ph 41s; cf. 2 Co 12°). We may contrast the boast of the Stoic: 'Sapiens cum Dis ex pari vivit, Deorum socius, non supplex' (Sencea, quoted by J. Smith, Select Discourses, London, 1660, p. 390). Again: 'Dicam quomodo intelligas sanum; si se ipse contentus est, si confidit sibi' (Sen. Ep. 72).—(3) Humility is the way of exaltation (Lk 14<sup>11</sup> 18<sup>14</sup>). This is a saying of very wide scope. The supreme illustration of its meaning is seen in the Passical illustration of its meaning is seen in the Passion and Resurrection of Christ Himself. The condition of all real excellence is a just estimate by man of his own capacity, and of the greatness of the object at which he aims. The condition of acquiring the capacity to rule is service (Mt 20<sup>251</sup>). The hope of progress lies in that self-dissatisfaction and habit of aspiration which is the negation of pride (Ph 3<sup>7-14</sup>). Christianity, in fact, as Pascal points out (*Pensées*, pt. ii. art. 4), combines what had higherto cooperations. hitherto seemed contrary: greatness of character and humility.—(4) The principle implied in Lk 1618 and in 1 Co 48-5—the principle that what a man is in God's sight, that and nothing else he is. Humility implies a constant sense of the possible reversal of all human judgment. Hence humility is closely allied to Christian simplicity or single-mindedness, which aims simply at pleasing God (Ro 88, 1 Co 722 1 Th 4<sup>1</sup>), which strives after a goodness such as Hc can accept (2 Co 5<sup>9</sup>), and which recognizes everywhere the presence of an unseen Lord who searches the heart. So Augustine describes the ideal righteous man as being one who 'Deum ubique praesentem ita cognoscat sicht sancti postea

1 Cf. Huxley's maxim: 'Science seems to me to teach in the highest and strongest manner the great truth which is embodied in the Christian conception of entire surrender to the will of God. Sit down before facts as a little child, follow humbly wherever nature leads, or you shall learn nothing: ('Letter to C. Kingsley,' Life and Letters, ed. L. Huxley, London, 1900, L. 219). cognituri sunt' (de Spir. et Litt. 66; cf. Cassian,

HUMOUR.—The quality of humour shares in the mystery which attaches to all forms of human emotion. In its genuine manifestations it is as spontaneous as laughter, and as inexplicable. It mocks all attempts at definition. We can 'see' it, and possess it, and enjoy it, but cannot say with definiteness when it is not say in the s

with definiteness what it is.

The word itself has had a changeful history. Starting with the significance of moisture or fluid, it was employed in pre-scientific medicine to describe what were regarded as the four principal humours or fluids of the human body, viz. blood, choler, phlegm, and melancholy. It then came to denote a passing disposition, a transient mood or temper, because these were supposed to originate from the condition of the humours. When the mood was permanent or characteristic, it indicated what we call an eccentricity. To Dr. Johnson a humorist was 'a man with odd conceits,' and to Goldsmith 'an eccentric fellow.' In modern usage, humour is generally restricted to the sense of the ludicrous, or that power in man which enables him to see and enjoy what is amusing. (There are some grounds for suspecting that some of the dumb animals are not entirely destitute of it.)

The common opinion among modern psychologists is that the perception of the incongruous and the inconsistent is the cause or source of humour. It is invariably associated with alertness and breadth of mind, a keen sense of proportion, and faculties of quick observation and comparison. It involves a certain detachment from or superiority to the disturbing experiences of life. It appreciates the whimsicalities and contradictions of life, recognizes the existence of what is unexpected and absurd, and extracts joy out of what might be a cause of sadness. It acts as a check to onesided views of life, and champions the ideas of 'common sense' against the visionary aims of the idealist. It is complex in its character and action. It is 'essentially the gift of rising above the interest with which we [and others] may be engaged and reducing it to its limited importance, or even to its proper insignificance, in the great whole of things in which it is a part' (E. Caird, CR lxx. [1896] 818). Again, it sometimes exaggerates one special feature, or characteristic (as in caricature), so that it appears absurd, because out of relation to the whole to which it belongs; or it creates amusement by bringing into a temporary union ideas and things which do not belong to the same category. Bergson finds the source of the incongruity in the rigidity, antomatism, or distraction to which we are liable, and which hinders us from adapting ourselves quickly to different situations, or from moulding our actions in swift accordance with the varying demands of changeful life. contrasts between the ideal and the real, between the apparent dignity of man and the situations in which he sometimes finds himself, between the high aims which he sets before him and the poor measure of his attainment, the linking together of things and ideas which are essentially different these are the perennial founts of humour. sharper the contrast, and the more sudden the perception of it, the more intense is the emotion which is produced. Humour then relieves itself in an explosion of laughter. The element of surprise is an almost necessary adjunct of humour. Not infrequently the contrast involves a moral incongruity. It is this fact that places humour as a weapon in the hands of the reformer.

Humour and wit are closely allied. In general they find their subjects in the same sphere, but they use them differently. Humour is kindly, and in its genuine forms includes the quality of sympathy; wit is sharper and more apt to wound. Wit is a flash, humour is a genial glow; wit is intensive, humour is relaxing. Qualities of feeling predominate in humour, in wit qualities of intel-The boundaries of the two are somewhat indeterminate. The pleasure which humour evokes is more genial than that to which wit gives rise.

Humour assumes many forms: verbal humonr, the humour of the situation, the burlesque, the practical joke, satiric humour, sardonic humour,

and so on.

The sense of humour is nniversally desired, and is highly valued. No one will readily acknowledge that he does not have it. Without it man is scarcely human. It is a means of self-criticism, and saves from the folly of self-importance and the sin of self-righteousness. Personal vanity or pride cannot survive the possession of this self-corrector. It is a protection against excess; it fosters humility, and yet lessens the bitterness of failure and blundering. It softens the angularities of individual character and social life, and introduces a welcome charity into social judgments. It carries with it a tolerance which makes it a foundation of good reformables an essentially a social quality, and postulates an absorbing interest in life. The cynic may live makes it a foundation of good fellowship. alone; the humorist delights in company. cynic may be a pessimist, but pessimism is impossible to the humorist. In spite of his tendency to poke fun at the ideal, belittle the 'strenuous life,' and laugh at failure, he yet believes in the ideal. Humour tends to keep the heart young. As a criticism of social life and character it is invincible and invaluable. Humour is the inveterate foe of convention, and loves to make fun of Mrs. Grundy and all who follow in her train. It keeps social life from falling into ruts or from staying there when it does so. Many abuses which resist the combined assaults of reason, argument, and denun-ciation yield to the genial onslaught of humour, and fly before its shouts of langhter. Humour is an almost necessary quality in the reformer. Luther owed much of his success to his possession of it. It was also a prominent characteristic of Lincoln. The fanatic is destitute of it, and this may account for the fact that he generally fails. Humour of itself does not reform; it is only a force that weakens the strength of what is to be

changed, and prepares the way for the reform.

But, apart from its practical influences on conduct and society, it adds a joy to life without which life would be dull and poor. It is a relaxation and a delight to step aside for a moment from the schor grey and sclamp world, where from the sober, grey, and solemn world, where reason and order rule, into a realm where the whimsical, the incongruous, and the absurd hold sway, and summon us to laughter or play. These also are part and parcel of the life of the world. Some of the world's greatest benefactors have been its humorists. They brighten with a tonch of fun the horizon of life, which is often dark and dismal. They help us to see and to make life a gladsome thing. Even Dante named his great work the Divine Comedy, because he believed in a happy ending to the story of the world's life. In the closing paragraph of Plato's Symposium, Aristodemus reports that, when only reason and order rule, into a realm where the Symposium, Aristodemus reports that, when only half-awake, he heard Socrates say that the genius of tragedy was the same as the genius of comedy,

and that a true artist in the one was also a true artist in the other.

But humonr, like many of the powers and qualities of man, is capable of evil as well as of good. It has a tendency to coarseness and even obsecuity. Many of the humorous stories of the world cannot he repeated in decent society. Humour is often irreverent, and hurtful to the finer aspects of the emotional and spiritual life. The dreams which men cherish of higher and better things wither away under its mocking toneh. They may he called 'quixotic,' hut 'by these things men live, and wholly therein is the life of (the) spirit' (Is 3816). It may weaken the pursuit of a high ideal, because it sees the apparent futility of effort towards it. It may lead to the neglect of the more serious and noble side of life, and in its degradation treat the most solemn facts and experiences as subjects for langhter. who possess the sense of humour in a high degree are always in danger of being carried away by it. Their tendency to exaggeration makes us think that the humorist is not always to be taken seriously. We cannot accept the characterizations of Aristophanes as trne representations of the men and women of Athens in his day, nor can we regard Rabelais as a trustworthy exponent of human nature. Although humour is a basis of good-fellowship, when unrestrained it tends to destroy friendship. It may develop heartlessness and ally itself with cruelty. No one likes to be langhed at, but the humorist not infrequently enjoys the misery which his 'fun' ereates. indulgence in humour leads to levity, flippaney, and shallowness. It is a quality which needs to be rigorously restrained. Humour for humour's sake is depressing; it adds a burden to life. The buffoon and the clown are out of place as permanent features of this work-a-day world.

It is a curious fact that humour differs widely at different periods of the individual life and among different people. The humour of the schoolboy is an annoyance to him when he is grown up. One of the gulfs which separate the races of the world is their differing conceptions of the humorous. A series of books dealing with the humour of different nations of Enrope has been published by the Walter Scott Company, London—French, German, Italian, 1892; American, Dutch, 1893; Irish, Spanish, 1894; Russian, 1895. Outside of the particular nations to which the books refer, they are found to be dull.

they are found to be dull.

LUNINGARIANCE. There is not mych of a disc

HUNGARIANS.—There is not much of a distinctive kind that can be said about the religion of the ancient Hungarians. They worshipped the the ancient Hnngarians. They worshipped the usual objects of Nature. Their religion, like that of many other nomadic peoples, was a very low polytheism. Their gods were personifications of natural phenomena or of natural forces. The personification did not reach a bigh grade of evaluations of a polytheist and did not reach a bigh grade of evaluations. sonification did not reach a high grade of evolu-

tion, and the gods did not differ much from the phenomena, and possessed very little that could be called spiritual. There was a little more of a spiritual character attributed to their highest god, whom they called Isten (or Ishten), the conception of whom overshadowed that of the polytheistic 'little' gods. There were many 'little' gods: and the heathen Hungarians believed that the gods of the rain, the winds, life, death, winter, summer, the trees, the water, the day and the night, had a better and greater influence on human life and all its events than the highest god; and therefore they offered burnt-offerings to the 'little' gods, and thought that they were the counsellors of the highest god. They sacrificed especially white horses.

As to other religions tenets of the Hungarians, we know very little indeed. They had no elahorate system of theology, and the triumphant Christianity of the 11th cent. passed severe laws for the abolition of their rites, their hymns, and even their places of worship. But we know that they had a belief in a life heyond the grave. At the hurial of their warriors they took care that their horses and dogs should be interred with them. They also thought that the enemy slain in a battle by a Hungarian was bound to serve the Hungarian hero after his death. They held firmly that the highest god loved the brave, and the greatest virtue with which he could endow a man was bravery.

The priests of the Hnngarians were called tatos (or tahtosh), 'wise man.' They performed the sacrifices, said the simple prayers, sang of the great deeds of heroes. They resembled the Welsh bards somewhat; hnt they had less religious strength than the bards, and accordingly Christianity not only vancuished but almost extinated tianity not only vanquished but almost extirpated the old heathen religion of the Hungarians.

Among the modern Hungarians, fairies (tünder, 'apparitions') are, in older tradition, subject to a goddess named Furnzsina, and live in a far-away land of matchless beauty, though they still have mansions in this world (especially mountain castles) till vexed by mankind. They often entice away mortals whom they love. Fate-telling fairies (usually three, but also seven or nine in number) are also prominent figures in Hungarian folkbelief, dwelling near a spring, well, or brook. These fates are usually considered beneficent. Other fairies dwell in lakes and rivers, and there are, besides, mermen (vizi emberek) and mermaids, who often form love-unions with human beings. Many springs are regarded as holy, and drought follows if stones are thrown into them, while folkenstoms often retain traces of the wide-spread belief in the magic properties of water. Giants and dwarfs figure in popular helief; the former are, in general, kindly, and in their wonderfully beautiful palaces they live lives of model bliss and propriety. Unlike giants generally, the Hnngarian giants are wise, and are particularly distinguished by the fact that they keep their strength in a vat in the seventh cellar of their palaces, taking with them only what they may require. The chief function of dwarfs is to guard treasnre; but they take their third owner (they can he sold by one man to another) to hell. Obvious traces of an early fire-cult have survived, especially about the enstoms often retain traces of the wide-spread time of the snamer solstice. The winds are the children of the 'wind-mother' (Szélanya) or the subjects of the 'wind-king' (Szélkírály); and apoplexy is often called 'wind-stroke' (szélütés). apoptexy is often called 'wind-stroke' (szélülés). Generally speaking, however, the belief in diseased demons is rather attennated among the modern Hungarians. In regard to Hungarian ideas concerning fate, it is noteworthy that the old term for casting lots is nyilazni, 'to shoot an arrow.'

Before the fates have decided the future of a child, witches may decree it an evil destiny, though this may sometimes be ameliorated. The life of each man is predestined, but, if at midnight one throws gold coins away at a cross-road, he who picks them up surrenders to the other as many years as he takes coins. Traces of foundation sacrifice still persist, the heads of horses or dogs, or the bones of a raven or black cock, being buried in the foundation of the building.

The dog and the wolf were sacred animals to the ancient Hungarians, who made oath by them. After death shepherds and horse-keepers who have sufficed wrong during life, as well as those who have been brought to harm by perjury of others, are transformed into wolves, horses, and dogs respectively; and in these forms they obtain

requital for the injustice done them.

Folk-charms are numerous, and whatsoever has appertained to, or come in contact with, the dead has magic potency, which may be used either for beneficent or for maleficent purposes; while the hair, blood, etc. of another gives him or her who secretly obtains it power over its original owner. There is a firm belief in witches, changelings, etc., part of which may be borrowed from neighbouring peoples, but much of which may equally well be an inheritance from the pagan period.

A. SZABO.

HUNTING AND FISHING.—In the history of culture the hunter as a representative of a stage of development in human progress stands between the collector who depends entirely upon the provision of Nature for the roots, fruits, eggs, insects, etc., which he gathers while making no effort to ensure his food supply in the future, and the herdsman whose means of livelihood are his flocks or herds of domesticated animals. By a hunting community must be understood one in which the principal source of food supply is the flesh of wild animals killed or taken in the chase. In an early stage of social development, such a community will continue to employ the methods of the collector for vegetable food. The Tasmanians did not practise agriculture, nor did the aborigines of Australia, except in the west, where the cultivation of practice agriculture and the boads of the tion of purslane is recorded and the heads of the yams were re-inserted in the ground after the plants had been dug up. Some races, however, while still in the hunting stage, have cultivated the ground, even though by such primitive methods as those of the Bushmen. The Indians of North America, excepting the Pueblo Indians, at the time of their discovery were hunters, but practised agriculture to a certain extent, the cultivation of the ground being left to the women. Further, although hunting and fishing may no longer constitute the characteristic industry of a community, and may come to be regarded as a sport, as in dynastic Egypt and other countries of high civilization such as Persia and India, the methods of the primitive hunter survive, and in many cases are the principal or only means of providing a supply of animal food. Throughout the greater part of Africa the peoples, according to the character of their environment, are either agriculturists or herds. their environment, are either agriculturists or herdsmen; but, as they do not, as a rule, eat their cattle, 1 A. O. Gregory, JAI xvl. [1886] 181.

they are compelled to rely upon the chase for fresh meat. It is not uncommon in such cases for the hunters to be a class apart, as, for instance, on the Congo, where men are chosen to lead hunting expeditions on account of their special skill, or in Uganda, where there are professionals, the sons of hunters, trained to the chase from an early age. who do nothing else.

In a hunting community, the conditions of life are not such as to favour either a high standard of, or progress in, culture. Climatic conditions, as a rule, are such as either to absorb the whole time and energy of the people in the provision of the bare necessities of existence, as in Australia, the Tundra region of Asia, and in the extreme north and south of America, or so little effort is required to secure a livelihood, as in the tropics, that it affords no stimulus to advancement. An almost equally effective check on progress is the migratory character of the hunting community, necessitated either by the seasonal movement of the game or by its scarcity. As a consequence, habitations are usually of a flimsy and temporary character, except where the rigour of the climate demands protection against cold and storm; the number of individuals forming the group is comparatively small, because a wide extent of country is required for the support of each member; and social organization is loose, because the solitary hunter has not yet learnt to appreciate the advantage of co-operation and subordination. Authority, in so far as it exists at all, rests with the old men or tends to centre in the skilled hunter.

The natives of Australia, when on their hunting expeditions, erected shelters of interwoven boughs, and, although it is not correct to say of all the trihes that they erected no permanent habitations, some of them, especially in the south and west, lived in huts which were little more than windbreaks. The Bushmen wandered about in small groups; they had no chiefs, and their habitations were screens made from the boughs of lived in huts which were little more than windbreaks. The Bushmen wandered about in small groups; they had no chiefs, and their habitations were screens made from the boughs of trees. Among the Andaman Islanders the sites of the encampments were determined largely by their fitness for the pursuit of game and fishing; I of their three types of habitations, the temporary shelter, consisting of a lean-to roof of palm-leaves affixed to two posts, was prohably at one time the only form in use; the authority of their chiefs was very restricted; and the group numbered from fifty to eighty individuals. The Negrillos of Central Africa, the rock Veddas, the wilder Semang of the Malay Peninsula, and the nomadic Actas (Philippines) may be mentioned as further examples of the primitive culture and social organization of the small hunting group. In North America the trihes were all hunters or fishers, with the exception of the trihes of the south-west, but exhibited considerable variety in culture and social organization. Many practised agriculture, especially in latitudes where the maize ripens. The Shoshones had a very loose social organization and an almost entire absence of ceremonial. The Yuma and Seri of California were both at a very low stage in culture; the latter ate their food for the most part raw, had no domestic animals except dogs, and did not practise agriculture. On the plains the buffale was the chief staple of food and material of industry. Here the social organization was of a more stable and closely woven character, and the chieftainship was acquired by merit; this was no doubt to some extent due to the fact that the methods pursued in hunting the buffalo required concerted action and subordination. The Algonquins and Iroquois of the northern woodlands practised agriculture, and had evolved a highly organized machinery of government. In South America, the Arawak of Guiana, the Botocudo and Bororo of Brazil, the Tehuelche, and the Fuegians—to mention instances only—are nomads with a loose trihal organizat

generally, of a rude type, the implements and weapons which he has devised to meet his needs 1 E. H. Man, Aboriginal Inhabitants of the Andaman Islands, London, 1883, p. 126.

indicate a remarkable capacity to adapt himself to his environment, and, within the limits of the available material, to provide himself with the means most suitable for the attainment of his end.

The use of the bow and arrow is almost universal, the blunt arrow being employed in many localities for killing birds. This weapon, however, is not found in Australia or in most parts of the Pacific, except occasionally as a toy. Knives occur in a variety of forms as well as spears. It is, however, in the weapons of a more restricted distribution, devised to meet special circumstances, that the ingenuity and adaptability of the primitive lunter have been most strikingly displayed; as, for instance, in the case of the harpoon, of which the essential feature is that the head should come apart from, but continue to be attached to, the shaft when it strikes the quarry, to mark its position in water, or hamper its escape on land. The blowpipe, used with light poisoned darts, which is found in South Eastern Asia—the Malay Peninsula and adjacent islands-and in the forest regions of South America, and was at one time used in parts of the southern United States, is another example of a weapon admirably adapted to meet special conditions, and especially fitted for use in killing small birds and monkeys in a dense forest country.

It is not merely in devising weapons that primitive man shows this peculiarly acute quality of mind. The methods and devices used in hunting, trapping, and fishing show a capacity for close ob-servation of the habits and psychology of wild animals which, with ready ability, has been turned

to full advantage.

Hunting, when considered from the point of view of methods and apparatus, resolves itself into a question of the means by which man seeks to overcome the strength, flectness of foot, capacity for flight, cunning, timidity, or aptitude for conceal-ment of the animal world. In its simplest form the acquisition of animal food does not differ materially from the earliest method by which a primitive community procures its supplies of vegetable food: in

munity procures its supplies of vegetable food: in each case, the process is one of simple collection.

In Australia and the Andaman Islands, mussels and shell-fish are gathered at low tide by hand. The 'kitchen middens' of the Neolithic age in Denmark, the shell-mounds of Patagonia, of the Western coasts of hoth South and North America—to mention instances only—are relies of a population which at some time existed wholly or for the greater part by this means. The collection of insects, grubs, or birds' eggs, especially sea hirds' eggs, involved as a rule no special measures. Sometimes the birds themselves were taken from the nest by hand, as the natives of Gippsland took the cockatoo. In California, in Tasmania, and in Australia on Lake Alexandrina, shell-fish were obtained by women by diving. The Eskimos of Alaska have heen known to catch a seal simply with the hands as it tried to secape across the ice. The Australian women catch flounders, mud fish, and the like under the soles of the feet while wading. The beginning of the use of appliances in fishing may he seen in this hranch of a tree employed hy tribes of the north-west coast of America to dip up hish spawn from the water, and in the gunny bag held in the water by the Australian women, when this river is in flood, to catch small fry as they swim down stream. In these cases, no pursuit of the pray is involved, and this is also the case when, either by accident or as the result of observation, the prey is found in its lair. In California, the Indians used to cut down trees, sometimes as many as nine or ten, one after this other, in the hope of finding a squirrel in its nest. In Australia, the bark of the tree was examined for marks of the opossum's claws; when its nest was found, the animal was dragged out and killed.

Failing the discovery of the lair, the huater stationed him-

the opossum's claws; when its nest was found, the animal was dragged out and killed.

Falling the discovery of the lair, the huater stationed himself at some spot which, to his knowledge, was frequented by the animal, either a water-hole or a track leading to the water-hole, or some spot at which it came to feed. In the Torres Straits, the native, having observed the invariable route by which pigeons return from their feeding-grounds day hy day, stations himself in a tree near their line of flight, and with a long slender stick attached to his wrist knocks the birds down as they pass. In Hinchinbrook Island, fires were built under the trees in which the hirds roosted, while on the Tully river cockatoos were knocked off their roosting-places at night with a long cane. In the winter the Eskimo takes advantage of the bahits of the seal and waits hy the holes at which it comes ont to hreathe, or, later in the year, spears it as it basks in the

The Ekoi huild platforms on the trees visited by the bush sun. The Ekol hulld platforms on the trees visited by the bush heasts, from which they kill the animals as they eat the fruit on the ground below. It was, however, is running down animals that the savage hunter displayed the greatest endurance. The Australian hunter captured the kangaroo by pursuit only, following it until it was exhausted. The Tasmaalans ran down the emu, and the natives of Hawaii the goat. The Wailaki Indians of California hunted the deer on foot, men mosted at intervals along its trail taking up the following in posted at intervals along its trail taking up the following in

The pursuit of wild animals with the object of securing the prey by tiring it out demanded exceptional speed and endurance, while the result must, not infrequently, have been disappointing. Primitive man has, therefore, preferred, as a rule, to rely upon other means of approaching sufficiently near to his prey to enable him to disable and kill it. Both tracking and stalking require highly trained powers of obscrvation combined with great skill to avoid attracting the attention of the quarry through its senses of smell, sight, or hearing. Record has frequently been made of the ability with which primitive peoples move noiselessly through jungle and forest without disturbing a twig.8

Most hunting races, however, do not rely entirely upon their own skill in tracking; they have utilized the natural instincts, speed and scenting

powers, of the dog.

powers, of the dog.

The Australians employ the dingo in hunting the opossum, emu, and kangaroo. In huating the musk ox, the Esklmo dogs outstripped their masters and held the animals at bay until the latter came up. In the Malay Peninsula only the wild trihes use the dog. The Benua-Jakun, while floating down a stream in his canoe, seads his dog through the woods along the bank to huat the mouse-deer. In Southern Nigeria the Ekoi also train their dogs to hunt by themselves. Both the Boloki (Congo) and the Ekoi perform certain rites over the dogs before they are free of the bush, to make them courageous and of keen scent. The huating leopard of India and Persia and the hawk in Europe and in Tartary, as recorded by Marco Polo, are other instances in which the natural instincts of animals have been utilized by man in huating. In fishing, the employment of the remora, or sucker-fish, by the natives of the Antilles and the Australians to hunt the turtle or dugong is a curious analogue.

In approaching the quarry, advantage is taken

In approaching the quarry, advantage is taken of shelter, both natural and artificial. The Australian, when hunting duck, swims beneath the surface of the water, while breathing through a reed. On the Nile, the ancient Egyptians binted duck in much the same manner, covering their heads with a calabash; while in China it used to be the custom to catch swans by placing a basket containing bait on the head of the swimmer. Convenient trees, shrubs, or tufts of grass were used to cover the approach of the hunter; some-times branches, small bushes, or bunches of grass were carried in the hand. The Bushman crept up behind a grass screen to the herds of antelopes, ostriches, or other game; the Australian used a screen of bushes, or in some districts a collar-like head-dress, when stalking the emu.

head-dress, when stalking the emu.

The appearance of the animal to be caught is frequently imitated.

The Bushman hunted the quagra, which grazes with the ostrich, by covering bimself with the skin of one of these birds, imitating their action in feeding by means of a stick thrust up through the neck. Among the Dogrib Indians, two hunters covered themselves with the skin of a reindeer, the first holding in his hands hushes against which he rubbed the head of the animal in imitation of its action in feeding. In North America, in driving the huffalo one of the hunters, dressed up in a buffalo skin, enticed the herd to the edge of the precipics towards which it was desired to drive them.

Various forms of decoy were employed.

A method frequently used in Australia was to fasten a wounded hird to a tree. It then attracted others by its cries.

4 Talbot, 147; J. H. Weeks, Among Congo Cannibals, London, 1913, p. 283.

Bometimes the cry of the bird was imitated by the hunter. The Botocudo attracted the crocodile to the bank by rubbing its eggs one against the other. Another form of decoy was an imitation of the action of the prey of the bird or animal. The Australians attracted pelicans by throwing shells into the water, imitating the splashes made by small fish.

The use of sparce usually set in a path free

The use of snares, usually set in a path frequented by game or at the approach to a water-hole, is wide-spread. The initial stage in the use of bait, snare, and trap is seen in a method adopted in New South Wales to catch birds of prey by attracting them with a piece of fish held in the hand of a man who pretends to be asleep, and in the practice of catching cormorants by posts set in the water upon which the birds alight and are noosed by the hunter who swims out to them. A somewhat similar method is employed by the Eskimos in catching gulls: a hunter stationed inside a snow hut with a transparent slab of ice in the roof catches the birds by the feet as they alight on the top. The noose appears in its most highly developed form in America as the lasso of the American Indian; another appliance similar in its action of entangling but with the addition of the action of stunning is the bolas, a weapon found among the Eskimos and in South America, which consists of a number of ropes fastened together at one end and each having a weight at the other end. The noose anticipates the use of the snare, whether it is used in the hand, as in the capture of the crocodile in Northern Australia or in taking the turkey bustard in Queensland, or attached to fixed posts—a method followed, also in Australia, in catching duck—or fastened to a pole held in the hand, as the Californian Indians caught birds and the Panamint Indians the lizard, after its attention had been attracted by a grass-hopper at the end of a line on a rod. The use of bird-lime, though hardly falling within the cate-gory of a trap (a term which usually connotes some hidden mechanism), represents a simple form of self-capture. On the Tully river in Australia, the natives catch cockatoos by placing bird-lime on the roosting branches. The Semang, the Berembun, and the Jakun use bird-lime; the Besisi fix rattans smeared with bird-lime on notches cut in trees for the purpose, while the Sakai catch large numbers of gregarious birds, such as the padi bird, by limed strips of rattan spread on the ground. An analogous device employed by the Semang consisted of strips of bamboo smeared with poison and spread in the paths.2

In the Malay Peninsula and in Borneo, advantage is taken of the argus pheasant's babit of rooting up grass to clear its dancing ground, by fixing sharp-edged strips of bamboo in the ground, which cut the throat of the bird when it tries to pull them up.<sup>3</sup>

In Australia, advantage was taken of the wallaby's habit of running with its head down, to stretch nets across its path. It was also caught in pits designed to break its legs. The pit with sloping sides is frequently employed, especially in taking big game, a common practice, as in the case of the pits of the Boloki on the Congo, being to put prongs or spikes of wood at the bottom to injure or kill the animal. The pits are concealed by rushes, boughs of trees, grass, or leaves, or sometimes a board, which the weight of the animal breaks down or tilts. In Central Africa, in the case of buck, fences, sometimes miles in extent, were built to guide the animal to the pit.

A 'foot-trap' used by elephant hunters in Uganda was a deep bole slightly greater in circumference than the elephant's leg, at the bottom of which was a sharpened stake in which a deep notch had been cut. This spike was broken off by the animal's

struggles to free its leg, and rendered It lame. A form of trap or snare used in Tibet, Uganda, and other parts of Africa, was a ring made of creeper or other material in which were set sharp thorns, spikes, or pieces of wood or bone pointing inwards. This was fastened to a stake and then placed in or above a small hole. Another common form of trap is that in which a catch is released by an animal passing along a path. The guillotine trap, of frequent occurrence in Africa, is a heavy log with a sbarp spear-head, sometimes poisoned, set in one end, suspended from a tree. This was commonly used for big game, e.g. in the Bulemezi district of Uganda, for elephants, and by the Anjanga for leopards and lions. Closely allied to this form is the spring trap, the spring usually being a sapling bent the Anjanga for leopards and lions. Closely allied to this form is the spring trap, the spring usually being a sapling bent down over or near the path and fastened with a twig, which, on release, tightens a noose around some part, usually the leg, of the animal. Among the Anjanga, the release was a gate like arrangement designed to catch a buck by the leg or a small animal by the need. animal by the neck.

In another form of release trap, the spring may set in action a bow and arrow, as among the Gilyaks, who use a crossbow or a spear, and in the Malay Peninsula by the Sakai and Senang. The Mantra placed a poisoned spike at the end of the sapling which formed the spring. An effective combination, consisting of a fence with spear-traps set in openings at regular intervals, leaved by the Level with the combination. of a fence with spear-traps set in openings at regular intervals, Is used by the Johor Benua and Berembun tribes. Snares and traps have at all times been much used in North America. Among the Dénés, the beaver is caught by a net let down into its run under the ice. The traps in which the tribes caught martens, lynxes, foxes, and even bears, are mostly variants of the figure-of-four release, in which, on the animal taking the bait, a cross-bar or other appliance falls and causes death. The net may be used simply as a snare or fence, being stretched across the path which an animal is expected to take, or it may be manipulated by hand. The Euahlayl tribes of Queensland in catching pigeons employ a net, one side of which is pegged to the ground, the other fastened to a rod, throwing it over the birdsas they settle on their water holes. In ancient Egypt the clap not was used in catching duck.

In some of the cases mentioned above pits and

In some of the cases mentioned above, pits and other forms of traps are used in conjunction with a fence intended to make the capture of the animal more certain by guiding it to the trap. Fences of nets or stakes are frequently used with this object in view, but, instead of success being dependent upon the chance wanderings of the animal into the enclosure, it is made to depend upon the efforts of the hunters themselves, who entice or drive single animals or herds into the snares or between the fences. The operation of driving is one of the most frequent methods of organized hunting employed among primitive peoples, when once the advantages of co-operation have been appreciated. The numbers employed may vary from two, three, or four, the number required for duck-driving in Australia, to the 60,000 mentioned as engaged in the great hunting expeditions of the Incas, when 30,000 head of game would be taken.7

30,000 head of game would be taken. In Western Australia, at the moulting time of the black swan the natives lay in ambush, and, when the birds were sufficiently far from the water, they cut them off. A more elaborate method was used in driving duck. A net was stretched across the river or stream, the ends being fixed to posts. Some of the party went up stream and drove the birds down. When the ducks approached the net, they were frightened and caused to rise, while one man whistled like a duck hawk and threw a piece of bark in the air in such a way as to imitate the flight of that bird. The flock dipped, and many were caught in the net. Fire was not infrequently used to assist the

Fire was not infrequently used to assist the hunter either by driving or by confusing the game. The Seneca hunted deer by night in cances in the bows of which lights were fixed. At Puget Sound, elk-deer and water-fowl were hunted by torch-light, while the Plains Indians drove the buffalo to the corral by fire. Fire was used in Australia and Tasmania for driving the kangaroo.

The Eskimos and other peoples of the northern parts of North America used sometimes in hunting deer to draw a cordon across a peninsula and drive the animals into the water, where they were easily dispatched by hunters in canoes. Permanent stone

fences for driving the deer were erected near the track usually followed by them in the annual ground. autumn migration from their northern feeding-

ground.

The Selanger Sakai make frequent use of game-fences, which they hulld of sticks placed in rows with palm leaves across. These are constimee as much as 500 yards in length.\(^1\) In Uganda, hunts on a large scale were sometimes organized among the peasantry. Nets stretching over a considerable extent were set up, towards which game was driven with the aid of dogs and then killed hy men stationed at the nets.\(^2\) The Klool of South Nigeria, in driving game, use nets which, when joined togother, extend for half a mile. These are stretched across the land between the rivers which join to form an angle.\(^3\) In Africa the drive was frequently made without net or fence: the hunters surrounded the piece of scruh or hush in which the game lay, and advanced upon it with shouts at a given signal. game lay, and advanced upon it with shouts at a given signal. This was the method followed by the Central African tribes, the leader, carrying the 'medicines' for luck, being in the middle of the line, and in Uganda in the lion hunts organized by order

of the king.

In North America the drive was the most favoured method of hanting the hison. Herds of hison were driven over crags and preciplees, hut the method more commonly employed was to erect a huge corral, such as was and is still used in Burma in hunting elephants. The huffalo corral was circular. A whole tribe would take part in these drives, and, as soon as the berd had heen driven into and sbut in the enclosure, women and children climbed on the palisading and speared the animals as children climbed on the palisading and speared the animals as they galloped round in their endeavours to escape. After the introduction of the horse, the Indians, among whom the

the introduction of the horse, the Indians, among whom the Comanches excelled as horsemen, not infrequently ahandoned the corral. Dividing their hand into two divisions, they galloped round the herd upon which they closed at a given signal, or else pursued it as it tried to get away.

In ancient Egypt the king frequently took part in hunting wild cattle. The herd was surrounded by troope and people of the neighbouring villages and driven into enclosures. Amendotep III, recorde with pride his achievements in this form of sport, and mentions that, on one occasion, he himself slew seventy-six cattle in one expedition.

In fishing, so far as circumstances allow, the same methods are applied mutatis mutandis as in hnnting. The collection of shell and other fish and the simple operations of catching fish with the feet or hands have already been described. The use of bait, or bow and arrow, spear and harpoon, the devices of attracting fish by the reflexion of fire, by splashing, capture by the net, trap, and the driveall present analogies to the means employed in

hunting animals on land.

One of the most primitive appliances used in fishing, probably representing the earliest dip-net, is the bough of a tree, covered with leaves, which is used to dip up fish spawn on the North Pacific Coast. Most primitive races use some form of dip-net, either to take small fry or to catch fish driven into shallows by other means. At Nutka Sound, sardines were driven into shallows and scooped up with troughs and wicker baskets. A special form of hand-net was need by the Anjanga on Lake Nyasa, which had two handles working scissors-fashion. The ordinary form of hand-net occurs in Australia and in the Malay Peninsula. A very simple form consisted of a basket of bamboo strips used by the Kedah Semang to catch small fish in pools.6 At Cook's Inlet, the Kenni used the dip-net to scoop up salmon from stages built in the river. Some doubt was expressed as to its occurrence in America before the advent of the white man, but Cushing dug up a dip-net at San Marco, Florida, while there is little doubt that in Washington it antedates European influence.7

The net, in its various forms, is the means upon which primitive man most commonly relies to supply himself with food from sea and river.

The Andaman Islanders at one timo nsed nets cighty feet in length and fifteen feet in depth, with stone sinkers and stickfloats, to each of which was attached a cane leaf. The fish were driven to the net by splashing the water, and speared. In Australia, on the Diamantina, the natives use nets some twenty feet long fastened to two poles. Twenty or thirty of these nets

1 Skeat-Blagden, L 213. <sup>2</sup> Roscoe, 488 f. <sup>4</sup> Werner, 186. are used together, each heing worked by two men, who swim out into the river. As a rule the net in Anstralia had no floats or sinkers, although the use of them is recorded on the Darling. The Indians at the mouth of the Fraser River used reef-nets with etone sinkers and cedar-wood floats to catch salmon. On the flats they used the seine net, dragging it over the shoals hetween two cances. In pre-conquest days in Sonth America the net was used both on Lake Titicaca and among the coast tribes. The immigrant strangers, who, according to tradition, landed on the coast of Peru, used nets for fishing.

The fish trap is distributed almost as widely as

A primitive form of trap in use among the Australians is a hollow log which is put down in a stream for some hours. Baskets and cages are also used. On Lake Kioja on the upper reaches of the Nile, among the Bakenl, who make their living entirely by fishing, exchanging the fish they do not eat for grain, the men use the fish trap only, while the women use the rod and line.

On the upper reaches of the Fraser and Thompson rivers the Dénés and Carrier Indians use fish traps, among the former hottle-shaped haskets in connexion with a weir; If it is not possible to build a weir across the stream, a pen or corral is huilt, into which the fish are driven by splashing the water. Basket traps are fixed at one side of the weir, into which the fish swim in trying to escape. An ingenious form of trap is a pot-hanger basket, a screen-like erection at the top of a fall; as the fish in ascending the river leaps the fall, it strikes the screen and falls

basket, a screen-like erection at the top of a fall; as the fish in ascending the river leaps the fall, it strikes the screen and falls into the curved pocket at the bottom.

Catching fish by means of a weir, whether in a trap or otherwise, Is of frequent occurrence. In Anstralia, dams and weirs were built across streams, in which nets were fixed, or npon which platforms were built. The platforms were covered with boughe in which the fish became entangled. One of the most famoue weirs is that at Brewarina on the Darling, sixty-five miles ahove Bourke. It is eighty to a hundred yarde wide, and extends for over a hundred yards along the course of the river. It is hullt of stone, le three to four feet high, and consists of a lahyrinth of circles and passages in which the fish become entangled and are caught by hand. Stake or hish fences were also hullt. Movahle hush fences were sometimes extended across a water-hole, to which the women drove the fish with bunches of grass and leafy boughs. 7

Poison is often used either to stupely the fish, making it possible to take them by hand, or to drive them from their places of refuge. It was employed by the Australians; and in North America it was used throughout the Sonthern States. The Californian Indian used soap root after cutting off the water. The use of some kind of vegetable poison is recorded among the Pima, the Tarahumare, the Payas of Honduras, the Moguexee of Columbia, the Peruvians, and the trihes of Brazil and the Amazon. The Gan on the Upper Nile use poison after the rains when the rivers are full. 10

Many peoples took advantage of the fact that fish are attracted by the reflexion of fire, to fish by night, as did the Californian Indians.11 In Australia (Victoria) a torch is fixed in the bow of the canoe. While it is paddled up stream, a man sitting with his back to the light spears the fish as they swim past him.12

The rod, though recorded among a number of peoples, is not very frequently employed. It is in use among the Kedah Semang. Among the Benua-Jakun and the Besisi (who, like the Anjanga, attract the fish by striking the water with the top of the rod), angling is left to the women and children; sometimes its use is confined to women, as among the Nilotic tribes 13 and on the Murray in Australia.16

The hook used in Africa is usually a piece of bent wire. Anstralians used many different materials. A thorn probably represents the carliest form of hook, and is still used with a fire represents the carriest form of note, and is still used with a fine in the Malay Peninsula, but the Anstralian native used fire tendrils, eagle-hawk talons, tortolse-shell carefully moulded by hot stones, etc. The material requiring most care was the beautifully made hooks of this material were the rearriers long process of patient grinding, piercing, and polishing.

When the game has been taken or killed, disposal of the carcass is, as a rule, dependent z a generally recognized custom; usually it becomes the property of the man who first wounded the animal, but the distribution of the various parts

of the body is not always in his control, and frequently must also be in accordance with custom.

quently must also be in accordance with custom. For example, in Australia among the Kurnai, a catch of eels was distributed among a man's relatives, a large eel each being given to his mother and brother, and a small eel to his brother's children and to his married daughter. The Ngarego man, in cutting up a hear, was allowed to keep the left ribs for himself, but the remainder was distributed among his parents and relatives, certain joints being allotted to each, and the head being given to the bachelors' camp. Other animals were treated in the man way.¹ The same principle is followed among the Ekoi, except that one leg belongs to the townstolk—no doubt a survival of a communal division.² In Uganda, certain joints were allotted to the men striking the first and second blows, the owner of the land on which the animal was killed, and of the dog which pulled it down. The boaes of an animal were given to the god of the chase, while the head was eaten on the field, as it could not he taken into a garden or house hecause the ghost of the nnimal taken into a garden or house hecause the ghost of the nnimal was believed to be attached to it.3

was believed to be attached to it. 3

Rights of ownership of the land or hunting rights over the land are important in the hunting community and clearly recognized. In New Guinea, at Waga-Waga and Tubc-Tube, the reefs near a hamlet are regarded as its special property; when the old men of the hamlet have placed a tabu on them, no member of mother community will use them for fishing. If there should be no sign on the reefs, any one may fish from them, hut the hamlet shares in any fish taken. 4 Among the various Nāga tribes of Manipur and among the jungle tribes of the Malay Peninsula, the sites of fishing weirs are held to be the property of the village near which they are situated. In Manipur, if an animal is killed on ground regarded as the property of another tribe, it is usual to send a portion of the kill to that community. 5 On the Congo, the Boloki usually send the head of the animal to the headman of the town on whose ground they kill. 6

Among many hunting peoples certain animals or certain parts of animals are not eaten, either by constom, for which various reasons are assigned, or

enstom, for which various reasons are assigned, or by an express tabu. The most familiar instance is the very general prohibition against eating the flesh of the totem animal. Some peoples do not as a rule cat the flesh of wild animals, e.g., the agricultural Akikuyu of West Africa, although under the influence of the Akamba they are beginning to do so; fish they still avoid as making them unclean.

so; fish they still avoid as making them unclean. Among the Nandi, most of the clans have some prohibition laid upon them in connexion with animals. The Kipolis clan may not make traps, and, although its members may hunt, they may not wear the skins of wild animals except the hyrax. The Kepumwi clan, which lives by the chase, may not eat the dulker or the rhinoceros; other claas may act eat game at all, and so forth throughout. Although fish is the chief staple of diet of some of the Déné tribes, others despise it as food; while among the southern tribes, e.g. the Navahos, even contact with fish is regarded with horror. The Ekoi will not eat the fiesh of n certain white spotted antelope, except after an elaborate ceremony to make the flesh fit for consumption; a woman is hound to give her husband part of the catch, but certain fish he must not eat or he will be killed in the hush; nor must a woman eat an animal caught in her husband's new trap. The Eskimos will eat the flesh of the musk ox only in the last resort. In Australia, a complicated body of rules limited the parts and species which might he eaten by boys, young men, girls, married women, and so on. Among the Wotjoballuk, for instance, boys might not eat the kangaroo, while men under forty might not taste the flesh of the emu or bustard. The penalties for transgression varied from grey hairs to death while uttering the cry of the animal eaten, the spirit of which had entered the body of the transgressor. The belief that an animal possessed a ghost or spirit was also responsible for the Baganda custom of drawing the nerve from the tusk of the elephant, in which it was helieved the ghost resided. This

of drawing the nerve from the tusk of the elephant, in which it was believed the ghost resided. This was buried and the place of burial marked with stones; because, if any hunter stepped over the place, the ghost would cause him to be killed by an elephant in the next hunt. 13

Reluctance to kill a certain species is not always explained as due to religious feeling or to a tabu. It may be the result of a transference to animals of modes of thought proper to man. This may be

illustrated by the primitive attitude of mind towards such of them as might be able, if animated by human motive, to avenge the death of a member of the group. Hence the reluctance shown by the Dayaks and Malagasy, for instance, to kill the crocodile except in a blood-feud and with special observances.1

In Sumatra the Menangkabauers follow the same custom in relation to the tiger. Animism and sympathetic magic play a large part in the practices followed before and during the hunt. Some, however, may be due to a chance collocation of circumstances, as the Dćné's preference for an old net or other appliance with which he has previously been successful; or they may form part of a general complex of religious beliefs without any special meaning in relation to hunting or fishing, as in the case of the various abstentions, such as that from sexual intercourse or the avoidance of menstruating women as unclean, practised by these and many other peoples before a hunting expedition or while making their traps.

Where the food supply is precarious or may be easily affected by chance agencies, as it is in both hunting and fishing, it is not surprising to find a primitive people relying upon magic both to increase and to ensure the provision for their needs. The Arunta and other tribes of Central Australia, for instance, perform an elaborate series of magical ccremonies with imitative dances, and make drawings of animals, to increase the food supply. A case has been recorded from the Congo of drawings of fish made on the ground by the river, possibly intended to secure a plentiful supply of fish, while it has been conjectured that the drawings and paint-ings in the caves of France and Spain were the result of an attempt to secure power by magical means over animals used for food.

means over animals used for food.

A more obvious method is followed by the Nutka wizard. If the fish do not arrive in due time, he makes an image of a swimming fish and places it in the water in the direction from which the fish are expected to come, and utters a prayer for the arrival. The Cambodian, when unsuccessful in netting, strips and, simulating the action of an animal, ruus into and rolls himself up in his net, saying, 'Hallo, I am afraid I am caught.' When an Aleut struck n whale with a charmed spear, he did not throw again, but returned home and lived apart in seclusion for three days, snorting in imitation of a dying whale, in order to prevent it from leaving the coast. Seligmann gives significant and instructive necounts of ceremonies preceding hunting expeditions in New Guinea and among the Veddas. The object of the ceremonies is not only to increase the supply of game, but to ensure its capture by anticipatory imitation.

Precautions are frequently taken to secure the

Precautions are frequently taken to secure the efficacy of weapons and hunting methods both by charms and by 'medicine' of various kinds.

charms and by 'medicine' of various kinds.

The sea-otter hunter of Alaska attached great value to the wooden bat which was held to attract the game. The Dénés hang 'medicine' on their nets.\(^8\) Among the Baganda, when game was being driven into nets, charms were hung at regular intervals to prevent it from hreaking through. The elephanthunter, after sharpening his spear, deposited it overnight in the tenple of the god of the chase.\(^9\) The Boloki, before an elephant hunt, used to summon the medicine-man, who spent two or three days making medicine to catch the spirits who divert the game from the traps; every one who was to take part in the bunt chewed red pepper and the fruit of a certain plant. If any one refused or did not spit the mixture out in the proper way, the hunt was abandoned. Several of the Ekol juju are specially connected with huntiag. Before an expedition each member sacrifices to his juju; and, if a leopard fins been killed recently, its skin is rubbed with juju leaves, while a prayer is offered to its spirit that it may go on the left hand to drive the game to the hunter and help him to kill a leopard should one be met.\(^{10}\) In New Guinea a great variety of hunting and

rub stones taken from the stomache the testh of their dogs, and, before of certain odoriferous trees boiled

or certain diorierous trees boiled charm is especially officacious if pic cause these fish jump 'quick and actors. - Chains of quartz crystals, highly polished pebbles, stc., after being heated with a fire-stick, are applied by the Koita to a corner of a fishing net to make it smoke before it is taken to the heach, while in the case of a dugong or turtle net the claw of a raptorial bird is placed under the net for a few minutes, or the funes of gum resin on bot smbers are made to rise through the net.<sup>2</sup>

On the other hand, there are certain actions that must be avoided, as they may affect the supply of game in the future, or may defeat the hunter's efforts in a particular instance. The animal which is slain must be treated with respect, and it may be even necessary to offer it apologies. Those of the Nandi who are prohibited from killing rhinoceros are not so strict as they once were in regarding the prohibition, but, when they kill the animal, they apologize.

Among the Laos, the hunter must not wash for fear the wounds he gives may not be mortal. In Alaska, during the wholing season, the women must remain in comparative idleness, as it is not good for them to sew while the men are in boats. Any repairs to garments which are absolutely necessary must be done out of eight of the shore. The conduct of those who stay at home is believed seriously to affect the success of the hunter. The Bushmen attributed had shooting to the children playing on the men's beds. In East Africa, elephant bunters believe that the bushand of a woman unfaithful during his absence will be killed. In Toaripi, or Motumotu, New Guinea, during a hunting expedition the firs must not be allowed to go out, and the Inmates of the men's club-house must abstain from certain foods and from taking anything that belongs to others. The the inmates of the men's club-house must abstain from certain foods and from taking anything that belongs to others. The Blackfoot Indian would not eat rosebuds when trapping the eagle; for, when it alighted near the trap, the rosebuds in his stomach would make it itch, and it would scratch itself instead of taking the balt. Nor in putting up the trap would he use an awl, as the claws might then scratch him. Any failure to treat the animal slain with proper respect, it was believed, would offend its relatives and lead to a scarcity of game. Among the Thompson Indians, precautions were taken to butcher the deer carefully and cleanly; the blood and offal were buried. If this were not done, the other deer would not present themselves to be killed. Deer meat was never taken through the common doorway of the lodge, because it was open to women who were ceremonially unclean. If the father of a pubescent girl went out to bunt, it was believed that the deer would evade bim. Among many tribes, especially in North America, precautions are taken that the bones of the animals they kill may not be defiled through being eaten by dogs, or in some other way. Sometimes they

by dogs, or in some other way. Sometimes they are burned, sometimes thrown into a river, sometimes preserved in or before the house. Neglect of these precautions would make it impossible to Both in catch other animals of the same species. North Western Canada and in North Eastern Asia the bear is treated with peculiar respect, as is not unnatural in view of its value and strength. deed, in the latter region, the ceremonial which attends the bear sacrifice suggests that it is looked npon as an object of worship, if not as a deity. When hunting the bear, the Dénés begged the animal to come to be shot; it was petitioned not to be angry and not to fight. Sometimes the bear was thanked for allowing itself to be killed. When the flesh of the head had been eaten, the skull was the flesh of the head had been eaten, the skull was placed on a high pole as a mark of respect, and, if this was omitted, it was believed, the other bears would not allow themselves to be killed. This custom of placing the skull on a pole, usually situated at one end of the hunter's house, is found throughout the two regions mentioned above. Among the Ainns, bear hunting was the chief occupation. It supplied the staple of their food

and the material for their clothes, and was the central object in their ritual (see AINUS).

Apart from the question of whether in these and other cases the animal is worshipped and regarded as a god, it is clear that the cereinonial slaughter, in which the custom of shooting the victim with arrows is peculiarly suggestive, falls into line with the seasonal ritual which is, as a rule, intimately connected with food supply. Primitive races do not recognize a close season in hunting, but climatic, social, or religious conditions, or conditions connected with the natural history of the animal, sometimes enforce a period of rest from the pursuit of a particular species. In Central Africa the growth of vegetation, in the Aretic and sub-Arctic regions the rigour of the winter and the migration of species, make a change in methods and objects of pursuit imperative. Among the Nagas, a genna, or tabu, forbids all hunting during the agricultural season. Where such causes as these are operative, the primitive mode of thought requires the hunting season to be inangurated by a special ceremony to obviate the risk which at-taches to a spiritually dangerous operation, as well as secure by a due observance of ritual that the future supply of food will not be endangered by an oversight or mistake.

E. N. FALLAIZE HUNTINGDON'S (COUNTESS OF) CONNEXION.—The Countess of Huntingdon's Connexion is a loose confederation of about 45 urban congregations, akin by origin to the Calvinistic Methodists, making some use of the Anglican liturgy and the Thirty-Nine Articles, worshipping in buildings held by trustees with nominally absolute powers, assisted now by a conference of representa-tives. The founder, the Countess of Huntingdon, Selina Shirley (1707-91), daughter of the second Earl Ferrers, was attracted in 1739 into the first Methodist Society by George Whitefield. John Newton declared that at this time he was not sers that there was in the whole kingdom a single parish that there was in the whole kingdom a single parker minister publicly known as a gospel preacher. She, therefore, approved Whitefield's plan of key preaching, and her seat of Donnington Park because a centre of itinerancy over the Midlands. The death of her husband (1746) left her in the prime of life free and rich. On the return of Whitefield from Georgia she relieved him of his money discontinuous and appointed him her chaplein. culties and appointed him her chaplain. In the capacity he conducted frequent meeting drawing room, and intraction to society circles, while invited her to lead the movement. She now feet to see the movement of the now feet to see the now feet to see the new feet to see th two revival problems—how to secure evaluation preachers, and how to ensure that given continuity of evangelies? might have continuity of evangelical property The universities could by no means be relied for the former; the system of patrons dangered the latter; while the system of patrons and dangered to latter; ships, previously devised to ensure it, its declared illegal.

The latter problem was the coner, and the solved it not by buying up livings, but the ing her rights as a pecress. The Calving her rights as a pecress. gelicals in the Church of England rallies and and she appointed many clergy to be here and and she appointed many clergy to be here as pluralities were common, several tinned to hold livings while often travescrice. On the theory that she private chapel exempt from epicopei attached to each of her residence, property in fashionable resorts like Brighton, Bath, and Tunbridge Verlagels. These were frequented declined to countenance the Meting. but who found no help in the declined to cound no help in the

and chapels of easo; many were of the leisured classes. So successful was the experiment that other towns were similarly treated, from York to Lewes, from Norwich to Swansen; and the Countess moved her chaplains about as she deemed best. Her influence was at its height in 1768, when, after a vain remonstrance with Archbishop Cornwallis on the bad example of his wife, she brought on him a savera rebuke from the king. This naturally did not increase the friendliness of the bishops, and in her desire for evangelical clergy she adopted a still more independent attitude, resembling that

of the Old Dissent.

Howell Harris, the Calvinistic Methodist, had acquired large premises at Trevecca, whither a number of Welsh evangelists had migrated. this place she fixed for a Seminary, and on her 61st birthday (24th Aug. 1768) Whitefield opened it, for training at her expense young preachers who should be free to work within or without the Established Church. She appointed as President John Fletcher, who often came across from Madeley to take his duties seriously. A resident master was sought, whose prime qualifications were to be faith and power from above, devotedness to God's canse, and Christian experience. Greek, Latin, Divinity, and the Sciences were to be taught. From 1768 onwards the Seminary not only sent forth earnest recruits for work in Britain, Ireland, and America, but was the Keswick of its day, whither huge

crowds resorted every Angust.
In 1770 the Wesleyan Conference passed resolutions which led to a falling asunder of the Arminian and Calvinistic wings of the revival army. The Countess decided to establish a great London centre for the Calvinists, and bought fine premises in Spa Fields, which had been first a pleasure resort, and then a proprietary chapel. Retaining, as usual, a small part as her technical residence, she evidently destined the main building to be her cathedral. A neighbouring clergyman, therefore, successfully tested the legality of her proceedings by actions in the consistory court of the Bishop of London (1779). This crisis considerably altered London (1779). This crisis considerably altered the character of the movement. Some of her sixty chaplains severed all official relations with her; others broke with the Establishment, and took licences under the Toleration Act. She guarded these by registering her buildings for Dissenting worship. This, however, was hardly more than a technicality, for the liturgy was used almost un-changed, and the Thirty-Nine Articles were taken as the basis of a new Confession. The gaps caused by the defection of some chaplains were partly filled by students from Trevecca. As the bishops grew more reluctant to ordain these, the final breach occurred in 1783, when two of her clergy openly ordained six students in Spa Fields. This emboldened Wesley to follow suit next year.

The Countess proposed to consolidate the movement by forming an Association of ministers and laymen, somewhat on the lines of the Old Dissent, but was persuaded to bequeath all her chapels absolutely to four trustees. The Seminary was at solutely to four trustees. The Seminary was at once transferred to Cheshunt, and became the centre of gravity. The foreign missionary movecentre of gravity. The foreign missionary move-ment inaugurated by Carey was taken up enthusi-astically, the London Missionary Society being formed at Spa Fields (1795), and the college sup-

plying numerous volunteers.

The itinerant system inherited from the Countess has given place to comparative fixity of tenure, and the Congregationalists have shown themselves ready to disregard all differences and to welcome into fellowship; but the disintegration was checked in 1899 by Chancery. The college is now at Cambridge, while the trusts encourage continuous service within the Connexion.

HUPA.—The Hupa Indians in N.W. Californ linguistically classified with the Pacific Coast di sion of the Athapascan stock, represent in matte of religious belief and practice a culture area whi includes W. Oregon and N.W. California. As a gards particular ceremonies even, Indians of oth linguistic stocks, the Karok and Yurok on t lower Klamath river, join with the Hupa in the celcbrations, and seem to feel that these ceremoni are common possessions.

1. Rites and ceremonies.—Three ceremonies importance used to be held annually for the bene

of the entire community.

(1) One of these, called Haitcitdilye, 'Wint Dance,' is held late in spring, at the close of the control of the con rainy season. Its purpose is to drive away as prevent epidemics, and to preserve the good heal of the people. The first half consists of ten nigh devoted to singing and dancing round a fire in the sacred house. This house differs from the other primitive dwellings only in the traditions contributed to the same of the s nected with it, and in the restriction that person of illegitimate birth are excluded from it. The dancing is done by several individuals, who circ about the fire, with their hands on the shoulder of the persons in front of them. A dance, which is a test of endurance, about a very hot fire, takes place at the conclusion of the last five nights of this part of the ceremony. No clothing is worn and, because of the limited size of the room, the dancers are exposed to the fierce flames. The capacity and daying the density as a leaked when a songs sung during the dancing are looked upon a the chief means of frightening away disease. The concluding portion of the ceremony occupies ter days, and is similar to the autumn dance described

below, except that it is held in another place.

(2) The second ceremony takes place in August or Scptember, and is usually called *Honsitltcitdiye*. 'Summer Dance.' It is held out of doors, at certain places near the river, and lasts ten days. The cost tumes and sacred objects used in the dance are transported in canocs. The faces of the dancers are painted in horizontal lines with black obtained from the charcoal of the fire. A robe of deer-skir is worn either about the waist or from the left shoulder. A band of fur is bound round the head and a net falls over the hair and neck. Eagle feathers or feathered darts are inserted at the back of the head. Two men, who are to carry the sacred obsidians, have closely knitted head-dresses, which hang nearly to the waist, and a row of sea-lion teeth about the forehead, instead of the band of fur. When the twelve or fourteen dancers are in line, it is noticeable that they are arranged symmetrically, from the middle, where the chief singer stands, to the wings, where boys are usually found. Not only are they graded as to stature, but the decoration and arrangement of the costumes of those equally distant from the centre are similar. Each dancer in the line holds a pole, on which a dressed and decorated deer-skin is draped. These skins all show peculiar natural markings, the most valued ones being those of albino deer, which have been killed in past generations and the skins faithfully preserved as the property of the community. The singing is led by one who has received the songs in a supernatural experience, and is accompanied by the men in the line, both by the voice and by moving the body and the horizontally held deer-skins backwards and forwards, and stamping with the left foot. Men from different localities compete in this singing and dancing, in alternate series of movements. During the first of each

HUPA 881

series two men, each carrying a large, beautifully flaked black or red obsidian, move towards each other in front of the line of dancers, who elevate their poles with the deer-skins to let them pass. Afterwards these men take their places in the line,

Afterwards these men take their places in the line, and join in the dancing.

There are two interesting variations in the celebration. One of these takes place on the river, which, because of its swiftness, is difficult of navigation for the 'dug-out' canoes. Two or more of these canoes are filled with standing dancers, who by concerted movements impart considerable motion to the canoes, which are made to move down stream abreast. They approach and recede from the shore ten times before the final landing is made. The song sung is an old traditional one, instead of a new and specially revealed one. On the last afternoon of the ceremony many dancers form a long line on a hill somewhat back from the river and stand facing the south-west, from which direction the immortal first inhabitants of the world are supposed, ceasing their own dancing, to watch that of mortals.

One or two priests prepare the ground at each of

One or two priests prepare the ground at each of the places where dancing occurs, by removing vegetation and objects which would annoy the dancers, and by scattering a sacred powdered root where they are to stand. They then build a small fire a short distance in front of the line, into which they throw the sacred root and tobacco, as they pray for the welfare of the people. During the intervals of the dancing, the priests, or other old men, address the spectators on ethical and religious subjects.

consciousness of the Hupa seems to give this ceremony a particular purpose. In a general way it is approsed to bring health and prosperity. The Nothing in the myths or folklore or in the present is supposed to bring health and prosperity. positions and movements of the dancers in relation to the deer-skins are strongly suggestive of sym-pathetic magic, to promote the annual mating of

(3) In two or three weeks after the completion of this ceremony a third one is begun. It is called *Tunktcitdilye*, 'Autumn Dance,' and is held at the village of Takinmidding. A high fence is erected, in front of which the dancers are to stand. They wear on their foreheads broad bands of buckskin, covered with the scarlet crests of woodpeckers, relieved with white fur above and below. Many strings of shells are worn about the neck. An object of twined fibre is held in the hand while dancing. This resembles in shape the box of elkhorn used in this region to contain the dentalium currency. The men stand in line, with a man of exceptional physique in the middle, and a singer on each side of him. The basketry objects held in the right hand are swung forwards and upwards, and then brought down with a stamping of the left foot. One of the singers leads with a song, and the dancers accompany him, with vocables loudly uttered. When each of the singers has sung, the deer-skin robes are dropped from the waist to the ground, the baskets are placed on them, the dancers join hands and jump, raising both feet from the ground. Occasional rests are taken, the dancers squatting on their heels. As in the ceremony described above, groups of men from the two geo-graphical divisions of the tribe compete in the alternate performances. The celebration lasts ten days, the last afternoon being the most important and the most largely attended. Its object is said to be to maintain the health of the people. A myth indicates that the first of the people. myth indicates that the first intention of the originator of the ceremony was that it should renew the youth of the aged who were to partici-pate in its benefits. Being unjustly attacked, he took the dance, regalia, participants, and all to another world. The present human celebration of it is a less potent copy.

None of these dances or general ceremonies can be held nntil a valuable present has been made to the next relative of all persons who have died since

the last similar settlement. VOL. VI.-56

In the antumn, when the acorns have fallen in considerable quantities, a feast is held. Fresh acorns are ground, leached with tepid water, and made into mush by women designated for the office. When the people have gathered about noon, the priest leaves the sacred house and goes to the feast-ground. No one is allowed to look at him as he passes, for he impersonates the god of vegetation. He builds a fire ceremonially, and places stones in it, which are to be used by the women to cook the mush by dropping them hot into the baskets in which it is contained. First the priest and then the other men go to the river for a bath. The women wash their hands and faces only. The mush is served to the people in baskets, as they sit on stones, which remain from year to year in a circle about the fireplace. Fish, cured and fresh, are served in addition to the acorn mush. When the people have eaten, the priest places in the fire all the food that remains, and prays that the new crop may not be stolen by the birds and rodents, and that even in small quantities it may nonrish and sustain the people. stones used in cooking are deposited with those of previous years, and are never used again, or tonched, except by the priest who keeps them in an orderly pile.

There are priests in whose families it is the traditional duty to catch the first lamprey eels and first salmon of the season, and perform a ceremony that shall ensure an annual run of these in large numbers and of excellent quality. A long formula is repeated by the priest, the object of which is to prevent certain evil supernatural beings at the mouths of the rivers from stopping the migrations, and to guard against the offending of the fish by the breaking of tabus. The eels and salmon caught are eaten by people who gather for the purpose, but the number so caught is usually insufficient

for a considerable feast.

There are several ceremonies of a public character, the benefits of which are for particular individuals. The breaking of one of the many tabus connected with deer results in the enslavement of the offender's soul by the beings who are believed to own and care for the deer. When this has happened, the unfortunate man loses his health, and, upon ascertaining the cause, calls in a priest learned in this particular. A night is spent in song and prayer, in which several laymen partici-pate, the object being the recovery of the soul. Because of certain offences on the part of the parents, or as the result of several deaths in the family, the souls of children, while they are still living, are supposed to have gone to the world of the dead. They are recalled by prayer, songs, and dancing, which continue during the first half of the first night, and during the whole of the third night. The ceremony is in charge of a priest or priestess, who spends the preceding days with a young girl in the forest, securing the necessary herbs and pitchwood used in the ccremony. A ten days' ceremony is held for the benefit of

each girl at the first appearance of menstruation. During this time she is under the guardianship of an old female relative, who makes sure that she keeps the tabus in regard to food and water, which are allowed her but once a day in combination as acorn gruel, and prevents her contact with people. The girl bathes in a ceremonial way at prescribed places each morning, and afterwards brings wood for the house-fire. Especial care must be exercised in regard to the language and conduct of the girl during this time. Not only will whatever she says happen, but whatever she does will become a fixed habit during her future life. The nights are spent in song. Several times during the night the men come into the house, where the girl is com882

pletcly covered with a blanket, and sing over her, shaking rattling wands as an accompaniment. After the men withdraw, the women, who remain, sing songs of their own. This ceremony and the keeping of the tabus are supposed to procure long

life and a desirable disposition for the girl.

A shaman, or medicine-man, first undergoes training during several months under the care of an older shaman. He is required to restrict his supply of water and food, and engage much in bathing and in smoking of tobacco. The nights, especially towards the close of his training, are spent in dancing about a fire in a large sudatory. Men and women join in the songs, and keep time with their feet as they sit about the sides of the The candidate must show his ability to control certain imagined semi-material objects, called 'pains,' injecting them and removing them

from himself and others at will.

Besides these shamans with supernatural power, the singers at the greater ceremonies with super-natural gifts, and the priests charged by inherit-ance with the celebration of the dances and feasts, nearly every adult knows several formulæ for some particular object, such as hunting, fishing, gambling, love-making, and the cure of ailments. These formulæ are generally repeated over some fragrant herb, which is applied to the body, internally or externally, or to the weapons and implements con-cerned. The formulæ recite the discovery of the remedy or power by a supernatural person, its first application, and the wonderful results which followed. A prayer is addressed to this being, and an offering of tobacco made by blowing it in a powdered form from the hand. One may seenre from another the benefit of one of these formulæ by the payment of a reasonable fee. Care is taken, in reciting them in the presence of others, to chant them in such a manner that they are not understood. Many formulæ have songs used in connexion with them, particularly those relating to hunting fighting combling and long relating to hunting, fighting, gambling, and love-making. Hunting parties usually spend the night preceding

a hunt in continued song and prayer.

The elderly nien and the religiously inclined younger ones follow the daily habit of bringing sweat-house wood during the afternoon, taking a plunge into the river after the sweat bath, and spending some time in prayer, sitting naked after the bath. When a particular boon is desired, the men go to some high, wooded point, trim the branches from near the top of a large Douglas spruce, and stand naked in the acrid smoke of the green brush throughout the night. Bathing in certain pools, believed to be dangerous because they are the haunts of water-monsters, is produc-tive of good luck. Whenever occasion suggests, extempore prayers are resorted to, accompanied by

burning the sacred root.

2. Religious beliefs.—The Hupa believe that they sprang spontaneously into being from the ground, in the same locality in which they have lived since they have been known by white men. They claim to have been preceded by a race of similar origin—immortals, who, by their correct behaviour fived for the mortals destined to follow. behaviour, fixed for the mortals destined to follow them the traditional conduct for all situations in life. Their chief, Yimantuwingyai, gave shape to the world according to his whims, provided some of the ceremonies, and rid the world of the monsters that preyed upon men. His wives, to whom he had been unfaithful, brought death into the world, and frightened the immortals from it. The latter fled to worlds beyond the Pacific Ocean and above the sky, where they still practise the perfect ways and celebrate the dances. Yimantuwingyai presides over one community of them, and his son over another. They observe the condition of the

earth and its inhabitants during the celebrations of the dances by immortals. Yimantuwingyai's conduct was often not above reproach; and the evils in the world, including death, are the results of his uncontrolled passion. He is seldom addressed in prayer.

A god of vegetation, Yinukatsisdai, 'he lives south,' was the originator of vegetable food, and still controls its supply by making annual provision according to the care or abuse of the previous crops by the people. He is generally invisible, is small of stature, and always carries a sack of seed.

The deer on the several ridges or mountains are under the care of local gods, called Tans. keep the deer in the interior of their special hills, and let out only those destined as the reward of the hunter who keeps the tabus and sings the required They have the owls for servants. Hupa soldom mention them, but fear them greatly and direct many of their prayers to them.

The two thunders, at the north and the south, control the weather, sending that which is un-seasonable when they are offended by the presence in sacred localities of those who have been bereaved, and are therefore in a measure unclean. They are appeased by a ceremony conducted near a rock in which the thunders are interested. The particular sort of weather desired is indicated by sprinkling the rock with water, or by carrying coals of fire round it.

There are numerous spirits believed to occupy the interior of mountains, deep pools in the streams and certain places by the trails. These are not unkind to mortals, with whom they have become acquainted through worship, but are hostile to strangers and the uninitiated young members of

the tribc.

The lower world, the abode of the dead, is under the control of a person seldom named. All except shamans and singers at the dances go to this com-mon home regardless of their conduct in life. They appear there in the exact condition in which they have been buried. For this reason the Hupa hold that burials should be conducted with great care. The personal property of the dead is either buried with him or destroyed, apparently to prevent his return for it. Great care is exercised to avoid the reappearance of the ghost, especially in dreams. A five days' ceremony is necessary to free the grave-digger and the family of the deceased from uncleanness.

The heavenly bodies are considered to be per-The sun is feared as one who consents to all natural deaths, but seems not to be worshipped. The morning star aids the warrior who knows and sings his songs. The white first dawn is worshipped as a maiden, who wishes to behold the faces of her worshippers as many days as possible, and therefore prolongs their lives. Early rising is practised in her honour. Prayers in general are said to be addressed to *Ninisan*, which usually means the earth, but seems capable of a wider meaning, including the universe as known to the Hupa. The conception, which seems to be vague, is decidedly animistic, but seldom personal. The deities mentioned above are perhaps only localizations, specializations of the one pervading soul of the world.

3. Ethics.—Social behaviour is very fully prescribed by tradition. The disregard of the rules of conduct is followed by material and temporal misfortune, but is not directly displeasing to the supernatural personalities and is not punished after death. The divinc ones are offended rather by uncleanness, resulting from anything sexual or connected with death. Generosity is followed by blessing of the food supply. Unsanctioned sexual alliances are avoided, as likely to result in off. HURON 883

spring lacking by nature in moral character, and so little esteemed in the cyes of bis fellows that his death cannot be avenged. Injuring other persons by word or deed is avoided from fear of retaliation. The avenging of wrongs or insults to oneself or one's relatives is a sacred duty which may be dis-charged with honour at night from the brush as well as in open fight. In accordance with the same principles and by the same methods, the group, whether the single village against a neighbouring one, or the allied villages against those of another river-valley and of another speech, defend their land and rights, and avenge injury and insults. The final settlement of difficulties, internal and

The final settlement of difficulties, inschange external, is by the payment of money.

P. E. GODDARD.

HURON.—The Huron were a confederation whose principal members were four Iroquoian tribes-Attignawantan ('Bear People'), Arendahronon ('Rock People'), Attigneenongnahae ('Cord People'), and Tohontaenrat ('White-eared or Deer People')—that, from about 1589 to 1650, occupied a district known as Huronia, lying in the pen-insula formed by Nottawasaga and Matchedash Bays, the River Severn, and Lake Simcoe, in what is now known as Simcoe Co., Ontario (see the maps of the region in the Huron period, in Parkman, Jesuits in N. Amer., by A. F. Hunter, in Jesuit Relations, x. [ed. Thwaites], and by A. E. Jones, ib. xxxiv.). The earliest members of the confederation were the Attignawantan and Attigneenongnahac, who eeremonially termed each other 'brother' and 'sister,' and who had received the Arendahronon and Toliontaenrat about fifty and thirty years respectively previous to 1639 (Lalemant, in Le Jeune, Jes. Rel. xvi. 227, 229). Among the minor members of the confederacy were the Iroquoian Wenrohronon and the Algonquian Toton-taratonhronon, who joined the Huron in 1639 and 1644 respectively.

The term by which this confederacy is known is not Indian, but French, huron being a pejorative of O. Fr. hure, 'rough, bristling hair,' and having been applied to the peasants of the Jacquerie in 1358. According to Lalemant (op. cit. 220-231), the term was applied to these Indians by a Frenchman about 1600, because of their style of head-dress. Their native name was Wendat (probably meaning 'islanders' or 'peninsula-dwellers'), which appears in a number of variants, and which has been corrupted into their modern designation Wyandot.

The Huron were, as Lalemant said (in Le Jeune, Jes. Rel. xvii. 195), 'only an assemblage of various families and petty nations, which are associated

families and petty nations, which are associated together for the purpose of maintaining themselves against their common enemies; and hence their religious system was composite, a case in point being the borrowing of the Algonquian rite of the common to the Algonquian rite of the common to the common to the system. marriage to the fishing-net (see below, p. 884b).

The governmental system of the Huron has been studied exhaustively by J. W. Powell (1 RBEW [1881], 59-69), who shows that it was based on a gentile organization 'of consanguineal kindred in the female line,' and that each gens bore the name of some animal, the ancient of this animal being the tutelary deity of the gens concerned. The gentes in the Wyandot period have been Big Turtle, Little Turtle, Mud Turtle, Wolf, Bear, Beaver, Deer, Porcupine, Striped Turtle, Highland Turtle, Snake, Hawk. Of these, the Mud Turtle, Deer, Striped Turtle, Highland Turtle, Snake, Hawk. Turtle, Beaver, Striped Turtle, Highland Turtle, and Hawk are now extinct. The Wolf exercise the functions of umpire, mediator, and executive between the two divisions—the first including the Bear, Deer, Hawk, and Snake, and the second comprising all the rest (W. E. Connelley, Archaol. Report Ontario, 1899, pp. 100 f., 105 f.; according to him, the Wyandot represent chiefly the Tionon-

tati, or Tobacco Nation fon which see Mooney, HAI ii. 755 f.; for a different enumeration of Wyandot gentes, see Powell, loc. cit.]). Each gens possessed a tract of land, which it could change only with the permission of the tribe; and at intervals of two years the women councillors re-partitioned the land. The property, consisting of the wigwam and household articles, was inherited by the eldest daughter or by the nearest female kin; and the personal belongings of the husband, such as clothing, hunting and fishing implements, and a small canoe—large canoes were gentile property—by his brother or by his sister's son. Each phratry had the right to certain roligious ecremonies and to the preparation of certain medicines; each gens to the worship of its tutelary deity; and each individual to the possession and use of his particular amulet or charm,

The general picture of the Huron, as given by the early Recollets and Jesuits, is attractive. are introduced to a people, grave, patient, court-eous, and hospitable, modest in demeanour, brave, and, on the whole, industrious. Their faults were those of primitive peoples generally. They were cruel to the enemy, they would beg or steal from the alien, pre-nuptial chastity was lightly esteemed, and their religious rites contained much that was abhorrent to the zealously religious. Their criminal code has been summarized by Powell (1 RBEW [1881], 66-68). A girl guilty of fornication was punished by her mother or femalo guardian; but, if the case was flagrant or neglected, it might be taken up by the council women of the gens. An adulteress had her hair cropped for the first offence, and her left ear cut off for the second. Theft was punished by twofold restitution, and treason was a capital erime. Murder and maining were compounded (cf. the elaborate accounts given by Ragueneau, in Lalcmant, Jes. Rel. xxxiii. 235-249, and by Brébeuf, in Le Jeune, ib. x. 215-223). A secret sorcerer might be killed by any one (Brébeuf, 223; Ragueneau, 219, and in Lalemant, Les. Rel. xxx. 215-215. Jes. Rel. xxx. 21). If, however, a soreerer was placed on trial and found guilty, he might appeal to ordeal by fire. Outlawry was of two degrees: if the outlaw continued to commit crimes, he might be killed without fear of clan vengeance; or it might be the duty of whomsoever met with him to kill him (Powell, 67 f.). Suicide was not infrequent; and mere children, if harshly treated by their parents, were apt to hang or poison themselves (Le Mereier, Jes. Rel. xiv. 37; Chaumonot, ib. xviii. 27-29; Le Jeune, ib. xviii. 165-167, xix. 171-173).

A trait of the Huron and other Iroquois, as well as of the Algonquin and other eastern tribes, which has always shocked the general reader was their savage cruelty toward prisoners taken in war. No tortures were too terrible to be applied; and the bare recital of them as recorded in the Jesuit Relations and similar documents is, it must be confessed, somewhat unpleasant reading. It would appear that to some degree there was a delight in torture for its own sake—a sentiment which appears often in children of the higher races, and of which traces are found among even the most cultured adults. In many instances, further, the idea of personal revenge for the loss of a relative must have played a part. Yet there was also another side, in which, apparently, must be sought the real explanation of this trait. In a case recorded by Charlevoix, Hist. of New France, tr. J. G. Shea, New York, 1866-72, ii. 105-110 (repeated by Le Jeune, Jes. Rel. xiii. 37-79), a Seneca captive was senducted to a Hurar willow to take the place of conducted to a Huron village to take the place of the captured nephew of a chief, if the latter so de-sired. The prisoner was given a bride, was clothed in a new beaver robe, and, feasted in every cabin,

884 HURON

was treated with all kindness. The chief received him with affection, and the captive Huron's sister gave him food as if he were her own brother. With regret, however, the old chief informed the prisoner that his wounds were so severe that he must die, and the captive was accordingly tortured to death. Generally speaking - although exceptions frequently occurred—a captive was treated as well as possible until he reached the village where his fate was to be decided. There he might be adopted in the stead of a kinsman captured or slain; and such adoption was, in reality, based on a belief that the person so adopted was actually the person whom he represented. If tortured, he was expected to show defiance to his tormentors, and to bear every pain with the utmost stoicism. In the midst of his tortures, caressing words were addressed to him, and he would be honoured with delicate touches of firebrands or red-hot hatchets. To the horrified observers of all this, such caresses seemed. with good reason, the irony of demons incarnate; but it may be suggested that these were both intended and received as genuine. The substitute for a hero must die like a hero; if he was a poltroon, he dishonoured both himself and the dead. In him were curiously blended, to the Indian mind, both the enemy and the friend. He must suffer all night until the dawn (Lalemant, in Le Jeune, Jes. Rel. xvii. 75; cf. lxi. 65), doubtless in honour of the war-god, who seems to have been another form of the sun-god. After his death, if he had borne himself bravely, portions of his body were eaten (see art. CANNIBALISM, ii. § 6); and in some cases a Huron would make an incision in his own neck, and permit the blood of his tortured enemy to flow into it; for,

'slince they have mingled his blood with their own, they can never be surprised by the enemy, and have always knowledge of their approach, however secret it may he' (Bréheuf, in Le Jeune, Jes. Rel. x. 227-229). It should be noted that, whereas in feasts on bear, dog, deer, or fish, the head was the most important part, in cannihalistic feasts the head was given to the lowest individual present (ib. 229).

The trophy usually carried off from a slain enemy during war was the head, and the cabin of the warchief was called 'the house of cut-off heads' (Le Mercier, in Le Jeune, Jes. Rel. xiii. 59). If, however, their burden of heads proved too heavy,

'they were content with taking the scalp with its hair, which they call onontsira . . . to make trophles of them, and to put them, in time of war, on the palisades or walle of their town, fastened to the end of a long pole' (Sagard, Voyage, 203, Hist.

448 f.; cf. 455).

The Huron possessed a form of fellowship, by which 'two young men agree to he perpetual friends to each other, or more than hrothers. Each reveale to the other the secrets of hie life, and counsels with him on matters of importance, and defends him from wrong and violence, and at his death is chief

mourner' (Powell, 68). The sexual morality of the Huron appears to have been rather low. Pre-nuptial chastity was rare, and the young men frequently kept mis-tresses. Even after marriage, husband and wife are described as permitted to seek other temporary partners, without manifestation of jealousy by their lawful spouses (Sagard, Voyage, 160, 165, Hist. 315 f., 420); and Sagard even declares that the favours of girls were sold for a small price by themselves and by their fathers—and of wives by their husbands-and that panders were not unknown (Voyage, 177). In a proposal of marriage, the man asked the girl of her parents. If she then accepted his presents, he was privileged to pass two or three nights by her side before consummat-ing the marriage; but, if she had little liking for him at the end of that time, the matter was closed. If she felt affection for her lover, the formal marriage took place by the simple announcement of their wedlock in the presence of relatives and friends, and a wedding feast followed (Voyage, 161-163, Hist. 316f.). Marriage within the gens

was forbidden, though it must be contracted within the tribe; so that, if a person outside the tribe was chosen as a mate, he or she must first be adopted into some other gens than that of the prospective bride or groom. Polygamy was permitted; but the brides—unless sisters, who must be married within each other's lifetime, or else the second would be reckoned the husband's niece, so that she could not be married by her brother-in-law without reproach (Le Jeune, Jes. Rel. xvi. 207)—must be from different gentes. The husband retained the rights of his gens, but lived with the gens of his wife. Polyandry was unknown (Powell, The descendants of brothers and sisters were regarded as 'brothers' and 'sisters,' and could never intermarry 'if they follow the good customs of their nation'; nor was a widower or widow expected to re-marry within three years (Le Jeune, 203-205). The principle of matriarchy is also obvious in case

of death, for,
'in the event of the death of the mother, the children helong to
her sister or to her nearest female kin, the matter heing settled
by the council women of the gens. As the children helong to
the mother, on the death of the father the mother and children
are cared for hy her nearest male relative until subsequent marriage' (Powell, 64).

Divorce was extremely facile (Lalemant, in Vimont, Jes. Rel. xxviii. 51-53; Sagard, Hist. 298 f.); but, if there were children, only a gravé cause could dissolve the marriage. In this case the children went with the father; but children were not the heirs of their father, whose property went to the children of their sisters (Sagard, Voyage,

164-166, 173)

The cult of the Huron, as has already been noted, was largely composite in character. Thus it is stated by Lalemant (in Le Jeune, Jes. Rel. xvii. 197-199) that the Huron rite of marrying two girls of tender age to the fishing-net had been borrowed from the Algonquins, because, 'some years ago,' the oki of the net had declared himself angry at the loss of his wife, and hence had prevented the Huron from catching fish until he had a spouse; whereupon, to make him the more contented, they gave him two (cf. Brebeuf, in Le Jeune, Jes. Rel. x. 167, where it is added that fish fear the dead).

As among so many other peoples, beliefs were relatively fluid among the Huron, whereas customs and rites were firmly established. This is brought

and rives were firmly established. This is brought out by Le Jeune (Jes. Rel. xvi. 199):

'The hellef and superstitions of the eavages are not very deeply rooted in their minds; for, as all these idle fancies are only founded upon lics, they fall of themselves, and euddenly disappear, or are dissipated by the raye of the truths, entirely conformable to reason, that are proposed to them. . . . As for what relates to their customs, that ie a longer etory. It is easier to banish errors of the understanding than to remove the bad habits of the will.'

The traditional history of the Huron was kept alive by being recited at assemblies for the election of chiefs (Ragueneau, in Lalemant, Jes. Rel. xxix. 61), and they believed that they came originally for the state of the ally from a mountain side between Quebec and the sea, or at all events from the northern shores of the lower St. Lawrence (Wilson, Trans. Roy. Soc. Can. ii. pt. i. p. 59).

Their cosmogony is elaborately described by Brébeuf (in Lé Jeune, Jes. Rel. x. 127-139).

The Hurons are declared to have recognized a first principle of all things, and to have wor-shipped the sky and the sun. On this Ragueneau in Lalemant, Jes. Rel. xxxiii. 325) says:

'There remained in their hearts a secret idea of the Divinity and of a first Principle, the author of all things, whom they invoked without knowing him. In the forests and during the chase, on the waters, and when in danger of shipwreck, they name him Aireskouy Soutanditenr, and call him to their aid. In war, and in the midst of their hattles, they give him the name of Ondoutaets, and believe that he alone awards the

<sup>1</sup> Thie deity, who is probably identical with the sun (ct. preceding col.), had the form of a dwarf. If he appeared to a warrior and caressed him, he would be victorious; but, if he

HURON 885

victory. Very frequently, they address themselves to the sky, paying it homage; and they call upon the sun to he witness of their courage, of their misery, or of their innocence. But, ahove all, in the treaties of peace and alliance with foreign nations they invoke, as witnesses of their sincerity, the sun and the sky, which see into the depths of their hearts, and will wreak vengeance on the treachery of those who betray their trust and do not keep their word.'

We are also informed by the same antherity (it.

We are also informed by the same authority (ib. 217) that a principle of evil was acknowledged.

'The Hurons helieve that there is a kind of monstrous serpent which they call Angont, which hrings with it disease, death, and almost every misfortune in the world. They say that that monster lives in subterranean places, in caverns, under a rock, in the woods, or in the mountains, but generally in the lakes and rivers. They say that the screeres uss the flesh of that frightful serpent to cause the deaths of those upon whom they cast their spells.'

If a man died by drowning or freezing, the sky was angry, and must be propitiated by cutting up the corpse and throwing the entrails and choicest portions into a fire as an offering to the offended deity (Brébeuf, in Le Jeune, Jes. Rel. x. 163). The wide-spread belief in the thunder-bird (cf. ERE i. 529) was found among the Huron (Sagard, Voyage, 251, Hist. 500; Brebeuf, 45); during eclipses they shot arrows at the sky to deliver the moon from danger, and uttered imprecations on their enemies (Brebeuf, 59); and they held that at night the sun went through a hole in the earth, emerging from the other end of his hiding-place at dawn (Sagard, Voyage, 251, Hist. 494, 537). maintained that not only men and animals, but also inanimate things, had souls, to which prayer must be offered (Sagard, Voyage, 258, Hist. 493, 642), and that spirits ruled over rivers, journeys, treaties, wars, feasts, and maladies; even a rock of human shape, on the road to Quebec, was believed to have been originally a man, and sacrifice was offered to it, just as tohacco was cast into the dangerous Sault de la Chaudière after the Huron had safely passed it (Sagard, Voyage, 231 f., Hist. 495 f., 822; Brcheuf, 165-167). To seeure good fishing, tobacco was often burned in honour of the water-spirit; but, if any portion of fish or game fell into the fire, no more would be caught, especially as the nets would tell the fish if such a thing occurred, or even if a child was harshly reproved; but, on the other hand, a good eatch might be seenred by the services of a fishing preacher (prédicateur de poisson) in each cabin, who told the fish of the Indians' dévotion to them, and nrged them to help the Huron, who honoured them and did not burn their bones (Sagard, Voyage, 255-258, *Hist.* 639-642, 494). Human sacrifice was unknown among the Huron (Sagard, *Hist.* 499). Prayer was constantly employed, a specimen heing thus recorded by Lalemant (in Vimont, Jes. Rel. xxiii. 55):

Each one should go every day to his field, throw some tohacco on the fire, and hurn it in honour of the demon whom he worshipped, calling aloud this form of prayer: "Listen, O sky! Tasts my tohacco; have pity on us!"

The general attitude of the Huron towards the unusual and their faith in charms are summarized by Bressani (Jes. Rel. xxxix. 25-27; cf.

marized by Bressani (Jes. Rel. xxxix. 25-27; cf. Ragueneau, in Lalemant, Jes. Rel. xxxiii. 211-213):

'They had a superstitions regard for everything which savored a little of the uncommon. If, for instance, in their hunt they had difficulty in killing a hear or a stag, and on opening it they found in its head or in the entrails a bone, or a stone, or a serpent, etc., they said that such object was an eki, that is, an enchantment which gave strength and vigor to the animal, so that it could not be killed; . . . if they found in a tree, or heneath the soil, some stone of an uncommon shape, like a plate, or spoou, or any vessel, they esteemed this encounter fortunate; because certain demons (they sald), which live in the woods, forget these things, which make any person who finds them ngain successful in fishing, hunting, trade, and gaming. These objects they called acskuandi, and believed that they often changed form, transforming themselves, for instance, into a serpent, or n raven's beak, or an eagle's claw, etc.—changes which none had seen, hut which all believed.'

The system of fraternities was developed among

The system of fraternities was developed among smote him on the forehead, he would be killed (Bréheuf, in Le

Jeune, Jes. Rel. x. 183).

The members of one of these, in endeavouring to expel the disease demon Aoutaerohi, carried lot stones and firebrands in their mouths, rubbed the siek with the glowing embers, and growled like hears in their ears (Lo Mereier, in Le Jenno, Jes. Rel. xiv. 59-65). In general, Lalomant (ib. xvii. 197) says:

For several of these superstitions there are organized fra-'For several of these superstitions there are organized fra-ternities, to which, and especially to the masters of which, one must address himself. All those who have once heen the object and occasion of the dance or the feast helong to the fraternity, to which, after their death, ons of their children succeeds; soms have, hesides, a secret or a charm which has heen de-clared to them in a dream, with the song to he used before going, for example, to the fire feast, after which they can handle the fire without hurting themselves' (of also Raguenean, in Lalemant. Les. Rel. xxx. 23). in Lalemant, Jes. Rel. xxx. 23).

The 'medicine-man' flourished among the Huron, and some of them were not sineero, although the baser memhers of the profession were doubtless those unofficial soreerers who, as noted abovo (p. 883b), might be killed as outlaws. On this subject Bréhenf (in Le Jenne, Jes. Rel. viii. 123) writes:

Writes:

'They say that the sorcerers rnln them; for if any one has succeeded in an enterprise, if his trading or hunting is successful, immediately these wicked men bewitch him, or some momber of his family, so that they have to spend it all in doctors and medicines. Hence, to enre those and other diseases, there are a large number of doctors whom they call Arendiouane. . . . Some only judge of the evil, and that in divers ways, namely, by pyromaney, by hydromaney, necromaney, by feasts, dances, and songs; the others endeavor to cure the disease hy hlowing, by potions, and by other ridiculous tricks. . . But neither class do anything without generous presents and good pay.

There are here some soothsayers, whem they call also Arendiouane, and who undertake to cause the rain to fall or to cease, and to predict future events (cf. also Brébeuf, in La Jeune, Jes. Rel. x. 197-199; Raqueneau, in Laiemant, to xxxiii. 193-195, 221; Sayard, Hist. 534).

The Huron maintained the doctrine of the

The Huron maintained the doetrine of the multiple soul. According to Lo Jeune (Jcs. Rel. xvi. 191), the belief in son's profoundly affected tho Huron theories of dreams, ondonoc ('wishes of the soul'), disease, and medicine. Failure to dream was one of the signs that the soul had departed (Lo Jenne, Jes. Rel. xvi. 193). The wholo theory is set forth by Raguenean (in Lalemant, ib. xxxiii. 189-191); on the importance of dreams, see also Brébenf, in Lo Jeune, ib. x. 169-173; dn Peron, ib. xv. 177-179: on the ondonoc, dn Peron, 179-181; Lalemant, in Le Jenne, ib. xvii. 147-149, 153-159, 165-187; Chastelain, in Lo Jenne, ib. xix. 193.

Parents dreamed on behalf of their siek children (Brébeuf, 173). On one occasion a man dreamed that he was burned by the Iroquois. To avert this fate, he was somewhat severely burned as a fictitious captive by his compatriots at the regular burning place, after which he offered a dog to bo killed, roasted, and eaten (Lalemant, in Vimont, Jcs. Rel. xxiii. 171-173; ef. also Bressani, ic.

xxix. 19). Sometimes the dream led to obsceno rites (Sagard, Hist. 308 f.). After a propitious dream a feast was often given, for, according to Ragueneau (in Lalemant, ib. xxxiii. 195), 'they say that these gifts are given to compel the soul to keep its word, because they helieve that it is pleased at seeing this expression of satisfaction for the propitious dream, and that, consequently, it will set to work sooner to accomplish it. And, if they failed to do so, they think that that might be sufficient to prevent such a result, as if the indignant soul withdrew its words' (on feasts among the Huron, see especially Brebeut, in Le Jeune, ib. x. 175-185).

The Huron theory of medicine was because.

The Huron theory of medicine was based on tho belief that 'all remedies always infallibly havo their effect; if, then, the patient did not recover with a natural remedy, the malady was supernatural, and there was need of a supernatural and superstitious remedy (Bressani, Jes. Rel. xxxix. 25). According to Raguencau (in Le Jenne, ib.

XXXIII. 199),
'the Hurons recognize three kinds of diseases. Some are natural, and they cure these with natural remedies. Others, they believe, are caused by the soul of the sick person, which

dssires something; these they cure by obtaining for the soul what it desires. Finally, the others are diseases caused by a spell that some sorcerer has cast upon the sick person; these diseases are cured by withdrawing from the patient's body the spell that causes his sickness. This spell may be a knot of hair; a piece of a man's nail, or of an animal's claw; a piece of leather, or of bons; a leaf of a tree, some grains of sand, or other similar things.

Most sicknesses arose from unsatisfied soul-desires or from witchcraft (Ragueneau, 201-209, with the general procedure in such cases). The Huron sought baptism at first 'almost entirely as an aid to health' (Brébeuf, 13). A curious custom is recorded by Sagard (Hist. 313), who states that sometimes, either in consequence of a dream or at the bidding of the loki (medicine-man), the girls chose young men with whom they passed the night. In some instances steneh was used to drive away demons of disease (Le Jeune, Jes. Rel. xix. 71). If all clse failed, and there were many sick in the village, recourse was had to the loneuoyroya or ononharoia ('turning the brain upside down'), when the villagers turned everything topsyturvy, shouted, and ran about all night, seeking to expel the demons. They then thought of the first object that came into their minds and went from eabin to eabin demanding something, and receiving gifts until they obtained that of which they thought. All other presents were returned after a feast, ordinarily lasting three days; but, if they failed to secure the object desired, the persons thus disappointed thought that their death was near (Sagard, Voyage, 279-282, Hist. 674 f.; ef. Brébeuf, 175-177). The feast was also eelebrated every winter in honour of all the deities together (Lalemant, in Vimont, Jes. Rel. xxiii. 53). Frequently the games of crosse and 'dish' (a dish containing six plumstones, white on one side and black on the other, being dashed on the ground so as to eause the stones to jump out, the object being to throw all of one colour) were played as a cure for siekness (Brébeuf, 185-189).

Of ceremonial dances we have scant information, but we are told that children were not allowed to imitate them (Lalemant, in Le Jeune, Jes. Rel. xvii. 163).

The Huron believed in re-incarnation. This is in evidence in a case in which a sorecrer claimed to have been a demon living under the ground who, wishing to become a man, had entered the wound of a woman who, knowing she had not conceived in the normal way, caused herself to give birth prematurely (Le Mercier, in Le Jeune, Jes. Rel. xiii. 105-107). This belief seems also to have been extended to animals, for a Huron who lost a favourite dog during a bear-hunt lamented that a small bear had not been brought him to get the dog's name and take its place (ib. xiv. 35). In their views regarding the future life the Huron 'maks no mention either of punishment or reward. And so they do not make any distinction between the good and the bad, the virtuous and the vicious; and they honor equally the interment of both' (Brébeuf, in Lc Jeuns, Jes. Rel. viii. 121).

The Milky Way was called by the Huron 'the way of souls,' and the souls of dogs were also immortal, a group of stars near the Milky Way being known as 'the path of dogs' (Sagard, Voyage, 233, Dict. 21). It was possible, under certain circumstances, for the souls of the dead to be brought to the world of the living, and Huron folklore had at least one specimen of the Orpheus and Eurydice cycle (Brébeuf, in Le Jenne, Jes. Rel. x. 149-153).

LITERATURE.—This art. has intentionally been restricted to the purely pagan period of the Huron. For their history in the later epoch, see J. N. B. Hewitt, 'Huron,' in HAI (=50 Bull. BE, 1907-10) i. 584-591; for the history of Christian missions, A. B. Jones, 'Huron Indians,' in Cath. Encyc. vii. [1910] 565-583; a general sketch is given by A. Featherman, Aonco-Maranomians (=Social Hist. of the Races of Mankind, IN. i.), London, 1859, pp. 51-65; the most important sources are G. Sagard-Théodat, Grand Voyage du pays des Hurons, Paris,

1032, new ed., do. 1865, and Hist. du Canada, do. 1636, new ed., do. 1866 (in this art. citations from both works of Sagard are according to the first editions); Jesuit Relations and Allied Documents, ed. R. G. Thwaites, 73 vols., Clsveland, 1896-1901 (especially vols. viii., x., xvi., xxxii., xxxix.) See also P. D. Clarke, Origin and Traditional Hist. of the Wyandotts, Toronto, 1870; F. Martin, Hurons et Iroquois, Paris, 1877; F. Parkman, Jesuits in N. Amer. in the Seventeenth Cent., Boston, 1867, especially pp. xxiv-xlii (Parkman endeavours painfully to be just, but is bandicapped by utter inability to shars either the Indian or the Catholic point of view, or even the mental attituds of the period which he discusses); J. Indians (=24 RBEW (1007)), pp. 106-110, 241-243, 351, 409, 549, 588 t., 702, 721.

LOUIS H. GRAY.

HUSSITES .- The Hussites were the followers of John Hus, who, after the death of their leader, sought by force of arms to secure toleration for themselves in Bohemia. Thereafter, in the 15th and 16th centuries, they were divided into two sections, the one, as the Utraquists or Calixtines, forming a party within the Roman Catholic Church: the other, as the Bohemian Brethren, becoming an

independent religious community.

1. John Hus. — Jan Hus, the reformer of Bohemia, was born in the second half of the 14th eent. in the Bohemian village of Hussineez. The year and day Bohemian village of Hussineez. The year and day of his birth are unknown. As family names were not then in common use among the rural population of Bohemia, he styled himself, from the name of his native place, John of Hussineez, subsequently (from 1396) abbreviating the name to John Hus. The poverty of his parents compelled him to earn his livelihood as a chorister and sacristan. About 1385, having resolved to devote himself to a elerical eareer, he began his studies at Prague. In 1393 he graduated B.A.; in 1394, B.D.; and in 1396 M.A. In academical circles, moreover, he won a position of high respect and influence; in 1401 he became dean of the philosophical faculty, and in 1402-03 was rector of the University. From the time of his ordination to the priesthood in 1400 he also acted as preacher in the Bethlehem Church of Prague.

As a result of the marriage of Anne, the sister of Wenceslaus, King of Bohemia, with Richard II. of England (1382), an active intercourse sprang up between the two countries, and one result of this was that the works of Wyclif (q.v.) became known in Bohemia. Even as a student, Hus had become acquainted with Wyclif's philosophical writings, and had assimilated his doctrine of realism. Wyclif's theological writings, however, first reached Prague in 1401-02; they made a profound impression upon Hus, and incited him to work actively for the reforms demanded by the English writer. By his moral diatribes against the vices of the clergy, Hus incurred the hostility of Archbishop Sbinko, though, on the other hand, he still retained the favour of King Wenceslaus, and the more so as in the University the Bohemian 'nation,' through Hus's influence, maintained the neutrality enjoined by the king in the Papal schism (between Pope Gregory XII. and Pope Alexander v.), while the other nations, as also the Archbishop, remained faithful to Gregory XII. Hus, availing himself of the king's favour, induced him to alter the conditions of voting in the University in favour of the Bohemian nation, with the result-that the latter

secured three votes, and the other nations, combined, only one. This caused a large number of German teachers and students to withdraw from Prague and found a new University at Leipzig (1409). In this matter Hus acted not so much from racial antipathy to the Germans as from resentment against their fierce opposition to the Wyelistite doctrines which he advocated and re-Thereafter Pope Alexander v., garded as truth. to whom Archbishop Sbinko had now made his submission, issued, at the instance of Hus's enemies, a hull against Wyelif, enjoining that his writings should be burnt (1410). Hus protested, and, in spite of the Archbishop's prohibition, actually defended Wyclif in public discussions. The consequence was that Hus was excommunicated, and Prague laid under a Papal interdict—measures which failed, however, to achieve their object.

Then Pope John XXIII.'s bull of indulgence for a crusade against Ladislaus of Naples, the champion of Gregory XII. (1411), led to a division among Hus's own followers. Hus assailed the hull in trenchant sermons and disputations, while the theological faculty of the University, including many of his former adherents, defended it. The breach became wider and wider, and led to popular riots in Prague, so that at length the king, who was still on Hus's side, found it necessary to induce him, for the sake of peace, to leave Prague (1411). Hus did so; but the desired result did not ensue, for his continued activity in Southern Bohemia, where he devoted himself partly to composing polemical tractates in the castle of a patron, and partly to preaching to the people of the district, soon put him at the head of the popular movement.

In order to effect an adjustment between the contending parties, the Emperor Sigismund, as heir to the Bohemian throne, resolved to bring the matters at issue before the General Council summoned to meet at Constance on the 1st of November 1414. Hus was quite prepared to attend the Council, but only as one who should be permitted in free discussion to try to win the fathers to the side of the Wyelifite teaching, and not as an accused person requiring to vindicate his actions. After prolonged negotiations with Sigismund the latter promised to use his Imperial authority to obtain for Hus this free and secure position in the Council. It was as bearing this sense that Hus and the entire Bohemian people regarded the Emperor's safe-conduct, which in its actual terms, however, was no more than a passport. Sigismund himself certainly intended it as a real safe-conduct; for, when by a base betrayal Hus was apprehended in Constance on the 28th November, the Emperor was so enraged that he threatened to leave the Council. Nevertheless, he at length allowed the Council to institute a prosecution for heresy against Hus, and was able to secure only a single mitigation in the latter's favour, viz. that—contrary to Canon Law-the accused heretic should be permitted to defend himself in open court. ether respects the case took the usual course. the prosceution did not undertake to confute the alleged errors which Hus had taken from Wyclif's writings, and as Hus therefore unconditionally refused to recant, he was condemned to death by burning. He died at the stake on the 6th of July 1415, steadfast under loug-protracted agony, and

Hus was a follower of Wyclif, and made no higher claim. His ideas of Church reform are all derived from Wyclif, whose writings he often reproduces verbally in his own tractates. His position is a distinct one only in so far as his proposals were less drastic than those of the English reformer; and he still adhered to many doctrines and practices of the Church which the latter rejected, as,

e.g., the Seven Saeraments, Transnbstantiation, Masses for the Dead, Intercession of the Saints, Purgatory, the Merit of Works, and others. From Wyclif he received, above all, the principle that Holy Seripture is the supreme standard in matters of faith, and that the authority of the Church must be subordinate thereto. For Hus, Christ was the Head of the Church, and the Church was not the hierarchy, but the community of the elect. These principles he proclaimed to the people with glowing eloquence, and so prepared them to put forward resolute demands for the abolition of various ecclesiastical abuses long felt to be tyrannical.

astical abuses long felt to be tyrannical.

Literature.—The sources for the life of Hus are collected in Documenta Magistri Joannis Hus, ed. F. Palacky, Prague, 1869. His writings—(a) Latin: Joannis Hus et Hieronymi Pragensis historia

fort, 1715 [unsatisfa ny Ceské, 3 vols., Prague, 1865-68. A new ed. of the Lat. and Czech works, by W. Flajshans, is in course of publication (Prague, 1903 fl.). Books dealing with the subject: G. V. Lechler, Joh. Hus, Halle, 1890; K. Müller, 'König Sigismunds Geleit für Hus '(Hist. Vierteljahrsschrift, 1893); J. Loserth, Wiclif and Hus, Eng. tr., London, 1884; F. H. H. V. Lützow, The Life and Times of Master John Hus, do. 1909.

2. The Hussites.—The treacherous arrest of Hus his condemnation as a heretic, and his exe-

Hus, his condemnation as a heretic, and his exeeution were felt by the Bohemians as an indignity to their nation, and, when Sigismund began a savage persecution of Hus's followers in Boliemia, the people rose in revolt (1419). It is worthy of note that from the first the device under which the Hussites fought and conquered was the chalice, though Hus himself had never demanded that the laity should partake of the cup in the Lord's Supper, but had at most acquieseed when his supper, but had at most acquireseed when his imprisonment in Constance. In point of fact, as the earlier Waldenses frequently joined hands with the Hussites, inspiring them with fresh vitality, the claims of a large section of Hus's followers. went far beyond what he himself had asked for. This is true especially of the more extreme party, the Taborites—so called from Tabor, the name of the town which they founded in the district of Southern Bohemia where Hus had preached to the people during his absence from Prague. The Tahorites were the people's party among the Hussites—the most uncompromising Wyeliffites, whose position was at first defined in part by certain eschatological heliefs. Their leader was the brilliant general, Jan Troeznov of Zizka.

The more moderate party were designated Calixtines or Utraquists, their chief demand being that the laity should have the cup (calix)—'communio sub utraque specie.' They were sometimes called 'Praguers,' from the fact that they were drawn mainly from the academical and civilian circles of Prague. Their leader and counsellor was Jan Rokyczana, a Magister of Prague University, who was made a bishop by his party in 1435, though his appointment nover received Papal rati-The Utraquists put forward their distinctive claims in the Fonr Articles of Prague, as follows: (1) unrestricted preaching of God's word; (2) communion in both kinds; (3) the apostolie poverty and moral purity of the elergy; and (4) Church discipline. In spite of the numerous differences between the two sections, they always combined in making war upon their common enemy. Having repulsed several German crusading armies (1420-27), they took the aggressive, and, by ravaging the districts adjacent to Bohemia, songht to compel the German princes to abandon their Pro-Roman policy of oppressing and exter-minating the Hussites. They were so far successful in these tactics that the Council of Basel entered into negotiations with them, and at length, in the Compactata of Basel (1433), granted them the four conditions just noted. But by taking

this step the Conncil managed at the same time to bring about an irreconcilable antagonism between the two Hussite parties, as the Taborites absolutely refused to be satisfied with such trifling concessions. War now broke out between the two sections, and the united forces of the Calixtines sections, and the united forces of the Calixtines and the Catholics gained a decisive victory over the Taborites at Lipan on 30th May 1434. It soon became apparent, however, that Rome was bent npon revoking the concessions it had made. It did not adhere to the Compactata; in fact, Pope Pius II. formally cancelled them in 1462. Still, they remained actually in force, for the Bohemian Diet had made them the law of the land, and the Robemian throne was pledged to maintain them Boliemian throne was pledged to maintain them. But in 1567 the Diet itself repealed them, as Utraquism was by that time in a state of ntter dissolution. From the time of Luther's entrance upon the scene they had in ever-increasing numbers allied themselves with the reforming movement directed by him. The Taborites as a party were never of any consequence after the defeat of 1434; a section of what still remained of them attached itself to the Bohemian Brethren.

LYERAFURE.—C. Hößer, Geschichtsschreiber der husitischen Bewegung, i.-iii. (Fontes rerum austriacarum, 'Scriptores,' ii. vi. and vii. [Vienna, 1856-66]); J. Goll, Fontes rerum bohemicarum, v. (Prague, 1893); J. Loserth, Beiträge zur Gesch. d. husit. Bewegung, i.-v. (Vienna, 1877ff.); F. Palacky, Gesch. Böhmens, iii.-v. (Prague, 1845-67).

The Bohemian and Moravian Brethren.-Hussite wars, with their meagre results, left behind in Bohemia a general dissolution of ecclesiastical order and a spirit of pessimism. In all parts of the country there arose small communities, attaching themselves to individual priests, and the more bigoted circles of these communities often sought to effect reforms in strange ways, while their members, like the older Taborites, spoke of one another as brothers and sisters. But Rokyczana, the leader of the Utraquists, and the Arch-bishop chosen by themselves, was dissatisfied with what had been won, and in his sermons vigorously denounced the moral and religious defects of the Roman Church, as well as of his own party, and made a powerful impression upon a little circle of religiously disposed persons whose leader and head was Brother Gregory. When, however, this circle called upon Rokyczana to translate his strictures into action, he declined to do so. Then, after appealing also to Peter of Cheltshic—a thoroughgoing partisan of Wyelif, and the leader of one of the small communities above most to the small communities are the small communities above most to the small communities are the small communities above most to the small communities are the small of the small communities above mentioned—for practical support of their designs, but again in vain, they withdrew, about 1457, to the east of Bohemia, to the solitudes of Kunwald, and there formed, not another monastic order, but a community like the Waldenses (q.v.) or the Friends of God (q.v.). Their practice was to send ont itinerant preachers in pairs, they had a communal organization and communal law, they divided their members into beginners, proficients, and the perfect, as in the *Theologia Germanica* (ed. Pfeiffer, tr. S. Winkworth, 2nd ed., London, 1854, ch. 14). In 1467 this community, which meanwhile had gained accessions in several other districts of Bohemia and Moravia, dissociated itself completely from the Utraquist Church by adopting the policy of selecting and ordaining its priests from its own ranks, subsequently procuring for them a second ordination at the hands of a Waldensian bishop named Stephen, resident in Austria. assumed the name jednota bratrská (Czech 'society of brethren'), afterwards Latinized as Unitas Fratrum; their opponents, however, called them Waldenses, or, more frequently, Pikhards (Beghards). As they had now broken off relations with the Church, they proceeded to withdraw from the 1575, the evangelical States adopted the conjugate world. Military service, the taking of oaths, the Bohemica, in the framing of which the representa-

delivering of penal judgments, and, accordingly, all participation in the administration of State or Church, were forbidden to their members. They likewise loathed science, the sole function of which, they said, was to justify every error by Scripture. But their snpreme concern was practical Christianity—purity of conduct, the permeation of social life in their communities by a disinterested and self-denying love to one's neighborr, the fulfilling of the law of Christ according to Gal 62; hence, too, they sometimes called themselves 'Fratres legis Christi.' In the succeeding decades their estrangement from worldly interests became gradnally less rigorous—a development which was not effected without some internal conflicts, and resulted in the severance of the 'Little Sect' (also called Amosites, after their leader, Amos of Wod.

nian).

Hitherto the Brethren had found their standard String the Brethren had found their Sumularu of doctrine in the writings of Brother Gregory (Seven Letters to Rokyczana, 1468-70, Tractate on the Holy Church, 1470, Treatise on the Narrow Way of Christ, 1470, Of Two Kinds of Work—that founded on the Sand and on the Rock, probably 1471, and others); but from about the year 1490 the spiritnal leadership of the sect was assumed by Brother Lncas, a B.A. of Prague University, who, with a reverent regard for traditional nsage, finally settled its constitution, its order of worship, its social organization, and its doctrine. His numerous works include, besides theological treatises, the first hymn-book of the Brethren, the first catechism for the various grades of the community, full official instructions for their priests, an order of ritnal, etc. It was this effective organization that enabled the community to survive the namerous persecutions directed against them, and even to emerge therefrom with renewed strength. Their adversaries had been successful in having a decree adopted in the national statute-book, and thus made a law of the land, to the effect that the Unitas Fratrum, with its congregations and assemblies, should not be tolerated in Bohemia (1508). This law nominally remained in force for a century (till 1609), but the nobles had sufficient power to be able for the most part to protect the communities on their own estates.

Very soon after the rise of Luther, the Utraquist Church in Bohemia entered into negotiations with him, and upon both sides there was a desire for closer union. This fact induced the Brethren also to send ambassadors to Luther; but it was only after the death of Lncas (1528) that the relations between them and the German reformer became really intimate, and that their leading men, such as Johann Horn and Johann Augusta, songht to meet him half-way by adopting his doctrines in their Confession. (Their 'Statement of Faith,' with a preface by Luther, appeared in 1533.)

In consequence of the defeat suffered by the Boliemian nobles in their revolt against Ferdinand I. in 1547, the latter became powerful enough to set in 1047, the latter became powerful enough to set in operation once more the old laws against the Brethren. The large majority of the Brethren were thus forced to withdraw from Bohemia, and sought refuge in Poland. They were, however, permitted to remain in Moravia, where, indeed, they had their chief settlements, as also the administrative centre of their Church. The need of a legally secure position, such as the German Protestants secure position, such as the German Protestants had attained in 1555 by the 'Religious Peace' of Augsburg, led the Brethren-under the guidance of Blahoslav—and also the Utraquists, who in ever larger numbers had become Lntherans, to engage in prolonged ecclesiastical negotiations with Maximilian II. In the course of these negotiations, in 1575, the evangelical States adopted the Confession

tives of the Brethren had taken part. But it was not till 1609, when the Emperor Rudolf II. issned an Imperial charter granting religious liberty to the adherents of that Confession, that the Brethren in Bohemia united with the evangelicals, stipulating, however, that their own constitution and order of worship should remain as before. In Moravia and Poland, on the other hand, they retained their existing Confession. Further simplification of this necessarily transitional state of affairs was prevented by the unfortunate issue of the Bohemian revolt in 1618, as, in consequence of the defeat of the evangelicals in the battle at the White Mountain, not only the Unity, but the entire evangelical Church in Bohcmia and Moravia, was destroyed. Numbers of the defeated party fled to Hungary, Poland, and the neighbouring districts of Saxony; others remained where they were, became Catholics in external things, and, in hope of better days, tried to support one another secretly in the evangelical faith. But, as the Catholic reaction developed more and more vigorously in Moravia, many of their descendants migrated to Saxony about the beginning of the 18th cent., and there founded the settlement of Herrnhut. The Unity of the Brethren, which they reconstituted in alliance with Count Zinzendorf (see MORAVIANS), was joined by numerous exiles from Bohemia. The remnants of the Unity in Poland —their principal community was at Lissa, from which as a centre their bisnop, John Amos Komensky (Comenius), developed his varied activities—also yielded to the ever-expanding power of Catholicism.

J. T. MÜLLER.

HUTCHINSONIANS.—I. Followers of John Hutchinson (1674-1737), in his reconciliation of science with the OT. Thomas Burnet had published geologic theories, relating them to Genesis; Woodward had followed with a Natural History of the Earth, identifying fossils as remains of living plants and animals, insisting on the earth's strata having been deposited from water, at the Noachian Deluge; and Samuel Clarke then had translated a treatise on Physics by a Cartesian, to pave the way for the study of Newton's Principia. Hutchinson was one of many correspondents with Woodward, and in his capacity as land-steward had great opportunities of augmenting Woodward's collection of fossils, ultimately bequeathed to Cambridge. Hutchinson hoped that Woodward in tended to publish a book elucidating Genesis; and, when disappointed, he decided to do so himself, and so began the study of Hebrew. He followed Simon in discarding everything but the consonants, and wrote on the perfection of the Hebrew text when freed from Jewish forgeries. His first publication was an attack on the scientists named, entitled Moses' Principia (1724); a second part turned on Clarke and his doctrine of the Trinity, expounding a rival theory of the three natural agents—air or fire, light, spirit. He had now adopted Bampfield's view, that all useful sciences and profitable arts were implicit in the Bible, and he deduced the true doctrine of gravity from the chcrubim, the true doctrine of the natural agents and the Trinity from Jachin and Boaz. Other topics dealt with were human physiology, the nature of body and soul, instinct. When, however, Hutchinson found Tindal arguing from the samo premisses that Christianity is as old as the Creation, he changed front and stigmatized Natural Religion as the religion of Satan, claiming that the use of reason was recovered only by the data of Christianity. was recovered only by the data of Christianity.

His teachings attracted attention in educated circles; Lord Advocate Forbes adopted his princi-ples at once. Parkhurst followed him in emphasizing the consonantal Hebrew text, as his Lexicon attests. George Horne for the same reason opposed Kennicott's scheme of collating Hebrew MSS. He also believed that Hutchinson had excolled Newton in his understanding of the physical causes moving the world, and he aided William Jones of Nayland in a reply to Clayton's Essay on Spirit. Jones twice elaborated a theory of the Trinity, and to the end of the century developed his physical teachings. No later adherent made any mark.

LITERATURE.—Works, complete ed. R. Spearman and J. Bata, 12 vols., London, 1878; Abstract of these, do. 1753; Supplement, with Life, ed. Spearman, do. 1765.

2. The name 'Hutchinsonians' is sometimes applied to the followers of Anne Hutchinson (1590–160). 1643), in her pleas for experimental religion and freedom of conscience. Reaching Boston in 1634, she found the civil suffrage limited to church members, with an oligarchy of ministers and elders in power; most of the settlers were Puritans, so intolerant that they shipped back a few who desired to use the Prayer-Book. She herself, though an admirer of John Cotton, was not at first admitted to membership in his church, which also silenced all women members; she therefore began teaching in meetings of her own. These were soon attended by men, the most prominent being young Henry Vane, son of a Privy Councillor. The Company forbade the organization of new churches without the consent of the magistrates and of the elders in existing churches; the democrats replied by putting forward Mrs. Hutchinson's brother-in-law to be assistant to Cotton, and electing Vane governor (1636). She then attacked the oligarchy as being under a covenant of works, whereas she and Cotton and most of the Boston church were under a covenant of grace, enjoying the peculiar indwelling of the Spirit. This led to all the elders in the colony assembling and con-demning 82 opinions which they attributed to her or derived from her teaching; these they afterwards published in England to justify them-selves, labelling them Antinomian, Familist, and Libertine. Cotton recanted, and at the next elections (1637) Vane was defeated, and returned to wage a better fight in England for toleration. His voluminous and obscure religious works are indebted to Boelime as much as to Mrs. Hutchinson. Other sympathizers migrated to the Connecticut River, and discarded all religious tests for civil membership. She and other adherents were banished; they settled in what they re-named the Isle of Rhodes (now Rhode Island), where her follower William Coddington and her hasband were the carliest rulers, and the island was soon famed as the home of religions liberty.

W. T. WHITLEY. HYKSOS .- 'Hyksos' is the title given to a race of invaders, apparently of Semitic origin, who con-quered Egypt during the time of confusion and weak rule which followed the close of the XIIth and ended with the rise of the XVIIIth dynasty. The chief authority for the facts of the Hykson conquest and domination is a fragment of the history of Manetho quoted by Josephus (c. Apion. Its statements may be summarized as 14). follows:

follows:

In the reign of a king named Timaios the gods were with Egypt, and there came up from the East a race of invoke men who conquered the country without a battle. They treated the native population with great cruelty, burned the cities, and demolished the temples. Thereafter they made one Salative their king, and he established a great fortified camp at a place called Avaris (Réchard) on an arm of the Nile near Euleris. Here he kept a garrison of 240,000 men. The Hylmos dominations

Six kings are named-Salatis, 19 tion lasted for 511 years. years; Beon, 44; Apakhnas, 36+; Apophis, 61; Iannas, 50+; Assis, 49+.1 Eventually the kings of the Thebaid made insurrection against the oppressors, and under a king named Mistragmouthosis drove them into Avaris, and blockaded them there. Finally an arrangement was reached whereby the Hykses were allowed to downt from Event into Straic when the there. Finally an arrangement was reached whereby the Hyksos were allowed to depart from Egypt into Syria, where they built the fortress called Jerusalem. They were called Hyksos, or 'Shepherd Kings,' becauss Hyk in the sacred language of Egypt signifies a 'king,' and sos in the vulgar dialect a 'shepherd.' Some say that they were Arabians.

This is history of a somewhat curious type, and it is difficult to car, here were here it is not a somewhat the same than the same tha

it is difficult to say how much reliance is to be placed on it. However, it is certain from native records that there was such an invasion and domination. An inscription of Queen Hatshepsut, dating from only two generations after the expulsion

of the invaders, says:
'I have restored that which was ruins, I have raised up that which was unfinished Since the Asiatics were in the midst of Avaris of the Northland.

And the barbarians wers in the midst of them, Overthrowing that which had been made, While they ruled in ignorance of Ra.'

The inscription of Aahmes, son of Abana, a naval officer of El-Kab under Aahmes I., mentions the prolonged siege of Avaris. Further, a folktale, preserved in the First Sallier Papyrus, records how one of the Hyksos kings, Apcha, desired to impose the worship of Sutckh, his god, upon king Sequener-Rā of Thebes. He therefore sent a message to him complaining that his sleep at Tanis was broken by the plunging of the hippopotami in the sacred lake at Thebes, and requesting that the offending animals should be externinated. If Segenen-Ra could make no answer to this amazing request, he was to give up his own god and worship Sutekh. If, on the other hand, he did what Apepa desired, the latter would worship Amen-Rā. This narrative, which shows Apopa most barefacedly manufacturing a casus belli, is obviously a romance fabricated to account for the outbreak of war between the Hyksos and the princes of the Thebaid. The fact, however, of Hyksos dominance is manifest in the whole tone of the story.

As to the duration of the period of oppression tere is no certainty. Manetho's six named there is no certainty. kings account for 260 years, and he states that these were the first kings, leaving others unnamed to fill up the 511 years. Petrie accepts the estimate of Manetho, allowing a century for the period of invasion and gradual conquest - 260 years of more or less stable rule under the named kings, and the remaining century and a half for the struggle ending in the expulsion of the invaders. Breasted, on the other hand, who, following Meyer, allows only 208 years for the dynasties from the XIIth to the XVIIIth, maintains that 100 years is ample for the whole Hyksos period. This seems a hard saying in face of the precise

and not at all impossible figures given by Manetho 1 for these names Syncslus (p. 104) and Africanus (apud Syncellus, p. 61) present the following variants: Silités or Saîtés; Baion or Bhōn; Pakhnan; Aphōphis or Aphōbis; Sethōs; Kērtōs; and Asēth. Africanus omits the last two names given by Josephus, and inserts after Apakhnas the kings Staan and Arkhlés, with reigns of 50 and 49 years respectively. For the same last two names Syncellus substitutes Sethōs (50 years), Kērtōs (29 years), and Asēth (20 years). Budge (Hist. iii. 146, b. 1) plausibly suggests that the Salités of Josephus represents Heb. D'); 'governor.'

for the reigns of his six kings. Material relica of the Hyksos kings are scanty, as was to be expected. Two Apepas can be identified, the first of whom has left an inscription relating to the dedication of pillars and doors at the temple of Bubastis, while the Rhind Mathematical Papyrus claims to have been written in the thirty-third

year of his reign.

The second Apepa has left an altar, now at Cairo, dedicated as follows: 'He made it as his monument for his father Sutekh, Lord of Avaris, when Sutekh set all lands under the king's feet. One or other of these Apepas may be the 'Apophis' of the Manethonian fragment. More important of the Manethonian fragment. are the relics of Khyan, who may, perhaps, be identified with the 'Iannas' of the fragment. Traces of his rule have been found in both Upper and Lower Egypt, while a granite lion bearing his cartouche was found at Baghdad, and an alabastron with his name was discovered by Evans at Knossos. One of the titles used by Khyan upon his scarabs and cylinders is anq adebu, 'embracer of the lands.' These facts have inspired Breasted's imagination to the reconstruction of a vanished Hyksos empire, embracing all the territory from the Euphrates to the first cataract of the Nile, and governed during part of its history by a ruler of the Jacob tribes of Israel in the person of that Pharaoh whose scarabs give his name as Jacob-her or Jacob-el. The foundation seems rather slight for such a superstructure.

As to the name of the invaders, the first syllable is obviously the Egyptian Hcq, 'ruler,' the second may conceivably be Shasu, which was the generic Egyptian title for the pastoral races of the Eastern deserts. Khyan names himself Heq Setu, 'chief of the deserts,' and perhaps the derivation may lie here. But, on the whole, Manetho's derivation seems to be not far astray. There is no portrait evidence existing as to their race-type, the sphinxes and other statues exhibiting a peculiar type of face which were formerly assigned to them being now considered to be older; but there is no reason to doubt the tradition that they were of Arabian, or at least of Semitic, origin. Their existing relics suggest that, while the beginning of their rule may have been marked by harshness and oppression, the tradition of their unbounded cruelty and destructiveness is exaggerated. As in so many other cases, the land conquered its conquerors, and the Apepas and Khyans became in all essentials Egyptian Pharaohs. Their influence upon the native Egyptian race was probably beneficial, and its results may be traced in the wider outlook and renewed vigour of the nation under the XVIIIth dynasty. In all probability the introduction of the horse and chariot as instruments of warfare was due to them, and may have been the chief cause of their easy conquest of the land.
